CMOS IC

LOW NOISE, REGULATED CHARGE PUMP DC/DC CONVERTERS

DESCRIPTION

The UTC **L5200-xx** series are low noise, constant frequency charge pump DC/DC converters and designed to increase efficiency in white LED application. The operating voltage range is 2.7V ~ V_{OUT} input with up to 100mA of output current. Low external parts counts (one flying capacitor and two small bypass capacitors at V_{IN} and V_{OUT}) make the UTC **L5200-xx** series ideally suited for small, battery-powered applications.

A charge-pump architecture maintains constant switching frequency to zero load and reduces both output and input ripple. The UTC **L5200-xx** series have thermal shutdown capability to escape the device damaged from a continuous short-circuit. With built-in soft-start circuitry to prevents excessive current flow at V_{IN} during start-up. High switching frequency enables the use of small ceramic capacitors. A low-current shutdown feature disconnects the load from V_{IN} and reduces quiescent current to $<1\mu A$.

The **L5200-ADJ** is available in MSOP-8 package and **L5200-fixed** in SOT-26 and TSOT-26 package.

PIN CONFIGURATIONS

PIN DESCRIPTION

PIN NO.		PIN NAME	FUNCTION
L5200-ADJ MSOP-8	L5200-xx SOT-26/TSOT-26		
1	6	C+	Flying Capacitor Positive Terminal
2	5	V _{IN}	Input Supply Voltage, should be bypassed with a 1μF~4.7μF low ESR ceramic capacitor.
3	4	C ⁻	Flying Capacitor Negative Terminal
4, 5	2	GND	Ground terminal, should be tied to a ground plane for best performance
6	3	SHDN	Shutdown Mode, Active-Low Input. A low on SHDN disables the L5200 series. SHDN must not be allowed to float.
7	X	FB	Feedback Input Pin for Adjustable output. An output divider should be connected from V _{OUT} to FB to program the output voltage.
8	1	V _{OUT}	Regulated Output Voltage, should be bypassed with a 1μF~4.7μF low ESR ceramic capacitor as close as possible to the pin for best performance

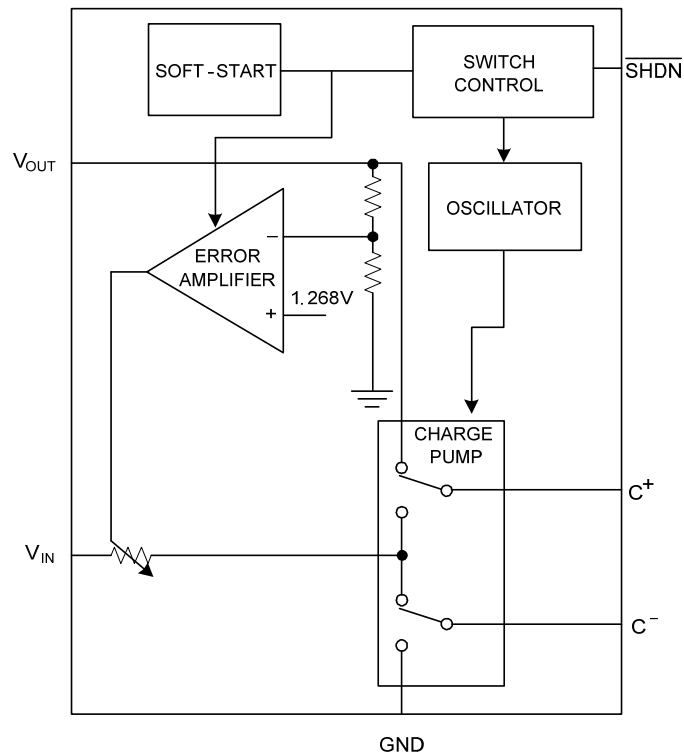

X : The pin is Inexistent for SOT-26 and TSOT-26 package.
