

Clock generator for PD

BU2190F

The BU2190F is a clock generator IC for PD system drives, and uses a single crystal resonator to generate the three clock signals needed for PD system drives.

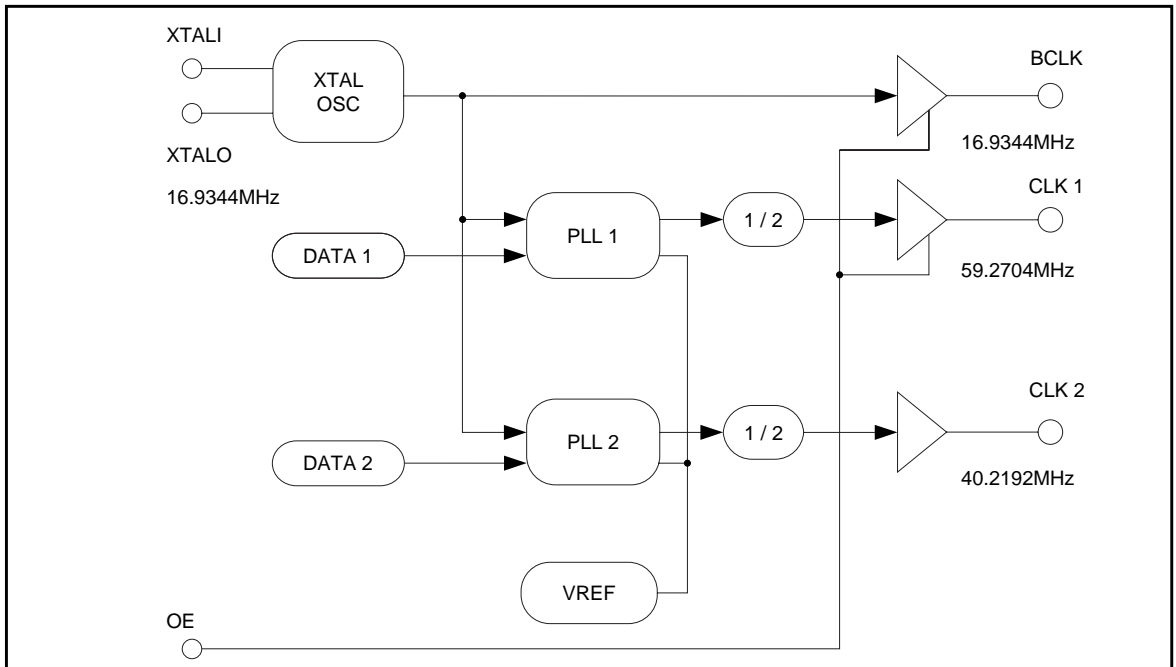

●Applications

PD system

●Features

- 1) Clock signals of three different frequencies can be generated with a single attached crystal resonator.
- 2) Internal PLL loop filter, eliminating the need for an attached loop.
- 3) Single 5.0V power supply.
- 4) SOP 8-pin package.

If used mounted by a socket, the proper characteristics may not be able to be obtained.

●Attached components

(1) Crystal oscillator

A crystal resonator with an oscillation frequency of 16.9344MHz is usually sufficient. However, if fo precision is necessary, adjust by attaching a capacity to each end of the crystal oscillator.

(2) Power supply
