General Description

The G752 is a temperature sensor, Delta-Sigma analog-to-digital converter, and digital over-temperature detector with SMBus interface. The host can query the G752 at any time to read temperature. The open-drain Over temperature Shutdown (O.S.) output becomes active when the temperature exceeds a programmable limit. This pin can operate in either "Comparator" or "Interrupt" mode.

The host can program both the temperature alarm threshold (T_{OS}) and the temperature at which the alarm condition goes away (T_{HYST}). In addition, the host can read back the contents of the G752's T_{OS} and T_{HYST} registers. The sensor powers up in Comparator mode with default thresholds of 50 $^{\circ}$ C T_{OS} 45 $^{\circ}$ C T_{HYST} . for G752-1 and 80 $^{\circ}$ C T_{OS} , 75 $^{\circ}$ C T_{HYST} for G752-2.
