LINEAR INTEGRATED CIRCUIT
WHITE LED STEP-UP CONVERTER

■ DESCRIPTION

The UTC **L5100** is a STEP-UP DC/DC Converter and designed for driving white LEDs with a constant current. It can drive several LEDs in series by a Li-Ion cell. UTC **L5100** switches at a high frequency 1.2MHz, so it can allowing the use of tiny external components. The output capacitor can be as small as 0.22μF, saving space and cost compare with alternative other solutions. The low 95mV feedback voltage minimizes power loss in the current setting resistor can have better efficiency.

■ **PIN DESCRIPTION**

| PIN NO.		PIN NAME	SYMBOL	FUNCTION
SOT-25	SOT-363			
1	1	Switch	SW	Connect inductor/diode here. Minimize trace area at this pin to reduce EMI.
2	2/5	Ground	GND	Connect directly to local ground plane.
3	3	Feedback	FB	Reference voltage is 95mV. Connect cathode of lowest LED and resistor here. Calculate resistor value according to the formula: $R_{FB} = 95mV/I_{LED}$
4	4	Shutdown	$\overline{SHDN}$	Connect to 1.5V or higher to enable device; 0.4V or less to disable device.
5	6	Input Supply	V_{IN}	Input Supply Pin. Must be locally bypassed.
