**DIMENSIONS** in millimeters

Component outline.

**APPLICATIONS**

- Humidity measurements in electronic hygrometers for domestic use
- Self-regulating air humidifiers, etc.

**DESCRIPTION**

This capacitive atmospheric humidity sensor consists of a non-conductive foil, which is covered on both sides with a layer of gold. The dielectric constant of the foil changes as a function of the relative humidity of the ambient atmosphere and, accordingly, the capacitance value of the sensor is a measure for relative humidity. The foil is clamped between contact springs and assembled in a plastic housing. It is provided with two connecting pins which fit printed-circuit boards with a grid pitch of 2.54 mm, provision is also made for fastening with 3 mm bolts. The characteristics are not affected by incidental water condensation on the sensor foil. It should not be exposed to either acetone or chlorine vapours.

**MOUNTING**

The device can be soldered directly on to a printed-circuit board or fastened with 3 mm bolts.

**SOLDERING**

Solderability: ≤240 °C; ≤4 s.  
Resistance to heat: ≤240 °C; ≤4 s.

**ROBUSTNESS OF TERMINATIONS**

Tensile strength: 10 N.

**ELECTRICAL CHARACTERISTICS**
