These Hall-effect switches are designed for magnetic actuation using a bipolar magnetic field, i.e., a north-south alternating field. They combine extreme magnetic sensitivity with excellent stability over varying temperature and supply voltage. The high sensitivity permits their use with multi-pole ring magnets over relatively large distances.

Each device includes a voltage regulator, quadratic Hall voltage generator, temperature stability circuit, signal amplifier, Schmitt trigger, and open-collector output on a single silicon chip. The on-board regulator permits operation with supply voltages of 4.5 to 24 V . The switch output can sink up to 25 mA . With suitable output pull up, they can be used directly with bipolar or MOS logic circuits.

The three package styles available provide a magnetically optimized package for most applications. Suffix 'LT' is a miniature SOT89/TO243AA transistor package for surface-mount applications; suffix 'UA' features wire leads for through-hole mounting. Prefix 'UGN' devices are rated for continuous operation over the temperature range of $-20^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$, prefix 'UGS' devices over an extended range of $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$, and prefix 'UGL' devices over the range of $-40^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$.

NOTE: As used here, negative flux densities are defined as less than zero (algebraic convention.)
Typical values are at $\mathrm{T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}$ and $\mathrm{V}_{\mathrm{CC}}=12 \mathrm{~V}$.
1 gauss (G) is exactly equal to 0.1 millitesla (mT).

HALL-EFFECT SWITCHES

## TYPICAL CHARACTERISTICS

Powering up in the absence of a magnetic field (less than $\mathrm{B}_{\mathrm{OP}}$ and higher than $\mathrm{B}_{\mathrm{RP}}$ ) will allow an indeterminate output state. The correct state is warranted after the first excursion beyond $\mathrm{B}_{\mathrm{OP}}$ or $\mathrm{B}_{\mathrm{RP}}$.

Bipolar switches may switch on removal of field but require field reversal for reliable operation over temperature range; latches will not switch on removal of magnetic field.

NOTES: 1. Exact body and lead configuration at vendor's option within limits shown.
2. Supplied in bulk pack ( 500 pieces per bag) or add "TR" to part number for tape and reel.
3. Only low-temperature $\left(\leq 240^{\circ} \mathrm{C}\right)$ reflow-soldering techniques are recommended for SOT89 devices.

## PACKAGE DESIGNATOR 'UA’

NOTES: 1. Tolerances on package height and width represent allowable mold offsets. Dimensions given are measured at the widest point (parting line).
2. Exact body and lead configuration at vendor's option within limits shown.
3. Height does not include mold gate flash.
4. Recommended minimum PWB hole diameter to clear transition area is $0.035^{\prime \prime}(0.89 \mathrm{~mm})$.
5. Where no tolerance is specified, dimension is nominal.
6. Supplied in bulk pack (500 pieces per bag).
