# Panasonic

### ideas for life

Thin short type (Mounting direction: V type)

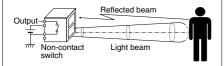

Long type (Mounting direction: V type)

#### What is area reflective type?

The sensor emits a ray of light toward the human body and detects the distance and determine whether there is a person within a given distance of the sensor. If the sensor detects a person, it sets an output non-contact switch to ON.

#### **Compliance with RoHS Directive**

#### **MOTION SENSOR** (AREA REFLECTIVE TYPE)

## MA MOTION **SENSOR Series**

#### **FEATURES**

#### 1. Now even more miniature.

The new thin type cuts 35% from the thickness of the previous short type. Device installing is now easier than ever.

Existing short type

 $W10 \times H20 \times D19.5 \text{ mm}$ 

W.394 × H.787 × D.768 inch  $\parallel$ 

Thin short type

 $W10 \times H20 \times D12.7 \text{ mm}$ 

W.394 × H.787 × D.500 inch

\*"W" and "H" are detection value measurements.

#### 2. Certain detection unaffected by the reflectance of the object

The sensor can provide stable detection that is not affected by the condition (color or material of the clothing) or parts (skin, hair, etc.) of the object being monitored. (Reflectance 18% to 90%). Excellent performance even when the detection surface is dirty.

#### 3. Only connecting DC power supply for operating

Built-in oscillation circuit type obviates the hitherto existing need for start signal

#### 4. Use in adjacent positions is possible

These sensors can be located in adjacent positions, because the timing of the external trigger signals can be adjusted so that the beam frequency of each adjacent sensor will not interfere with the other.

#### 5. Battery drive possible

By applying longer interval for the trigger signal, you can reduce the total power consumption.

#### 6. Can be used with a number of different supply voltages.

- 1) The 5V DC type (4.5 to 6.5V DC)
- 2) The free-ranging power type (6.5 to 27V DC)

They support the DC power supplies of electronic products and equipment in general.

\*The thin short type is only available for 5V DC.

#### 7. The open collector output system makes for easy load drive.

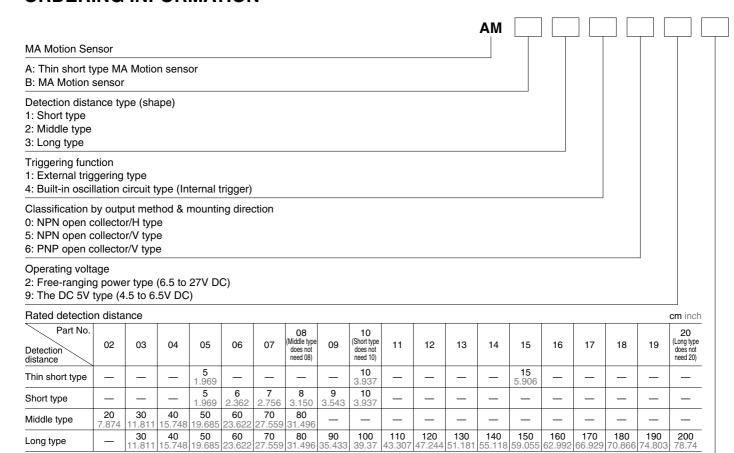

These sensors provide a continuous output during detection because the output system makes it easy to drive the load

They achieve an output performance of 30V. Built-in oscillation circuit type: 100 mA, External triggering type: 10 mA (Thin short type: 100 mA). Also, the thin short type is available in a PNP open collector type in addition to a NPN open collector type.

#### **APPLICATIONS**

- 1. Water-based product market
- · Automatic lighting of wash basin units
- Toilets
- · Automatic water flow from faucets
- 2. Stores and financial instructions
- Automatic doors
- Automatic lighting
- · Cash dispensing machines
- · Automatic teller machines
- Visitor detecting sensors
- 3. Amusement market
- · Automatic lighting for game display
- 4. Medical field
- Non-contact switch
- 5. Others
- Automatic ticket gates
- · Seat-taking sensors
- · Detection of passengers getting on and off a bus

#### ORDERING INFORMATION

#### **DETECTION DISTANCE TYPE** (distance limited)

#### 1. Thin short type (V type)

Mounting	Type	Operating	Output method	Rated detection	Part	No.	Packing	quantity

		Typical Maximum	44.882 inch 1200 mm 47.244 inch 1260 mm 49.606 inch	48.622 inch 1300 mm 51.181 inch 1365 mm	52.362 inch 1400 mm 55.118 inch 1470 mm 57.874 inch	56.102 inch 1500 mm 59.055 inch 1575 mm 62.008 inch	59.842 inch 1600 mm 62.992 inch 1680 mm	63.583 inch 1700 mm 66.929 inch 1785 mm	67.323 inch 1800 mm 70.866 inch 1890 mm 74.409 inch	71.063 inch 1900 mm 74.803 inch 1995 mm 78.543 inch	74.803 inch 2000 mm 78.74 inch 2100 mm	reflection board  Reflection rate:

Note: \* Install so that light from direct light sources does not enter the sensor (within 30° of the sensor light beam).

<sup>\*2.</sup> Install so that light from direct light sources does not enter the sensor (within 30° of the sensor light beam).

#### • For thin short type:

Standard reflection board: 100 mm 3.937 inch square area, 90% reflection rate.

#### · For short type:

Standard reflection board: 100 mm 3.937 inch square area, 90% reflection rate.

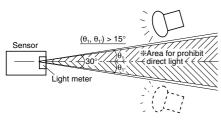

#### • For middle type:

Standard reflection board: 200 mm 7.874 inch square area, 90% reflection rate.

#### • For long type:

Standard reflection board: 500 mm 19.685 inch square area, 90% reflection rate.

<Fig. 1> [Brightness of sensor surface]

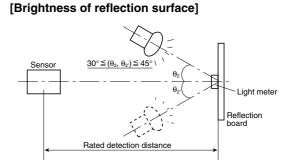

Note: Light from direct light sources (sunlight, strobe light, inverter illumination, reflected light from glass or mirrors etc.) that enters the sensor from within the prohibited range can cause the sensor to operate erroneously.

Notes: 1. Detecting an object within the maximum preset detection distance.

2. Distance deviation = 
$$\frac{a-b}{a} \times 100$$
 (%)

a: detection distance of detection target with reflectance of 90%. b: detection distance of standard detection target with reflectance of 18%.

#### 2. Absolute maximum rating (Measuring condition: ambient temp.: 25°C 77°F)

Туре	Built-in oscilla	ation circuit type	External triggering type

	Leakage current		Maximum	II	5µ	ιA	3µА			V = 30 mA	

- Notes: 1. The thin short type is only available for 5V DC.
  - The ratio between the 4 operating modes (\*a to \*d) depends on the external trigger period and detector time, and the current consumption corresponds with this varying ratio.

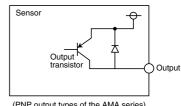

3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

4. The output transistor is open collector. The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

(NPN output types of the AMA series and all of AMB series)

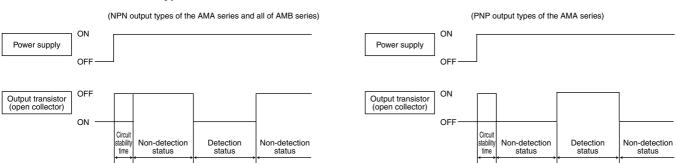

Detection status: output transistor ON Non-detection status: output transistor OFF

(PNP output types of the AMA series)

#### TIMING CHART

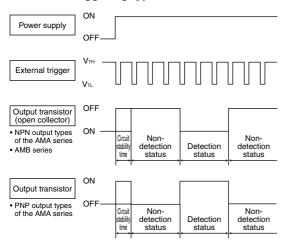

#### 1. Built-in oscillation circuit type

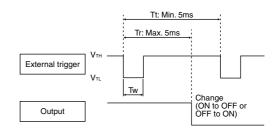

Notes: 1. Circuit stability time: Max. 12 ms

2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status

#### 2. External triggering type

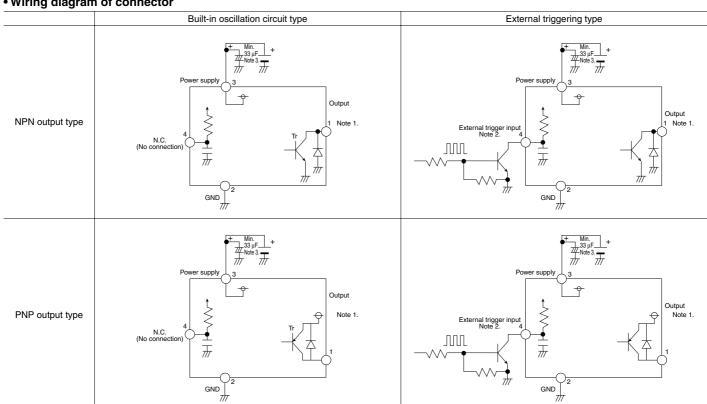

Notes: 1. Circuit stability time: Max. 12 ms

2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status

Note: The sensor recognizes at the  $V_{\text{TH}} \to V_{\text{TL}}$  edge of an external trigger that the external trigger has been input.

#### **HOW TO USE**

#### · Wiring diagram of connector

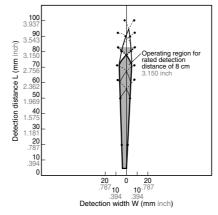

Notes: 1. The output transistor has an open collector structure.

- Detection status: Output transistor ON (connected to GND)
- Non-detection status: Output transistor OFF (open state)
- 2. The status of the external trigger input is as follows:
  - Open at the high level
- GND (less than 0.8V) at the low level
- Under no circumstances must a high-level voltage be applied.
- 3. To maintain the power supply noise performance, be certain to connect a capacitor (33µF or more) to the sensor power supply input terminal in order to stabilize

#### REFERENCE DATA

#### Operating region characteristics

How to interpret the graph
 Example: Operating area of the Short Type with rated detection distance of 8 cm 3.150 inch.

Operating area within the dotted lines

Objects that enter the entire area are detected.

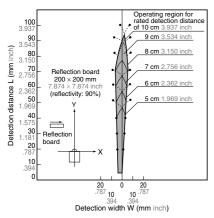

Note: If only part of the object is in the detection area, it is not

Operating area within the solid lines

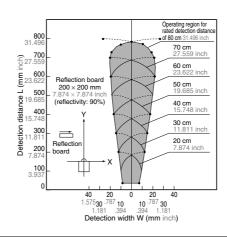

Objects that even partially enter the area are detected.

Notes: Purchase the follwing connections:

- Socket housing IL-Z-4S-S125C3 (Japan Aviation Electronic Industry, Ltd.)
- Lead wire (with metal connector at one end)

mm inch

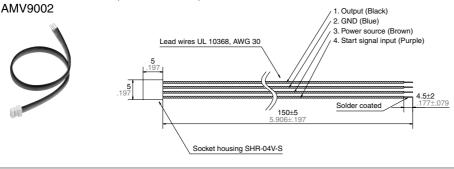

**OPTIONAL**1. Connector with cable (for AMB series)

AMV9001

Note: Mistaken cable assembly can cause damage to the internal circuits, so please check the power cord before switching ON. (Particular care must be taken as to avoid reverse connection of the power.)

Connector with cable (for AMA series) AMV9002

#### **NOTES**

#### 1. Environment

1) Avoid using the sensor in environments containing excessive amounts of steam, dust, corrosive gas, or where organic solvents are present. 2) When the sensor is used in noisy environments, connect a capacitor (minimum 33  $\mu\text{F})$  across its power input terminals.

#### 2. Wiring

- 1) Check all wiring before applying power. Incorrect wiring may damage the internal circuit (in particular, check that the connection to the power supply is not reversed.)
- 2) Avoid excessive removing and replacing of the connector.
- 3. Detector surface (Optical surface)
- 1) Keep the detector surface clean. Excessive dust or dirt on the detector surface will deteriorate the sensing performance.
- 2) Do not allow condensation or freezing to occur on the surface of the sensor. If condensation or freezing does occur at low temperatures, the sensor may not detect objects correctly.

- 3) This product is designed to detect the existence of human body. The sensor will not detect objects consisting of a low reflective material (e.g., an object coated with black rubber, etc.) or of a highly reflective material (e.g., mirror, glass, coated paper, etc.)
- 4) The front surface of the lens and case are made of polycarbonate resin and can withstand water, alcohol, oils, salts and weak acids. Other fluids such as alkalines, aromatic hydrocarbons and halogenated hydrocarbons may melt or swell the lens and case, please do not have such fluids touch the lens and case. 5) If you use the sensor with a cover or filter connected to the front of the sensor, the sensor may detect the cover itself, the
- 6) When multiple sensors are to be used side by side, please verify that there will be no mutual interference by installing them with the proper spacing, depending on the type as shown below.

detection distance can change, and

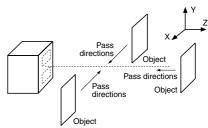

unstable operation can result.

Model number	Sensor spacing				
AMB1 series	5 cm 1.969 inch				
AMA1 series	8 cm 3.150 inch				
AMB2 series	10 cm 3.937 inch				
AMB3 series	20 cm 7.874 inch				

7) To protect the inner circuit, wiring should be max. 3 m 9.843 ft..

## 4. Recommended installation procedure

Install the photoelectric sensor so that it is orientated correctly in relation to the pass directions of the target objects as shown in the figure below.

For the general precautions, refer to the Notes for Motion Sensors on next page.
