CA2111A

FM IF Amplifier-Limiter and Quadrature Detector

May 1999

Features

- Input Limiting Voltage At 10.7MHz 400 μ V
- Input Limiting Voltage At 4.5, 5.5MHz 250 μ V
- Typical AM Rejection At 10.7MHz. 45dB
- Provision for Output from 3-Stage IF Amplifier Section
- Low Harmonic Distortion
- Quadrature Detection Permits Simplified Single-Coil Tuning
- Extremely Low AFC Voltage Drift Over Full Operating Temperature Range
- Minimum Number of External Components Required

Applications

- FM IF Sound
- TV Sound IF

Description

The CA2111A provides a multistage wideband amplifier-limiter, a quadrature detector, and an emitter-follower output stage. This device is designed for use in FM receivers and in the sound IF sections of TV receivers. In addition, an output terminal is provided which allows the use of the amplifier-limiter as a straight 60dB wideband amplifier.

The amplifier-limiter features the excellent limiting characteristic of 3 cascaded differential amplifiers. The quadrature detector requires only one coil in the associated outboard circuit and therefore, tuning is a simple procedure.

A unique feature of the CA2111A is its exceptionally low AFC voltage drift over the full operating-temperature range.

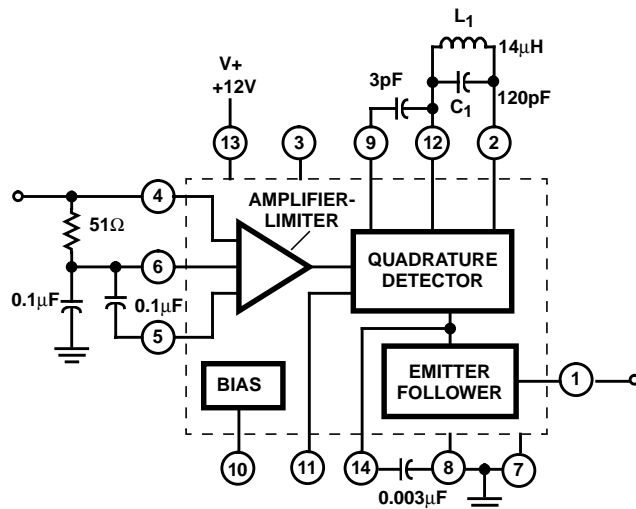

Part Number Information

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
CA2111AE	-40 to 85	14 Ld PDIP	E14.3

Pinout

Block Diagram

CA2111A

Absolute Maximum Ratings $T_A = 25^\circ\text{C}$

Supply Voltage (V_+ to V_-) 16V

Operating Conditions

Temperature Range -40°C to 85°C

Supply Voltage Range (Typical) 8V to 12V

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Thermal Information

Thermal Resistance (Typical, Note 1)

θ_{JA} ($^\circ\text{C}/\text{W}$)

PDIP Package 150

Maximum Junction Temperature (Plastic Package) 150°C

Maximum Storage Temperature Range -65°C to 150°C

Maximum Lead Temperature (Soldering 10s) 300°C

Electrical Specifications $T_A = 25^\circ\text{C}$ Unless Otherwise Specified

Test Circuit

NOTE: Input to the quadrature coil can be from either terminal 9 or terminal 10. Terminal 9 is normally used because it lessens the possibility of overloads during tuning. The use of terminal 10 increases the limiting sensitivity significantly and has been used successfully in these tests.

COMPONENT VALUES							DETECTOR TRANSFER CHARACTERISTICS	
f	L_1	C_1	R_1	Q	C_2	C_3	UPPER PEAK	LOWER PEAK
