The ANADIGICS DBS (Direct Broadcast Satellite) Tuner IC is intended for use in high volume, low cost manufacturing of compact DBS tuners for satellite receivers and integrated satellite ready TV/VTR receivers.

The ADC20013 Tuner IC provides DBS tuner manufacturers the ability to produce, in high volumes, tuners with low component count, minimal tuning, small size, high reliability and exceptional price-performance ratios.

The ADC20013 offers a high degree of functionality in a very small and user friendly configuration.

**NOTES**

1. Measured in ANADIGICS test fixture with Toshiba 1SV186 off-chip-varactor.
2. Includes external coupling through test fixture.
3. Oscillator output for external PLL. (Pin 14)
4. Measured at 1450 & 1750 MHz.
5. Measured using PLL (LBW =1KHz, Reference = 1.25 MHz, Step Size = 10 MHz).
6. Measured in ANADIGICS test set-up.
7. See Smith charts.
