

### Metal (Oxide) Film Resistors

Type: **ERG(X)S (Small size)**  
**(0.5 W, 1 W, 2 W, 3 W, 5 W)**  
**ERG(X)F (Anti-heat conducting for PCB)**  
**(1 W, 2 W, 3 W, 5 W)**

#### ■ Features

- Miniaturized  
50 % smaller compared to existing models
- Non-flammable
- High Reliability
- Automatic Insertion
- Reference Standards  
IEC 60115-2, IEC 60115-4, JIS C 5201-4, EIAJ RC-2138
- RoHS compliant

**Resistance Value**

The first two digits are significant figures of resistance and the third one denotes number of zeros following.  
 Decimal point is expressed by  
 (Ex.) 1R0 : 1.0 Ω

"Z" is added according to resistance.

### Hot-spot Temperature (for Reference)

The temperature of the resistor body increases with the curve below. A touching vinyl wire may cause damages to resistor element. Do not place vinyl wires around resistors and be sure to consider where the resistors will be placed.

### ⚠ Safety Precautions

The following are precautions for individual products. Please also refer to the common precautions for Fixed Resistors shown on this catalog.

#### 1. Transient voltage

If there is a possibility that the transient phenomenon (significantly high voltage applied in a short time) may occur or that a high voltage pulse may be applied, make sure to evaluate and check the characteristics of Metal(Oxide) Film Resistors (hereafter called the resistors) mounted on your product rather than only depending on the calculated power limit or steady-state conditions to complete the design or decide to use the resistors.

2. The resistors are covered with a special coating. Do not apply shock or vibration to them, or pinch them with long-nose pliers. Otherwise, the resistors may be damaged.
3. Do not apply excessive tension to the lead-connected sections. When bending the lead wire, do not apply excessive stress to the resistors and provide the wire with a natural curvature.
4. Do not brush the resistors during or after the cleaning process, which may be conducted after soldering. Otherwise, the coating film may be damaged.

### (Data for Reference)

#### ■ Pulse Characteristics (Usual)

- $P_P$  : Pulse limit power (W)
- $V_P$  : Pulse limit voltage (V)
- $\tau$  : Pulse continuous time (s)
- $T$  : Period (s)
- $V_R$  : Rated voltage (V)
- $P$  : Rated power (W)
- $R$  : Resistance value ( $\Omega$ )
- $V_{p\ max.}$  : Max. pulse limit voltage (V)

Withstand pulse limit power is calculated by the next method.

$$P_P = K \cdot P \cdot T / \tau$$

$$V_P = \sqrt{K \cdot P \cdot R \cdot T / \tau}$$

Reference to the right about a fixed number of  $V_{p\ max.}$

- $T > 1(s) \rightarrow T = 1(s)$
- $T / \tau > 100 \rightarrow T / \tau = 100$
- $P_P < P \rightarrow P$  stands for  $P_P$   
( $V_P < V_R \rightarrow V_R$  stands for  $V_P$ )

- Added voltage  $\leq V_{p\ max.}$

- $P_P$  or  $V_P$  is referent value

Conditions: Pulse added time = 1000 h

Resistance change =  $\pm 5\%$
