Description

The HA-5177/883 is a monolithic, all bipolar, precision operational amplifier, utilizing Intersil Dielectric Isolation and advance processing techniques. This design features a combination of precision input characteristics, wide gain bandwidth (2MHz) and high speed (0.5V/ μ s min) and is an improved version of the HA-5135/883.

The HA-5177/883 uses advanced matching techniques and laser trimming to produce low offset voltage (10 μ V typ, 60 μ V max) and low offset voltage drift (0.1 μ V/ $^{\circ}$ C typ, 0.6 μ V/ $^{\circ}$ C max). This design also features low voltage noise (9nV/ $\sqrt{\text{Hz}}$ typ), Low current noise (0.32pA/ $\sqrt{\text{Hz}}$ typ), nanoamp input currents, and 126dB minimum gain.

These outstanding features along with high CMRR (140dB typ, 110dB min) and high PSRR (135dB typ, 110dB min) make this unity gain stable amplifier ideal for high resolution data acquisition systems, precision integrators, and low level transducer amplifiers.

NOTES:

- Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
- Full Power Bandwidth guarantee based on Slew Rate measurement using $FPBW = \text{Slew Rate}/(2\pi V_{PEAK})$.
- Power Consumption based upon Quiescent Supply Current test maximum. (No load on outputs.)
