

P122

High Silicon Pressure Sensor Die

The P122 piezoresistive pressure sensors are offered in a miniature 0.10 in x 0.10 in (2.5 mm x 2.5 mm) die. When excited with 1.0 mA, the P122 produces a millivolt output that is proportional to input pressure. The P122 is available as an absolute pressure sensor where the media pressure is referenced to an internal vacuum sealed in the die. With NovaSensor's SenStable® process, the P122 will provide very good long-term stability and excellent repeatability.

Shipping and Handling

Wafers are sawn on sticky tape with plastic rings. All sensor wafers are electrically probed and visually inspected. Each wafer will be labeled with the lot, wafer, device number and the number of available sensor die. Wafers are shipped in protective plastic containers.
