

ATS477

Single Phase Hall Effect Latch

■ Features

- On-chip Hall sensor
- Bi-direction H type output drivers for single coil
- Internal bandgap regulator allows temperature compensated operations and a wide operating voltage range
- High output sinking capability up to 250mA
- Operating voltage: 4V~20V
- Low output switching current noise
- Build-in shunt Zener protection for output driver
- SOP-7L provide FG output pin
- Package: SIP-4L and SOP-7L

■ Applications

- Single Coil Brush-less DC Fan
- Single Coil Brush-less DC Motor

■ General Description

ATS477 is the integrated Hall sensor with output drivers designed for electrical commutation of brush-less DC motor application. The device included as follows: on-chip Hall voltage generator for magnetic sensing; the error amplifier that amplifies the Hall voltage; a comparator is to provide switching hysteresis for noise rejection; the bi-direction drivers for sinking and driving large current load, frequency generator (FG) provide a signal proportional to rotation speed. Internal bandgap regulator is used to provide temperature compensated bias for internal circuits and allows a wide operating supply voltage range. Built-in protection circuit and output shunt Zener diodes were applied for protecting output drivers during operating.

If a magnetic flux density larger than threshold B_{op} , DO is turned to sink and DOB is turned to drive. The output state is held until a magnetic flux density reversal falls below B_{rp} causing DO to be turned to drive and DOB turned to sink.

ATS477 is rated for operation over-temperature range from 0 °C to 70 °C and voltage range from 4.0V to 20V. The devices are available in low cost die forms or rugged SIP-4L and power SOP-7L packages.
