

NMOS multichannel detector head C8892

Integrated low-noise driver/amplifier circuit for NMOS linear image sensor

C8892 is multichannel detector head incorporating low-noise driver/amplifier circuit developed for Hamamatsu NMOS linear image sensors. C8892 is designed especially for compactness, having an overall length as short as 40 mm or less. In addition, C8892 is designed for ease of use. It is provided with circular flange for connection to monochromator and adjustment mechanism for optical alignment for NMOS linear image sensor. The flange is interchangeable, thus facilitating connection to various models of monochromator. The housing case also provides a shielding effect against external noise. As useful options, peripheral devices are available for driving C8892, and for the output signal processing.

Features

- Low noise
- Wide dynamic range
- Operatable with simple input signals
(Only a master start pulse, a master clock pulse, ± 15 V are required.)
- Interchangeable flange
- Simple electrical and optical adjustments

Applications

- Multichannel spectrophotometry
- Optical spectrum analysis
- Time-resolved photometry

Terminal No.	Terminal name	Description
1	NC	No connection
2	Data video	Analog video signal output; positive polarity
3	+15 V	Positive power supply (25 mA)
4	-15 V	Negative power supply (15 mA)
5	NC	No connection
6	Start	Digital input signal for initializing the circuit; positive logic. Interval of these pulses equals the integration time of the sensor
7	CLK	Digital input signal for operating the circuit at the rising edge
8	EOS	Digital output signal indicating end of scan, negative logic
9	A. GND	Analog ground
10	A. GND	Analog ground
11	Shield	Case shield
12	D. GND	Digital ground
13	D. GND	Digital ground
14	D. GND	Digital ground
15	Trigger	Digital output signal for A/D conversion; positive logic

- Video data rate is 1/6 of master clock frequency (62.5 kHz Max.).
- The operation of circuit stroke length below 4.5 mm is recommended.
- The relation between data video output voltage and output charges from NMOS image sensor can be expressed by the following formula.

$$V_{out} (V) = 3 \times \frac{\text{Output charge}}{10 \times 10^{-12}[F]}$$

Note) Amplifier saturation voltage is 10 V.
