

# Picture cell driver for STN (LCD driver) for low voltage power supplies

## BU9718KV

The BU9718KV is a driver IC designed for the character-type STN liquid crystal panels which are ideal for applications such as portable devices. The number of display segments includes 32 output segments and 3 common outputs, enabling drive of up to 96 segments. A compact 48-pin QFP package with a pitch of 0.5 mm is used, enabling compact size for the set as a whole.

### ●Applications

Portable terminals (POS, ECR, PDA, and others),  
movie projectors, cameras, telephones (cordless hand-

held telephone units), and others Low-voltage power  
supply sets

### ●Features

- 1) Operates on 3V power supply.
- 2) Low current dissipation. (0.1 $\mu$ A in low power mode (actual value))
- 3) Compact package. (molded section is 7.0 mm $\square$ )
- 4) Up to 32 segment output pins and 3 common output pins are provided, enabling a total display of up to 96 segments.
- 5) 1 / 3 duty display.
- 6) Either 1 / 2 or 1 / 3 bias can be selected for power supply for LCD display.

### ●Absolute maximum ratings (Ta = 25°C, V<sub>SS</sub> = 0V)

When CS is HIGH, data can be transferred. Data is sent to the shift register at the rising edge of CK. After all of the DI data has been transferred, CS should be set to LOW. The voltage corresponding to the display data transferred at the falling edge of CS is output.

Control code table

OE	Output enable control
0	Normal operation
1	No display; all display data = 0 (internal oscillation circuit is operating)
LC	Low-power mode control
0	Normal operation
1	Low-power mode = internal oscillation circuit has stopped; segment and common output = 0
BM	Bias mode control
0	1 / 3 bias
1	1 / 2 bias

Note: The resistance values and capacitance for \*1 and \*2 should be set to match the LCD panel, and should be checked using test operation.

Make sure of the following when resetting when the power is on.

- When using the external reset terminal, make  $\overline{RST} = "L"$  at 1 ms or more with  $V_{DD}$  at 2.7V or more.
- When not using the external reset terminal,  $V_{DD}$  has to satisfy the following conditions.
