

Description

The ICS548-05 is a low cost, low jitter, high performance clock synthesizer designed to produce audio sampling rates for MP3 systems. Using ICS' patented analog/digital Phase-Locked Loop (PLL) techniques, the device uses an inexpensive 3.6864 MHz crystal or clock input to exactly produce all of the popular audio sampling frequencies. Power down modes allow the chip to be turned off completely, or the PLL and audio clock output to be turned off separately.

ICS manufactures the largest variety of multimedia clock synthesizers for all applications. Consult ICS to eliminate VCXOs, crystals and oscillators from your board.

Features

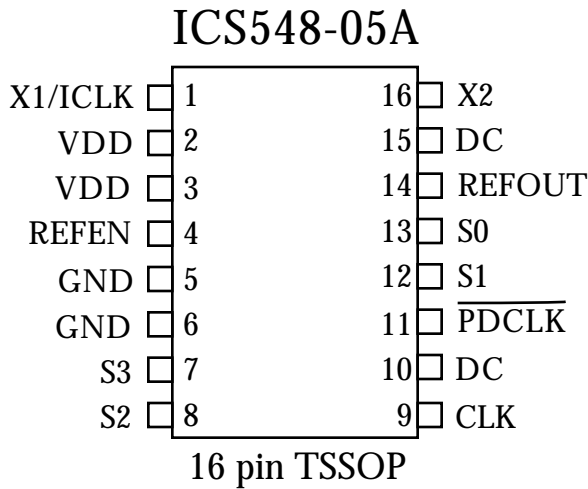

- Packaged in 16 pin TSSOP
- Ideal for Cirrus Logic's MP3 chips
- Replaces multiple oscillators
- 3.3V (will work down to 2.7V) or 5V operation
- Uses an inexpensive 3.6864 MHz crystal or clock input
- Supports 32 kHz, 44.1 kHz, 48 kHz, and 96 kHz audio sampling rates
- Provides 128fs and 256fs clocks
- Zero ppm synthesis error
- Includes Power Down features
- Advanced, low power, sub-micron CMOS process

Power Down Clock Select Table

REFEN	$\overline{\text{PDCLK}}$	Power Down Selection Mode
Pin 4	Pin 11	
0	0	The entire chip is off.
0	1	PLL and CLK output run, REFOUT low.
1	0	REFOUT running, PLL off, CLK low.
1	1	All running.

Key: 0 = connect directly to GND
1 = connect directly to VDD

Pin Descriptions

Number	Name	Type	Description
1	X1/ICLK	XI	Crystal connection. Connect to a 3.6864 MHz crystal, or input clock.
2, 3	VDD	P	Connect to +3.3V or +5V. All VDDs must be same.
4	REFEN	I	Reference Clock Enable. See above table.
5, 6	GND	P	Connect to ground.
7	S3	I	Frequency select pin 3. Determines clock outputs per table above.
8	S2	I	Frequency select pin 2. Determines clock outputs per table above.
9	CLK	O	Audio clock output set by status of S0-S3. See table above.
10, 15	DC	-	Don't Connect. Do not connect anything to these pins.
11	$\overline{\text{PDCLK}}$	I	Power Down Clock. See above table.
12	S1	I	Frequency select pin 1. Determines clock outputs per table above.
13	S0	I	Frequency select pin 0. Determines clock outputs per table above.
14	REFOUT	O	Buffered 3.6864 MHz oscillator output clock. Controlled by REFEN.
16	X2	XO	Crystal connection. Connect to a 3.6864 MHz crystal, or leave unconnected for clock.

Key: I = Input; O = output; P = power supply connection; XI, XO = crystal connections
The input pins S3:S0 lack pull-ups, so they cannot be left floating. Tie directly to VDD or GND. For a clock input, connect the input to X1, and leave X2 unconnected (floating).

Note: 1. Stresses beyond those listed under Absolute Maximum Ratings could cause permanent damage to the device. Prolonged exposure to levels above the operating limits but below the Absolute Maximums may affect device reliability.

External Components/ Application Information

The ICS548-05 requires a minimum number of external components for proper operation. A decoupling capacitor of 0.01µF should be connected between VDD and GND on pins 3 and 5, as close to the ICS548-05 as possible. Other VDDs can be connected to pin 3. A series termination resistor of 33 Ω may be used for each clock output. If REFOUT is not used, then REFEN should be connected to ground. The input crystal must be connected as close to the chip as possible. The input crystal should be fundamental mode, parallel resonant. For exact accuracy of the output frequencies, the crystal can be tuned with two identical capacitors to ground, as shown on the block diagram. The value of these two crystal caps should be equal to $(C_L - 6) * 2$, where C_L is the crystal load (or correlation) capacitance.
