

AN5521

TV Vertical Deflection Output IC

Overview

The AN5521 is an integrated circuit designed for TV vertical deflection output circuit. Combining with the deflection-signal processing IC, the vertical output circuit design becomes easy.

Features

- Low power consumption, direct deflection coil driving capability (Flyback voltage of two times as high as supply voltage is applied during only flyback period)
- High breakdown voltage : 60V

Pin Descriptions

Pin No.	Pin name
1	GND
2	Output
3	Supply voltage for output
4	Input
5	Trigger pulse input
6	Pulse amp. output
7	V _{CC}
