LINEAR INTEGRATED CIRCUIT

VOLTAGE MODE PWM CONTROL CIRCUIT

DESCRIPTION

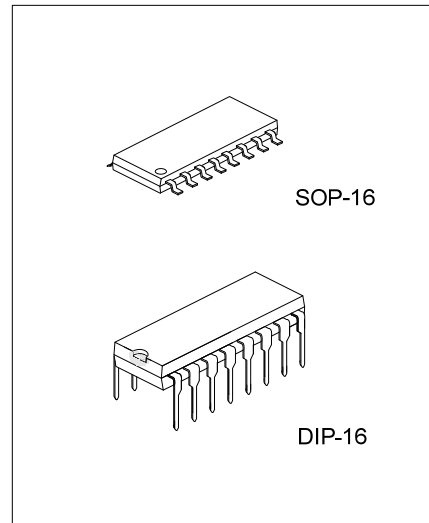

The UTC **TL494** incorporates all the functions required in the construction of a pulse-width modulation switching circuit. Designed primarily for switching power supply control or DC-DC converters, it offers the systems engineer the flexibility to tailor control circuitry to its own application.

FEATURES

- *Complete PWM power control circuitry
- *Uncommitted outputs for 200mA sink or source current
- *Output control selects single ended or push pull operation
- *Internal circuitry prohibits double pulses over total range
- *Easy synchronization
