

High-reliability discrete products  
and engineering services since 1977

### FEATURES

- Available as "HR" (high reliability) screened per MIL-PRF-19500, JANTX level. Add "HR" suffix to base part number.
- Available as non-RoHS (Sn/Pb plating), standard, and as RoHS by adding "-PBF" suffix. Part numbers listed indicate a tolerance of  $\pm 20\%$  with guaranteed limits on only, VZ, IR and VF.
- Devices with guaranteed limits on all six parameters are indicated by suffix A for  $\pm 10\%$  tolerance, suffix B for a  $\pm 5\%$  tolerance, suffix C for a 2% tolerance and suffix D for a 1% tolerance.

NOTE 1: The electrical characteristics are measured after allowing the device to stabilize for 20 seconds when mounted with a 3/8" minimum lead length from the case.

NOTE 2: The zener impedance is derived from the 60HZ ac voltage, which results when an ac current having an r.m.s. value equal to 10% of the DC zener current ( $I_{ZT}$  or  $I_{ZK}$ ) is superimposed on  $I_{ZT}$  or  $I_{ZK}$ . Zener impedance is measured at two points to insure a sharp knee on the breakdown curve, thereby eliminating unstable units.

NOTE 3: Temperature coefficient ( $\alpha_{VZ}$ ). Test conditions for temperature coefficient are as follows:

a.  $I_{ZT} = 7.5 \text{ mA}$ ,  $T_1 = 25^{\circ}C$ ,  
 $T_2 = 125^{\circ}C$  (1N5221A, thru 1N5242A, B.)

b.  $I_{ZT} = \text{Rated } I_{ZT}$ ,  $T_1 = 25^{\circ}C$ ,  
 $T_2 = 125^{\circ}C$  (1N5243A, B thru 1N5281A, B.)

Device to be temperature stabilized with current applied prior to reading breakdown voltage at the specified ambient temperature.
