

MIL-STD-1553B NOTICE 2 ADVANCED INTEGRATED MUX HYBRIDS WITH ENHANCED RT FEATURES (AIM-HY'er)

DESCRIPTION

DDC's BUS-61559 series of Advanced Integrated Mux Hybrids with enhanced RT Features (AIM-HY'er) comprise a complete interface between a microprocessor and a MIL-STD-1553B Notice 2 bus, implementing Bus Controller (BC), Remote Terminal (RX), and Monitor Terminal (MT) modes. Packaged in a single 78-pin DIP or 82-pin flat package the BUS-61559 series contains dual low-power transceivers and encoder/decoders, complete BC/RT/MT protocol logic, memory management and interrupt logic, 8K x 16 of shared static RAM, and a direct, buffered interface to a host processor bus.

The BUS-61559 includes a number of advanced features in support of MIL-STD-1553B Notice 2 and STANAG 3838. Other salient features of the BUS-61559 serve to provide the benefits of reduced board space requirements enhanced software flexibility, and reduced host processor overhead.

The BUS-61559 contains internal address latches and bidirectional data

buffers to provide a direct interface to a host processor bus. Alternatively, the buffers may be operated in a fully transparent mode in order to interface to up to 64K words of external shared RAM and/or connect directly to a component set supporting the 20 MHz STANAG-3910 bus.

The memory management scheme for RT mode prevails an option for separation of broadcast data, in compliance with 1553B Notice 2. A circular buffer option for RT message data blocks offloads the host processor for bulk data transfer applications.

Another feature besides those listed to the right, is a transmitter inhibit control for the individual bus channels.

The BUS-61559 series hybrids operate over the full military temperature range of -55 to +125°C and MIL-PRF-38534 processing is available. The hybrids are ideal for demanding military and industrial microprocessor-to-1553 applications
