

FEATURES

- 15 dB Gain
- Very Low Distortion
- Excellent Input/Output Match
- Low DC Power Consumption
- Good RF Stability with High VSWR Load Conditions
- RoHS-compliant Surface Mount Package Compatible with Automatic Assembly
- Repeatability of Monolithic Fabrication
- Meets Cenelec Standards
- 1 GHz Specified Performance

APPLICATIONS

- CATV Distribution Amplifier
- High Linearity CATV Amplifier

PRODUCT DESCRIPTION

The ACA1206 is a surface mount monolithic GaAs RF Linear Amplifier that has been developed to replace, in new designs, the standard CATV Hybrid amplifiers currently in use. The MMIC consist of two parallel amplifiers, each with 15 dB gain. The amplifier is optimized for exceptionally low distortion and noise

figure while providing flat gain and excellent input and output return loss for applications up to 1 GHz. The device requires single +12 V supply and is offered in a RoHS-compliant package.

Figure 1: Hybrid Application Diagram

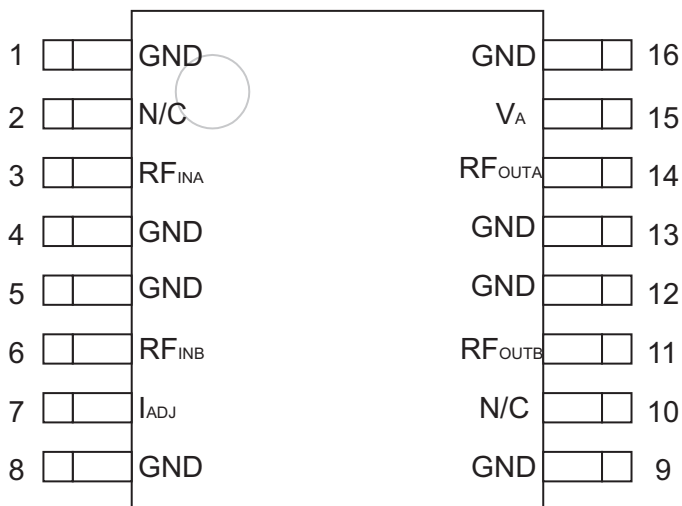

Figure 2: Pin Out

Table 1: Pin Description

PIN	NAME	DESCRIPTION	PIN	NAME	DESCRIPTION
1	GND	Ground	9	GND	Ground
2	N/C	No Connection	10	N/C	No Connection
3	RF _{INA}	Input to Amplifier A	11	RF _{OUTB}	Output from Amplifier B
4	GND	Ground	12	GND	Ground
5	GND	Ground	13	GND	Ground
6	RF _{INB}	Input to Amplifier B	14	RF _{OUTA}	Output from Amplifier A
7	I _{ADJ}	Current Adjust	15	V _A	Supply for Amplifier A
8	GND	Ground	16	GND	Ground

ELECTRICAL CHARACTERISTICS

Table 2: Absolute Mimimum and Maximum Ratings

PARAMETER	MIN	MAX	UNIT
Amplifier Supplies (pins 10, 11, 14, 15)	0	+15	VDC
RF Input Power (pins 3, 6)	-	+70	dBmV
Storage Temperature	-65	+150	°C
Soldering Temperature	-	+260	°C
Soldering Time	-	5.0	sec

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability.

Notes:

(1) Pins 3 and 6 should be AC-coupled. No external DC bias should be applied.

Table 3: Operating Ranges

PARAMETER	MIN	TYP	MAX	UNIT
RF Frequency	40	-	1000	MHz
Supply: V_{DD} (pins 10, 11, 14, 15)	-	+12	-	VDC
Operating Temperature	-40	-	+110	°C

The device may be operated safely over these conditions; however, parametric performance is guaranteed only over the conditions defined in the electrical specifications.

Table 4: Electrical Specifications
 (T_A = +25 °C, V_{DD} = +12 VDC)

APPLICATION INFORMATION

The ACA1206 is designed as an input stage. This part can be used alone for low gain, low output level applications or can be cascaded with one of the ACA0862 output stages for higher gain and

output signal drive level. The ACA1206 is a low power dissipation part designed as a driver for the ACA0862B output stage.
