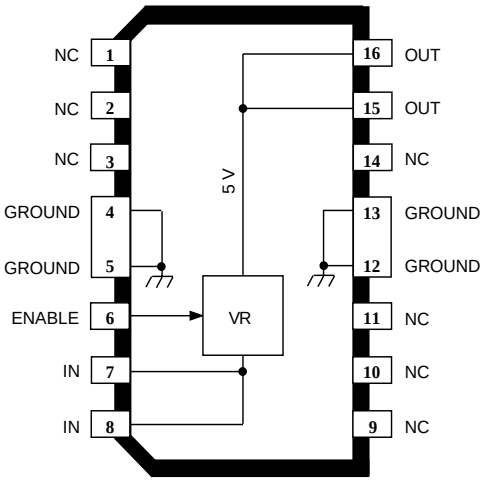
LOW-DROPOUT, 5 V REGULATOR — HIGH EFFICIENCY



Dwg. PS-018

ABSOLUTE MAXIMUM RATINGS at T_A = +25°C

Input Voltage, V_I ..... **10 V**
Output Current, I_O
(40% duty cycle) ..... **1 A***
(75% duty cycle) ..... **500 mA***
(continuous) ..... **370 mA***
Operating Temperature Range,
T_A ..... **-20°C to +85°C**
Junction Temperature, T_J ..... **+150°C†**
Storage Temperature Range,
T_S ..... **-40°C to +150°C**

* Output current rating is limited by input voltage, duty cycle, and ambient temperature. Under any set of conditions, do not exceed a junction temperature of +150°C. See next page.

† Fault conditions that produce excessive junction temperature will activate device thermal shutdown circuitry. These conditions can be tolerated but should be avoided.

Especially suited for hand-held, portable, battery-operated equipment such as cellular telephones, the A8181SLB low dropout voltage regulator provides high efficiency for maximum battery life in a minimum package size. Equally applicable to camcorders and portable computers, the device provides a fixed 5 V regulated continuous output at almost 200 mA of load current under worst-case conditions. Under normal operating conditions, output currents over 500 mA are permitted.

A MOSFET pass element delivers high output current with an input-output differential of less than 300 mV. For high efficiency, the low dropout voltage allows a longer battery discharge before output voltage regulation is lost. A low quiescent current, even during high load conditions, makes the device ideal for standby power systems. High regulator accuracy and excellent temperature characteristics are provided by a bandgap reference. An enable input gives the designer complete control over sequential power-up or emergency shutdown.

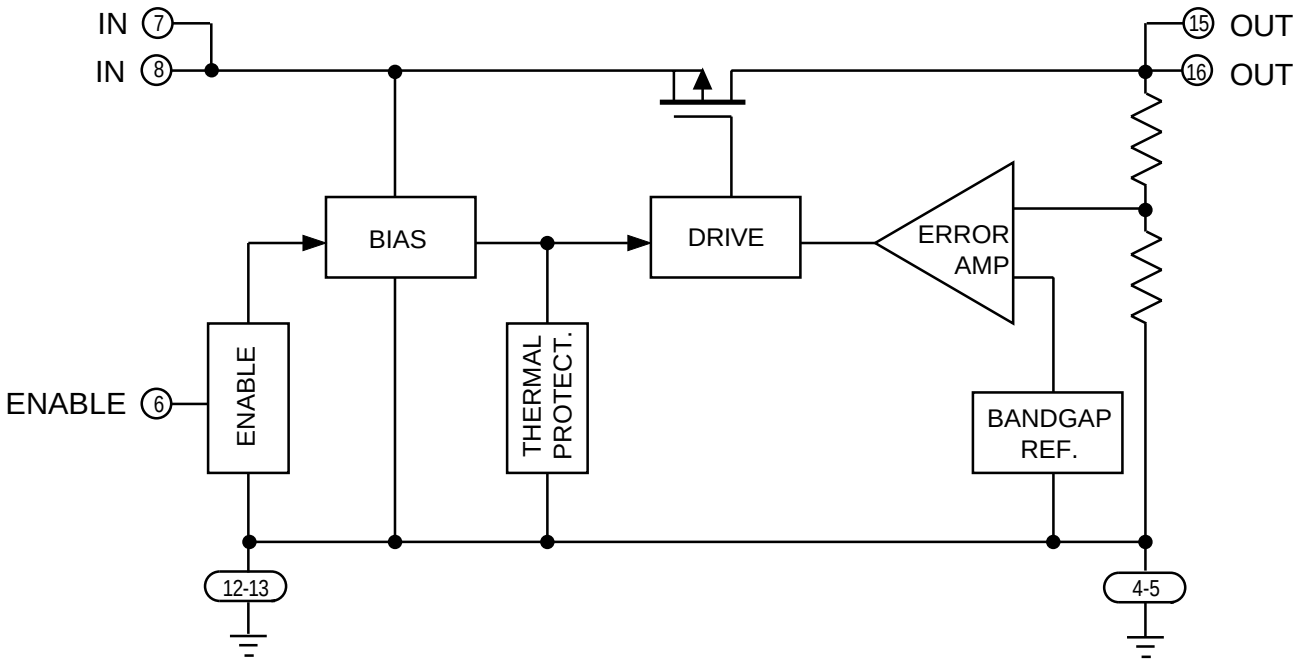
This device is supplied in a 16-lead wide-body, small-outline plastic power package (SOIC) for surface-mount applications. The copper batwing provides for maximum package power dissipation in the smallest possible construction. The A8181SLB is rated for operation over a temperature range of -20°C to +85°C.

FEATURES AND BENEFITS

- High Efficiency Provides Extended Battery Life
- Less Than 300 mV Dropout Voltage
- Low Quiescent Current
- >200 mA Output Current
- LSTTL-Compatible ON/OFF Control
  For Sequential Power-up or Emergency Shutdown
- Internal Thermal Protection
- SOIC Surface-Mount Package

Always order by complete part number: **A8181SLB** .

FUNCTIONAL BLOCK DIAGRAM



Dwg. FS-012

MAXIMUM ALLOWABLE OUTPUT CURRENT with device mounted on 2.24" x 2.24" (56.9 mm x 56.9 mm) solder-coated copper-clad board in still air.

	Maximum Allowable Output Current in Milliamperes with V_I = 10 V, T_J = 150°C*								
	dc (Duty Cycle)								
T_A	100%	90%	80%	70%	60%	50%	40%	30%	20%
25°C	370	415	465	530	620	745	930	1000	1000
50°C	295	330	370	425	495	595	745	995	1000
70°C	235	265	295	340	395	475	595	795	1000
85°C	190	215	240	275	320	385	485	645	970

* $I_O = (T_J - T_A)/([V_I - V_O] R_{\theta JA} \bullet dc) = (150 - T_A)/(5 \bullet 67 \bullet dc)$

Output current rating can be increased (to 1 A maximum) by heat sinking or reducing the input voltage. With an infinite heat sink, $R_{JA} = R_{JT}$ = 6°C/W. Conditions that produce excessive junction temperature will activate device thermal shutdown circuitry. These conditions can be tolerated but should be avoided.
