

**1 GHz capable,
3 W carrying power
(at 1 GHz), 50Ω impedance
and 2 Form C relays**

RA RELAYS (ARA)

RoHS compliant

Protective construction: Sealed type

FEATURES

1. High frequency characteristics (Impedance 50Ω, ~1.0GHz)

- Insertion loss; Max. 0.3dB
- Isolation; Min. 20dB (Between open contacts)
Min. 30dB (Between contact sets)
- V.S.W.R.; Max. 1.2

2. Surface mount terminal

This relay is a surface-mounted model with excellent high-frequency properties. In addition, it can use a microstrip line in the base circuit design which spares the labor of machining the base.

3. Low profile small type

9.7(W)×14.7(L)×5.9(H) mm
.382(W)×.579(L)×.232(H) inch

4. High sensitivity: 140 mW nominal operating power (Single side stable, 2 coil latching)

5. High contact reliability

Electrical life: Min. 10⁷ (10mA 10V DC)

TYPICAL APPLICATIONS

• **Measurement market**

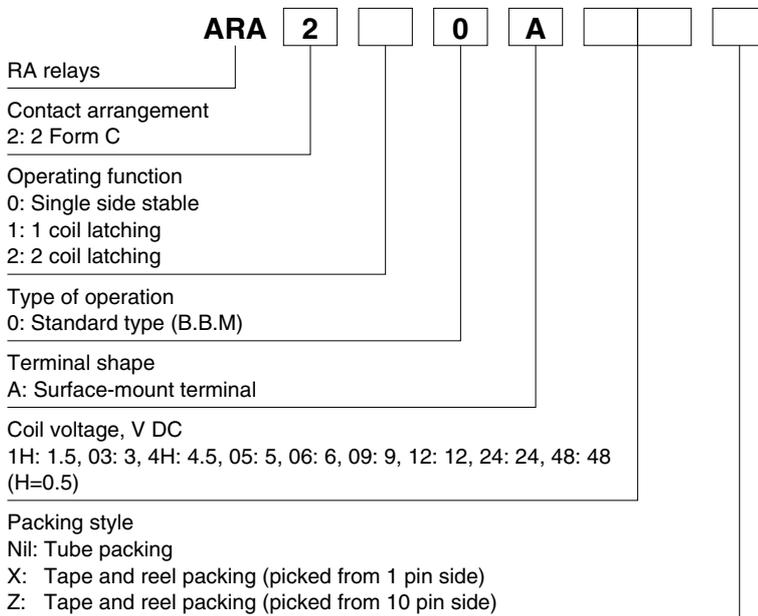

Oscilloscope attenuator circuit

• **Communication market**

Antenna switching, All types of wireless devices

NOTES

1. Coil operating power

Pure DC current should be applied to the coil. The wave form should be rectangular. If it includes ripple, the ripple factor should be less than 5%. However, check it with the actual circuit since the characteristics may be slightly different. The nominal operating voltage should be applied to the coil for more than 10 ms to set/reset the latching type relay.

2. Coil connection

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

3. External magnetic field

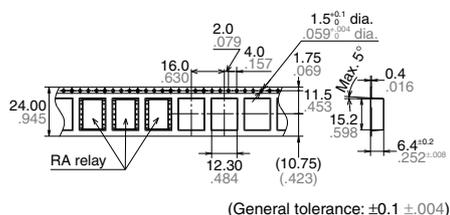

Since RA relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that condition.

4. Cleaning

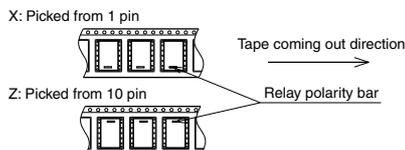

For automatic cleaning, the boiling method is recommended. Avoid ultrasonic cleaning which subjects the relays to high frequency vibrations, which may cause the contacts to stick. It is recommended that alcoholic solvents be used.

5. Tape and reel packing

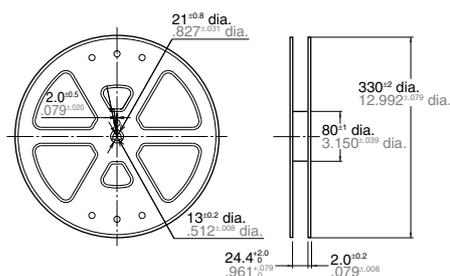

1) Tape dimensions

2) X type, Z type

3) Dimensions of plastic reel

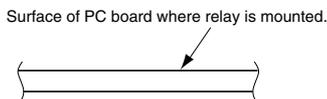

6. Soldering

Manual soldering shall be performed under following condition. Tip temperature: 280°C to 300°C 536°F to 572°F. Wattage: 30 to 60W

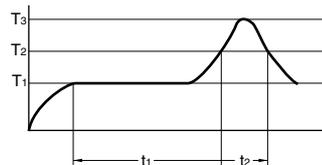

Soldering time: within 5s

In case of automatic soldering, the following conditions should be observed

1) Position of measuring temperature

2) IR (infrared reflow) soldering method

$T_1 = 150 \text{ to } 180^\circ\text{C } 302 \text{ to } 356^\circ\text{F}$
 $T_2 = 230^\circ\text{C } 446^\circ\text{F and higher}$
 $T_3 = \text{Within } 250^\circ\text{C } 482^\circ\text{F}$
 $t_1 = 60 \text{ to } 120 \text{ sec.}$
 $t_2 = \text{Within } 30 \text{ sec.}$

Temperature rise of relay itself may vary according to the mounting level or the heating method of reflow equipment. Therefore, please set the temperature of soldering portion of relay terminal and the top surface of the relay case not to exceed the above mentioned soldering condition.

It is recommended to check the temperature rise of each portion under actual mounting condition before use.

The soldering earth shall be performed by manual soldering.

7. Conditions for operation, transport and storage conditions

1) Ambient temperature, humidity, and atmospheric pressure during usage, transport, and storage of the relay:

(1) Temperature:

–40 to +70°C –40 to +158°F

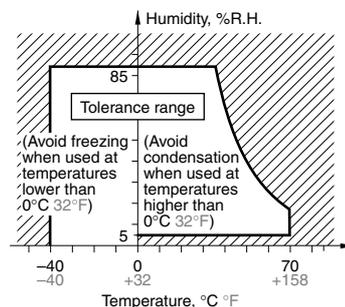

(2) Humidity: 5 to 85% RH

(Avoid freezing and condensation.)

The humidity range varies with the temperature. Use within the range indicated in the graph below.

(3) Atmospheric pressure: 86 to 106 kPa

Temperature and humidity range for usage, transport, and storage:

2) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.

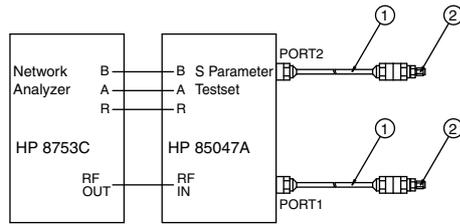

3) Freezing

Condensation or other moisture may freeze on the relay when the temperature is lower than 0°C 32°F. This causes problems such as sticking of movable parts or operational time lags.

4) Low temperature, low humidity environments

The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

8. Measuring method (50Ω type)

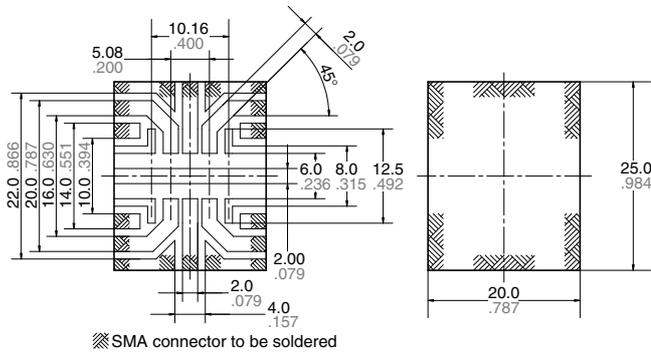

Connect connectors 1 and 2 respectively to PORT1 and PORT2. Perform calibration using the 3.5 mm .138 inch calibration kit (HP85033C).

No.	Product name	Contents
1	HP 11857D	7mm Test port, Extension cable, (APC7connector)
2	HP 11533A	Adapter, APC7-SMA (Male)

After calibration, connect the D.U.T board and measure.

D.U.T. board

Dimensions (mm inch)

Material; Glass PTFE

R-4737 (manufactured by our company)

Board thickness; $t = 0.8\text{mm}$.031inch

Copper plating thickness; $18\mu\text{m}$ (Double sided)

Connector (SMA type)

Product name; R125 403 (RADIALL)

Insertion loss compensation; The insertion loss of relay itself is given by subtracting the insertion loss of short-circuit the Com and the NC (or NO). (signal path and two connectors)
