## BUH1015 BUH1015HI

## HIGH VOLTAGE FAST-SWITCHING NPN POWER TRANSISTOR

- STMicroelectronics PREFERRED SALESTYPES
- HIGH VOLTAGE CAPABILITY
- VERY HIGH SWITCHING SPEED

## APPLICATIONS:

- HORIZONTAL DEFLECTION FOR COLOUR TV AND MONITORS

## DESCRIPTION

The BUH1015 and BUH1015HI are manufactured using Multiepitaxial Mesa technology for cost-effective high performance and use a Hollow Emitter structure to enhance switching speeds.
The BUH series is designed for use in horizontal deflection circuits in televisions and monitors.

## BASE DRIVE INFORMATION

In order to saturate the power switch and reduce conduction losses, adequate direct base current $l_{B 1}$ has to be provided for the lowest gain hfe at $\mathrm{T}_{\mathrm{j}}=100^{\circ} \mathrm{C}$ (line scan phase). On the other hand, negative base current $\mathrm{I}_{\mathrm{B} 2}$ must be provided the transistor to turn off (retrace phase). Most of the dissipation, especially in the deflection application, occurs at switch-off so it is essential to determine the value of $\mathrm{I}_{\mathrm{B} 2}$ which minimizes power losses, fall time $t_{f}$ and, consequently, $\mathrm{T}_{\mathrm{j}}$. A new set of curves have been defined to give total power losses, $t_{s}$ and $t_{f}$ as a function of $I_{B 1}$ at 64 KHz scanning frequencies for choosing the

Switching Time Inductive Load at 64 KHz (see figure 2)
