

**5-CHANNEL MOTOR DRIVER FOR DVD PLAYER****AM5680****General Description**

The AM5680 is a five-channel BTL driver IC for driving motors and actuators used in DVD player. It contains two independent precise voltage regulators with adjustable range from 1.5V to 4V. Furthermore, an under voltage detector is provided for system reset.

The AM5680 is available in standard HSOP-28 package.

Features

- 4 channels DC Motor BTL Driver
- 1 channel Forward/Reverse Control DC Motor BTL Driver
- Built-in Voltage Detector for System Reset
- Built-in Level Shift Circuit
- Built-in Mute Mode
- Built-in Thermal Shutdown Circuit
- Two Built-in Regulator Controllers

Application

- DVD Player

**5-CHANNEL MOTOR DRIVER FOR DVD PLAYER****AM5680****Pin Description**

Pin Number	Pin Name	Function
1	VINFC	Input for focus driver
2	TRB_1	Regulator 1 driver output
3	REGO2	Regulator 2 feedback input
4	VINSL	Input for the sled driver
5	REGO1	Regulator 1 feedback input
6	FWD	Tray driver forward input
7	REV	Tray driver reverse input
8	VCC1	V _{CC} for pre-drive block and power block of sled and tray
9	VOTR-	Tray driver output (-)
10	VOTR+	Tray driver output (+)
11	VOSL+	Sled driver output (+)
12	VOSL-	Sled driver output (-)
13	VOFC-	Focus driver output (-)
14	VOFC+	Focus driver output (+)
15	VOTK+	Tracking driver output (+)
16	VOTK-	Tracking driver output (-)
17	VOSP+	Spindle driver output (+)
18	VOSP-	Spindle driver output (-)
19	VCC2	V _{CC} for power block of spindle, tracking and focus
20	VCCD	Input for voltage detection
21	VCTL	Speed control input of tray driver
22	GND	Ground
23	VINSP	Input for spindle driver
24	RESET	Output for system reset
25	TRB_2	Regulator 2 driver output
26	VINTK	Input for tracking driver
27	BIAS	Input for reference voltage
28	MUTE	Input for mute control

Note 1: Symbols of + and - (output of drivers) mean polarity with respect to input pin.
(For example, if voltage of pin 1 is high, pin 14 is high and pin 13 is low.)

Typical Application

**5-CHANNEL MOTOR DRIVER FOR DVD PLAYER****AM5680****Application Information**

1. The built-in thermal shutdown circuit mutes the output current when the chip temperature reaches 175°C (Typ). The hysteresis is set to 30°C (Typ), so the circuit will start up again when the chip temperature falls to 145°C (Typ).

2. In case mute pin voltage is under 0.5V or this pin is not connected, output current is muted (except for tray motor driver). Mute pin voltage should be more than 2.0V for normal application.

3. BIAS pin (pin 27) should be pulled up to more than 1.2V. In case the bias pin voltage is pulled down below 0.9V (Typ), the output current is muted.

4. Insert the bypass capacitor (about 0.1μF) between VCC1,2 pin and GND pin as close as possible to this chip.

5. Heat dissipation fins are attached to the GND on the inside of the package. Make sure to connect them to the external GND.

6. Tray driver logic input:

FWD (pin6)	REV (pin7)	VOTR+ (pin10)	VOTR- (pin9)	Function
L	L	OPEN	OPEN	Open mode
L	H	L	H	Reverse mode
H	L	H	L	Forward mode
H	H	L	L	Brake mode

Input circuit of pins 6 and 7 is designed to avoid simultaneous activation of upper and lower output tray; however, in order to improve reliability, apply motor forward/reverse input once through open mode. Time period for open is recommended to be longer than 10msec.

"H" side output voltage on output pins (VOTR+ or VOTR-) varies depending on output control terminal for tray (pin 21). "H" side output voltage is set to three times (9.2dB Typ) the voltage of VCTL (pin 21). And, "L" side output voltage is equal to output saturation voltage.

7. For 3.3V I/O system, if voltage applied to VCCD (pin 20) is lower than detector threshold voltage (Typ 2.9V), RESET pin (pin 24) will generate a L level as reset signal. Once the VCCD comes over 3.1V, RESET pin will change to H level immediately.
