

512MB Unbuffered SDRAM DIMM

EBS52UC8APFA (64M words × 64 bits, 2 banks)

Description

The EBS52UC8APFA is 64M words × 64 bits, 2 banks Synchronous Dynamic RAM Registered Module, mounted 16 pieces of 256M bits SDRAM sealed in TSOP package. This module provides high density and large quantities of memory in a small space without utilizing the surface mounting technology. Decoupling capacitors are mounted on power supply line for noise reduction.

Features

- Fully compatible with 8 bytes DIMM: JEDEC standard outline
- 168-pin socket type dual in line memory module (DIMM)
 - PCB height: 34.93mm (1.38inch)
 - Lead pitch: 1.27mm
- 3.3V power supply
- Clock frequency: 133MHz (max.)
- LVTTTL interface
- Data bus width: × 64 non-ECC
- Single pulsed /RAS
- 4 Banks can operates simultaneously and independently
- Burst read/write operation and burst read/single write operation capability
- Programmable burst length (BL): 1, 2, 4, 8
- 2 variations of burst sequence
 - Sequential
 - Interleave
- Programmable /CAS latency (CL): 2, 3
- Byte control by DQMB
- Refresh cycles: 8192 refresh cycles/64ms
- 2 variations of refresh
 - Auto refresh
 - Self refresh

Ordering Information

| Part number | Clock frequency MHz (max.) | /CAS latency | Package | Contact pad | Mounted devices |
|------------------|-------------------------------|--------------|--------------|-------------|-----------------|
| EBS52UC8APFA-7A | 133 | 2, 3 | 168-pin DIMM | Gold | EDS2508APTA |
| EBS52UC8APFA-75* | 133 | 3 | | | |

Note: 100MHz operation at /CAS latency = 2.

Pin Configurations

Pin Description

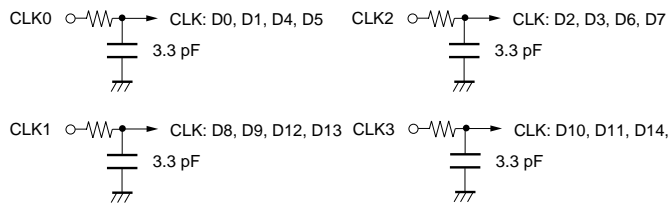

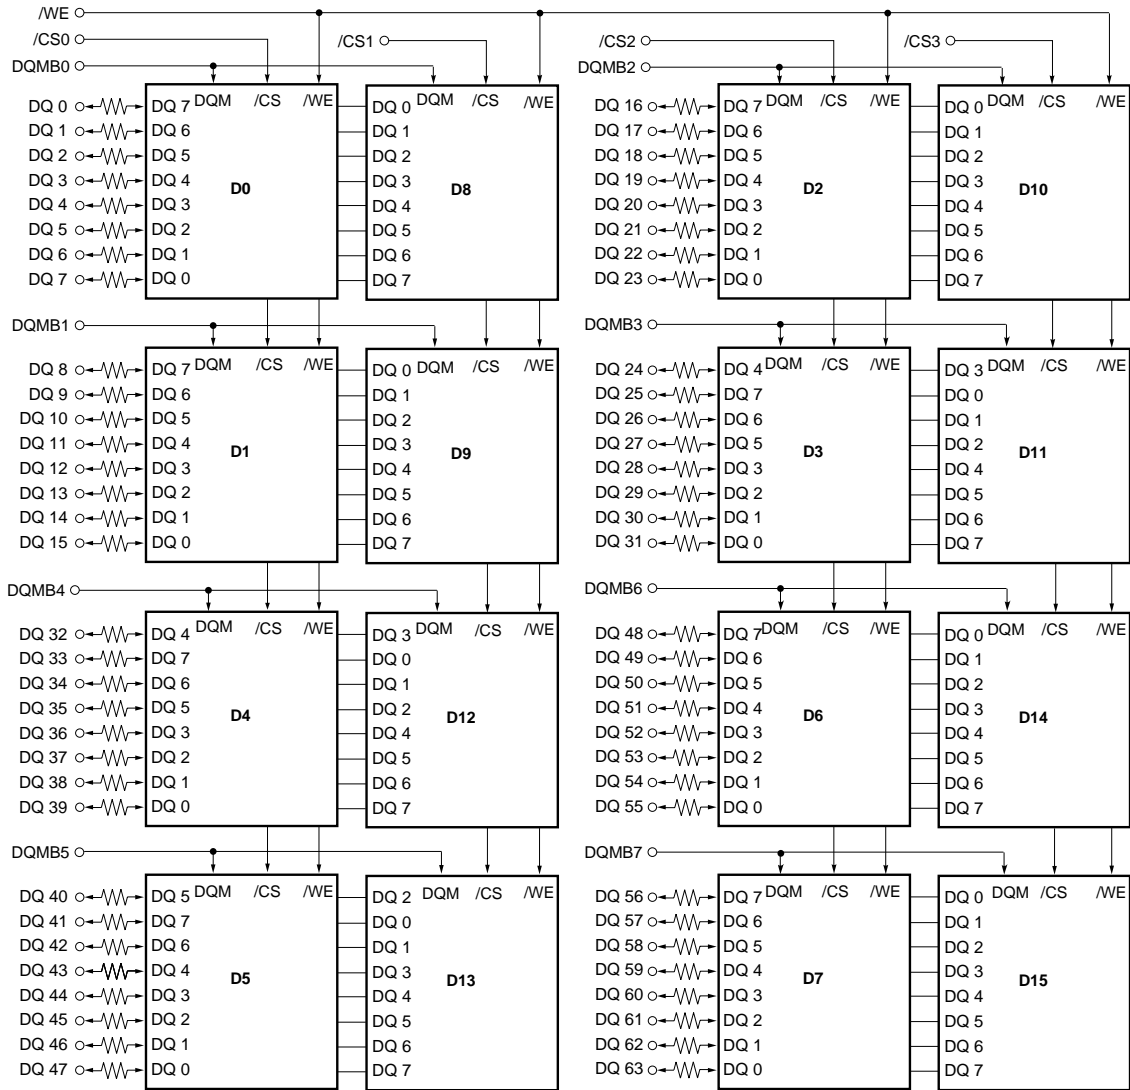

| Pin name | Function |
|----------------|---|
| A0 to A12 | Address input — Row address A0 to A12 — Column address A0 to A9 |
| BA0, BA1 | Bank select address |
| DQ0 to DQ63 | Data input/output |
| /CS0 to /CS3 | Chip select input |
| /RAS | Row enable (/RAS) input |
| /CAS | Column enable (/CAS) input |
| /WE | Write enable input |
| DQMB0 to DQMB7 | Byte data mask |
| CLK0 to CLK3 | Clock input |
| CKE0, CKE1 | Clock enable input |
| SDA | Data input/output for serial PD |
| SCL | Clock input for serial PD |
| SA0 to SA2 | Serial address input |
| VDD | Primary positive power supply |
| VSS | Ground |
| NC | No connection |

Block Diagram

Remarks 1. The value of all resistors is 10Ω except CKE1.
2. D0 to D7: 256M bits SDRAM

Electrical Specifications

- All voltages are referenced to VSS (GND).
- After power up, wait more than 100 μ s and then, execute power on sequence and CBR (Auto) refresh before proper device operation is achieved.

Absolute Maximum Ratings

| Parameter | Symbol | Value | Unit | Note |
|------------------------------------|--------|---|--------------|------|
| Voltage on any pin relative to VSS | VT | -0.5 to VDD + 0.5 (\leq 4.6 (max.)) | V | |
| Supply voltage relative to VSS | VDD | -0.5 to +4.6 | V | |
| Short circuit output current | IOS | 50 | mA | |
| Power dissipation | PD | 16 | W | |
| Operating temperature | TA | 0 to +70 | $^{\circ}$ C | 1 |
| Storage temperature | Tstg | -55 to +125 | $^{\circ}$ C | |

Notes: 1. SDRAM device specification

Caution Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

DC Operating Conditions (TA = 0 to +70 $^{\circ}$ C) (SDRAM device specification)

| Parameter | Symbol | min. | max. | Unit | Note |
|--------------------|--------|------|-----------|------|------|
| Supply voltage | VDD | 3.0 | 3.6 | V | 1 |
| | VSS | 0 | 0 | V | 2 |
| Input high voltage | VIH | 2.0 | VDD + 0.3 | V | 3 |
| Input low voltage | VIL | -0.3 | 0.8 | V | 4 |

- Notes: 1. The supply voltage with all VDD pins must be on the same level.
 2. The supply voltage with all VSS pins must be on the same level.
 3. VIH (max.) = VDD + 2.0V for pulse width \leq 3ns at VDD.
 4. VIL (min.) = VSS - 2.0V for pulse width \leq 3ns at VSS.

DC Characteristics1 (TA = 0 to 70°C, VDD = 3.3V ± 0.3V, VSS = 0V)

| Parameter | Symbol | Grade | max. | Unit | Test condition | Notes |
|--|--------|-------|------|------|--------------------------------------|---------|
| Operating current | ICC1 | -7A | 1280 | mA | Burst length = 1 tRC = tRC (min.) | 1, 2, 3 |
| | ICC1 | -75 | 1120 | mA | | |
| Standby current in power down | ICC2P | | 48 | mA | CKE = VIL, tCK = 12ns | 6 |
| Standby current in non power down | ICC2N | | 320 | mA | CKE, /CS = VIH, tCK = 12ns | 4 |
| Active standby current in power down | ICC3P | | 64 | mA | CKE = VIL, tCK = 12ns | 1, 2, 6 |
| Active standby current in non power down | ICC3N | | 480 | mA | CKE, /CS = VIH, tCK = 12ns | 1, 2, 4 |
| Burst operating current | ICC4 | | 1320 | mA | tCK = tCK (min.), BL = 4 | 1, 2, 5 |
| Refresh current | ICC5 | -7A | 2240 | mA | tRC = tRC (min.) | 3 |
| | ICC5 | -75 | 2000 | mA | | |
| Self refresh current | ICC6 | | 48 | mA | VIH ≥ VDD – 0.2V VIL ≤ 0.2V | 7 |

Notes: 1. ICC depends on output load condition when the device is selected. ICC (max.) is specified at the output open condition.

2. One bank operation.
3. Input signals are changed once per one clock.
4. Input signals are changed once per two clocks.
5. Input signals are changed once per four clocks.
6. After power down mode, CLK operating current.
7. After self refresh mode set, self refresh current.

DC Characteristics2 (TA = 0 to 70°C, VDD = 3.3V ± 0.3V, VSS = 0V)

| Parameter | Symbol | min. | max. | Unit | Test condition | Notes |
|------------------------|--------|------|------|------|--------------------------------|-------|
| Input leakage current | ILI | -16 | 16 | μA | 0 ≤ VIN ≤ VDD | |
| Output leakage current | ILO | -3 | 3 | μA | 0 ≤ VOUT ≤ VDD DQ = disable | |
| Output high voltage | VOH | 2.4 | — | V | IOH = -4mA | |
| Output low voltage | VOL | — | 0.4 | V | IOL = 4mA | |

Pin Capacitance (TA = 25°C, VDD = 3.3V ± 0.3V)

| Parameter | Symbol | Pins | max. | Unit | Notes |
|-------------------------------|--------|-----------------|------|------|-------|
| Input capacitance | CI1 | Address | TBD | pF | |
| | CI2 | /RAS, /CAS, /WE | TBD | pF | |
| | CI3 | CKE | TBD | pF | |
| | CI4 | /CS | TBD | pF | |
| | CI5 | CLK | TBD | pF | |
| | CI6 | DQMB | TBD | pF | |
| Data input/output capacitance | CI/O1 | DQ | TBD | pF | |

AC Characteristics (TA = 0 to 70°C, VDD = 3.3V ± 0.3V, VSS = 0V) (SDRAM device specification)

| Parameter | Symbol | -7A | -75 | max. | Unit | Notes |
|--|--------|-------------|-------------|--------|------|---------|
| | | min. | min. | | | |
| System clock cycle time | tCK | 7.5 | 7.5 | — | Ns | 1 |
| CLK high pulse width | tCH | 2.5 | 2.5 | — | Ns | 1 |
| CLK low pulse width | tCL | 2.5 | 2.5 | — | Ns | 1 |
| Access time from CLK | tAC | — | — | 5.4 | Ns | 1, 2 |
| Data-out hold time | tOH | 2.7 | 2.7 | — | Ns | 1, 2 |
| CLK to Data-out low impedance | tLZ | 1 | 1 | — | Ns | 1, 2, 3 |
| CLK to Data-out high impedance | tHZ | — | — | 5.4 | Ns | 1, 4 |
| Input setup time | tSI | 1.5 | 1.5 | — | Ns | 1 |
| Input hold time | tHI | 0.8 | 0.8 | — | Ns | 1 |
| Ref/Active to Ref/Active command period | tRC | 60 | 67.5 | — | Ns | 1 |
| Active to Precharge command period | tRAS | 45 | 45 | 120000 | Ns | 1 |
| Active command to column command (same bank) | tRCD | 15 | 20 | — | Ns | 1 |
| Precharge to active command period | tRP | 15 | 20 | — | Ns | 1 |
| Write recovery or data-in to precharge lead time | tDPL | 15 | 15 | — | Ns | 1 |
| Last data into active latency | tDAL | 2CLK + 15ns | 2CLK + 20ns | — | | |
| Active (a) to Active (b) command period | tRRD | 15 | 15 | — | Ns | 1 |
| Transition time (rise and fall) | tT | 0.5 | 0.5 | 5 | Ns | |
| Refresh period (8192 refresh cycles) | tREF | — | — | 64 | Ms | |

Notes: 1. AC measurement assumes tT = 0.5ns. Reference level for timing of input signals is 1.4V.

2. Access time is measured at 1.4V. Load condition is $C_L = 50\text{pF}$.

3. tLZ (min.) defines the time at which the outputs achieves the low impedance state.

4. tHZ (max.) defines the time at which the outputs achieves the high impedance state.

Test Conditions

- Input and output timing reference levels: 1.4V
- Input waveform and output load: See following figures

Relationship Between Frequency and Minimum Latency (SDRAM device specification)

| Parameter | | -7A | | -75 | |
|---|--------|--------|--------|--------|----------------|
| Frequency (MHz) | | 133 | 133 | 133 | |
| tCK (ns) | | 7.5 | 7.5 | 7.5 | |
| /CAS latency | Symbol | CL = 3 | CL = 2 | CL = 3 | Notes |
| Active command to column command (same bank) | IRCD | 2 | 2 | 3 | 1 |
| Active command to active command (same bank) | IRC | 8 | 8 | 9 | 1 |
| Active command to precharge command (same bank) | IRAS | 6 | 6 | 6 | 1 |
| Precharge command to active command (same bank) | IRP | 2 | 2 | 3 | 1 |
| Write recovery or data-in to precharge command (same bank) | IDPL | 2 | 2 | 2 | 1 |
| Active command to active command (different bank) | IRRD | 2 | 2 | 2 | 1 |
| Self refresh exit time | ISREX | 1 | 1 | 1 | 2 |
| Last data in to active command (Auto precharge, same bank) | IDAL | 4 | 4 | 5 | = [IDPL + IRP] |
| Self refresh exit to command input | ISEC | 8 | 8 | 9 | = [IRC] 3 |
| Precharge command to high impedance | IHZP | 3 | 2 | 3 | |
| Last data out to active command (Auto precharge, same bank) | IAPR | 1 | 1 | 1 | |
| Last data out to precharge (early precharge) | IEP | -2 | -1 | -2 | |
| Column command to column command | ICCD | 1 | 1 | 1 | |
| Write command to data in latency | IWCD | 0 | 0 | 0 | |
| DQM to data in | IDID | 0 | 0 | 0 | |
| DQM to data out | IDOD | 2 | 2 | 2 | |
| CKE to CLK disable | ICLE | 1 | 1 | 1 | |
| Register set to active command | IMRD | 2 | 2 | 2 | |
| /CS to command disable | ICDD | 0 | 0 | 0 | |
| Power down exit to command input | IPEC | 1 | 1 | 1 | |

- Notes: 1. IRCD to IRRD are recommended value.
 2. Be valid [DESL] or [NOP] at next command of self refresh exit.
 3. Except [DESL] and [NOP]

Pin Functions

CLK0 to CLK3 (input pin): CLK is the master clock input to this pin. The other input signals are referred at CLK rising edge.

/CS0 to /CS3 (input pin): When /CS is Low, the command input cycle becomes valid. When /CS is High, all inputs are ignored. However, internal operations (bank active, burst operations, etc.) are held.

/RAS, /CAS and /WE (input pins): Although these pin names are the same as those of conventional DRAMs, they function in a different way. These pins define operation commands (read, write, etc.) depending on the combination of their voltage levels. For details, refer to the command operation section.

A0 to A12 (input pins): Row address (AX0 to AX12) is determined by A0 to A12 level at the bank active command cycle CLK rising edge. Column address (AY0 to AY9) is determined by A0 to A9 level at the read or write command cycle CLK rising edge. And this column address becomes burst access start address. A10 defines the precharge mode. When A10 = High at the precharge command cycle, all banks are precharged. But when A10 = Low at the precharge command cycle, only the bank that is selected by BA0 and BA1 (BA) is precharged.

BA0 and BA1 (input pin)

BA0 and BA1 are bank select signal (BA). (See Bank Select Signal Table)

[Bank Select Signal Table]

| | BA0 | BA1 |
|--------|-----|-----|
| Bank 0 | L | L |
| Bank 1 | H | L |
| Bank 2 | L | H |
| Bank 3 | H | H |

Remark: H: VIH. L: VIL.

CKE0, CKE1 (input pin): This pin determines whether or not the next CLK is valid. If CKE is High, the next CLK rising edge is valid. If CKE is Low, the next CLK rising edge is invalid. This pin is used for power-down and clock suspend modes.

DQMB0 to DQMB7 (input pins): Read operation: If DQMB is High, the output buffer becomes High-Z. If the DQMB is Low, the output buffer becomes Low-Z.

Write operation: If DQMB is High, the previous data is held (the new data is not written). If DQMB is Low, the data is written.

DQ0 to DQ63 (input/output pins): Data is input to and output from these pins.

VDD (power supply pins): 3.3V is applied.

VSS (power supply pins): Ground is connected.

Detailed Operation Part

Refer to the EDS2504APTA/08APTA/16APTA datasheet (E0272E).

Physical Outline

Note: Tolerance on all dimensions \pm 0.15 unless otherwise specified.

ECA-TS2-0049-01

CAUTION FOR HANDLING MEMORY MODULES

When handling or inserting memory modules, be sure not to touch any components on the modules, such as the memory ICs, chip capacitors and chip resistors. It is necessary to avoid undue mechanical stress on these components to prevent damaging them.

In particular, do not push module cover or drop the modules in order to protect from mechanical defects, which would be electrical defects.

When re-packing memory modules, be sure the modules are not touching each other.

Modules in contact with other modules may cause excessive mechanical stress, which may damage the modules.

MDE0202

NOTES FOR CMOS DEVICES**① PRECAUTION AGAINST ESD FOR MOS DEVICES**

Exposing the MOS devices to a strong electric field can cause destruction of the gate oxide and ultimately degrade the MOS devices operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it, when once it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. MOS devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. MOS devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor MOS devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS DEVICES

No connection for CMOS devices input pins can be a cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. The unused pins must be handled in accordance with the related specifications.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Power-on does not necessarily define initial status of MOS devices. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the MOS devices with reset function have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. MOS devices are not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for MOS devices having reset function.

The information in this document is subject to change without notice. Before using this document, confirm that this is the latest version.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of Elpida Memory, Inc.

Elpida Memory, Inc. does not assume any liability for infringement of any intellectual property rights (including but not limited to patents, copyrights, and circuit layout licenses) of Elpida Memory, Inc. or third parties by or arising from the use of the products or information listed in this document. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of Elpida Memory, Inc. or others.

Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of the customer's equipment shall be done under the full responsibility of the customer. Elpida Memory, Inc. assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.

[Product applications]

Elpida Memory, Inc. makes every attempt to ensure that its products are of high quality and reliability. However, users are instructed to contact Elpida Memory's sales office before using the product in aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment, medical equipment for life support, or other such application in which especially high quality and reliability is demanded or where its failure or malfunction may directly threaten human life or cause risk of bodily injury.

[Product usage]

Design your application so that the product is used within the ranges and conditions guaranteed by Elpida Memory, Inc., including the maximum ratings, operating supply voltage range, heat radiation characteristics, installation conditions and other related characteristics. Elpida Memory, Inc. bears no responsibility for failure or damage when the product is used beyond the guaranteed ranges and conditions. Even within the guaranteed ranges and conditions, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Elpida Memory, Inc. products does not cause bodily injury, fire or other consequential damage due to the operation of the Elpida Memory, Inc. product.

[Usage environment]

This product is not designed to be resistant to electromagnetic waves or radiation. This product must be used in a non-condensing environment.

If you export the products or technology described in this document that are controlled by the Foreign Exchange and Foreign Trade Law of Japan, you must follow the necessary procedures in accordance with the relevant laws and regulations of Japan. Also, if you export products/technology controlled by U.S. export control regulations, or another country's export control laws or regulations, you must follow the necessary procedures in accordance with such laws or regulations.

If these products/technology are sold, leased, or transferred to a third party, or a third party is granted license to use these products, that third party must be made aware that they are responsible for compliance with the relevant laws and regulations.
