

Features

- Over Voltage Protection and Lock Out for 3.3 V, 5 V, and 12 V
- Under Voltage Protection and Lock Out for 3.3 V and 5 V
- Fault Protection Output with Open Drain Output Stage
- Open Drain Power Good Output Signal for Power Good Input, 3.3 V and 5 V
- 300 ms Power Good Delay
- 2.36 ms $\overline{\text{PSON}}$ Control to $\overline{\text{FPO}}$ Turn-Off Delay
- 38 ms $\overline{\text{PSON}}$ Control Debounce
- 75 ms Delay for 3.3V and 5V Under Voltage Protection
- 73 μs Width Noise Deglitches
- Wide Power Supply Voltage Range from 4 V to 15 V
- Intelligent Under Voltage Protection to Prevent Instantaneously AC Power Black Out

General Description

The APW1681 is designed to minimize the external components of personal-computer switching power supply systems. It provides protection circuits, power good indicator, fault protection output FPO and PSON control.

OVP (over voltage protection) monitors 3.3V, 5 V, and 12 V (12 V OV detects via V_{CC} terminal). UVP (under voltage protection) monitors 3.3V and 5V. When an OV or UV condition is detected, the PGO (power good output) is set to low and FPO is latched to high. PSON from low to high resets the protection latch. There is a 2.36ms turn-off delay from PSON to FPO. There is no delay during turn on.

Power good feature monitors PGI, 3.3V and 5V under voltages, and issues a power good signal when they are ready.
