Combo (Spindle & VCM) Driver

HITACHI

ADE-207-182 (Z) 1st Edition July 1996

Description

This COMBO Driver for HDD application consists of Sensorless Spindle Driver and BTL type VCM Driver.

Bipolar Process is applied and a "Soft Switching Circuit" for less commutation noise and a "Booster Circuit" for smaller Saturation Voltage of Output Transistor are also implemented.

Features

Soft Switching Driver

Small Surface Mount Package: FP-80E (QFP80 Pin)

Low thermal resistance: 35°C/W with 6 layer multi glass-epoxy board

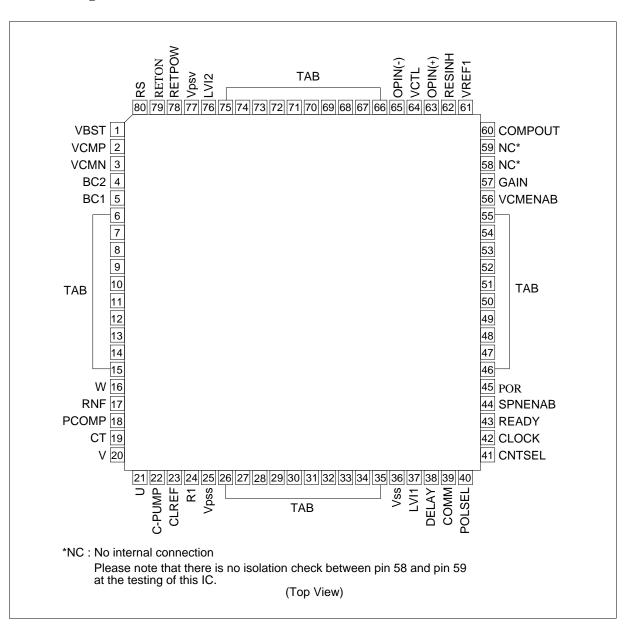

- Low output saturation voltage
 - Spindle 0.8 V Typ (@1.0 A)
 - VCM 0.8 V Typ (@0.8 A)

Functions

- 1.8 A Max/3-phase motor driver
- 1.2 A Max BTL VCM Driver
- Auto retract
- Soft Switching Matrix
- Start up circuit
- Booster
- Speed Discriminator
- Internal Protector (OTSD, LVI)
- POR
- Power monitor

Pin Arrangement

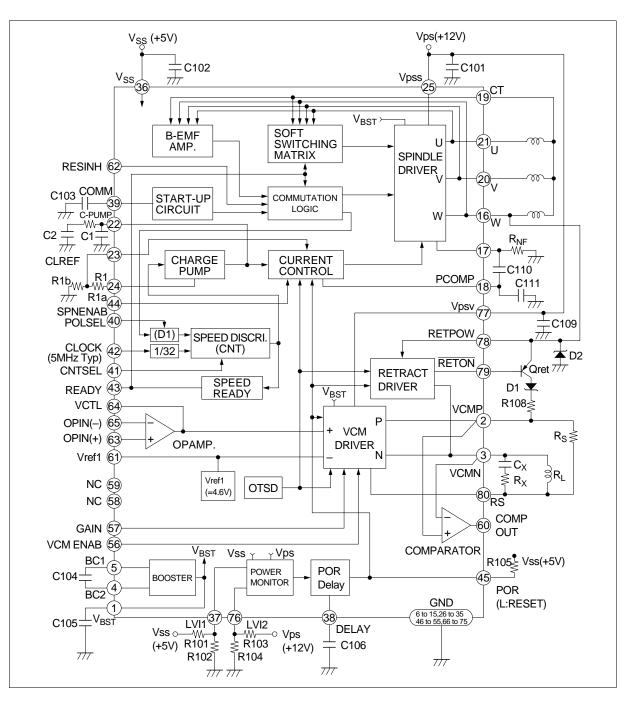

Pin Description

1 VBST Boosted voltage output to realize the low output saturation voltage 2 VCMP Output terminal on VCM driver 3 VCMN Output terminal on VCM driver 4 BC2 To be attached the external capacitor for booster circuitry 5 BC1 ditto 6 to 15 GND Ground pins 16 W W phase output terminal on spindle motor driver 17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVII Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be attached the external capacitor for setting up the oscillation frequency 41 CNTSEL To be attached the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 56 VCMENAB To select the status of VCM driver	Pin Number	Pin Name	Function
3 VCMN Output terminal on VCM driver 4 BC2 To be attached the external capacitor for booster circuitry 5 BC1 ditto 6 to 15 GND Ground pins 16 W W phase output terminal on spindle motor driver 17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins	1	VBST	Boosted voltage output to realize the low output saturation voltage
4 BC2 To be attached the external capacitor for booster circuitry 5 BC1 ditto 6 to 15 GND Ground pins 16 W W phase output terminal on spindle motor driver 17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVII Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	2	VCMP	Output terminal on VCM driver
5 BC1 ditto 6 to 15 GND Ground pins 16 W W phase output terminal on spindle motor driver 17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1	3	VCMN	Output terminal on VCM driver
6 to 15 GND Ground pins 16 W W phase output terminal on spindle motor driver 17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To select the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	4	BC2	To be attached the external capacitor for booster circuitry
16 W W phase output terminal on spindle motor driver 17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 Vss Power supply for small signal block 37 LVII Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	5	BC1	ditto
17 RNF Sensing input for output current on spindle motor driver 18 PCOMP To be attached the external capacitor for phase compensation of spindle motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	6 to 15	GND	Ground pins
PCOMP To be attached the external capacitor for phase compensation of spindle motor driver To be attached the center tap of the spindle motor for B-EMF sensing V V phase output terminal on spindle motor driver U U phase output terminal on spindle motor driver C-PUMP To be attached the external integral constants for speed control of spindle motor C-PUMP To be attached the external integral constants for speed control of spindle motor CLREF Reference voltage input for current limiter of spindle motor driver To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver Vpss Power supply for spindle motor driver GND Ground pins V _{ss} Power supply for small signal block V _{ss} Power supply for small signal block LVI1 Sensing input for power monitor circuitry BELAY To be attached the external capacitor to generate the delay time for power on reset signal COMM To be attached the external capacitor for setting up the oscillation frequency COMM To be attached the external capacitor for setting up the oscillation frequency COMSEL To be selected the input status corresponding to the pole number of spindle motor CNTSEL To select the count Number of Speed Discriminator CNTSEL To select the count Number of Speed Discriminator CLOCK Master clock input for this IC READY Output of speed lock detector for spindle motor A SPNENAB To select the status of spindle motor driver SPNENAB To select the status of spindle motor driver SPOR Output of power on reset signal for HDD system GOMENAB To select the status of VCM driver	16	W	W phase output terminal on spindle motor driver
motor driver 19 CT To be attached the center tap of the spindle motor for B-EMF sensing 20 V V phase output terminal on spindle motor driver 21 U U phase output terminal on spindle motor driver 22 C-PUMP To be attached the external integral constants for speed control of spindle motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	17	RNF	Sensing input for output current on spindle motor driver
V phase output terminal on spindle motor driver U U phase output terminal on spindle motor driver C-PUMP To be attached the external integral constants for speed control of spindle motor CLREF Reference voltage input for current limiter of spindle motor driver R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver Vpss Power supply for spindle motor driver Gnd Ground pins Ground pins Vss Power supply for small signal block Vss Power supply for small signal block PELAY To be attached the external capacitor to generate the delay time for power on reset signal COMM To be attached the external capacitor for setting up the oscillation frequency POLSEL To be selected the input status corresponding to the pole number of spindle motor CNTSEL To select the count Number of Speed Discriminator CLOCK Master clock input for this IC READY Output of speed lock detector for spindle motor To select the status of spindle motor driver SPNENAB To select the status of spindle motor driver CHORENAB To select the status of VCM driver	18	PCOMP	
U phase output terminal on spindle motor driver C-PUMP To be attached the external integral constants for speed control of spindle motor C-PUMP Reference voltage input for current limiter of spindle motor driver Reference voltage input for current limiter of spindle motor driver To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver Vpss Power supply for spindle motor driver Ground pins N _{SS} Power supply for small signal block V _{SS} Power supply for small signal block V _{SS} Power supply for small signal block DELAY To be attached the external capacitor to generate the delay time for power on reset signal COMM To be attached the external capacitor for setting up the oscillation frequency POLSEL To be selected the input status corresponding to the pole number of spindle motor To select the count Number of Speed Discriminator CLOCK Master clock input for this IC READY Output of speed lock detector for spindle motor READY Output of speed lock detector for spindle motor READY Output of power on reset signal for HDD system Ground pins CMENAB To select the status of VCM driver	19	СТ	To be attached the center tap of the spindle motor for B-EMF sensing
C-PUMP To be attached the external integral constants for speed control of spindle motor CLREF Reference voltage input for current limiter of spindle motor driver R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver Vpss Power supply for spindle motor driver GND Ground pins Vss Power supply for small signal block Vul1 Sensing input for power monitor circuitry BELAY To be attached the external capacitor to generate the delay time for power on reset signal COMM To be attached the external capacitor for setting up the oscillation frequency POLSEL To be selected the input status corresponding to the pole number of spindle motor CLOCK Master clock input for this IC READY Output of speed lock detector for spindle motor ACCIOCK Master clock input for this IC READY Output of speed lock detector for spindle motor To select the status of spindle motor driver SPNENAB To select the status of spindle motor driver GND Ground pins To select the status of VCM driver	20	V	V phase output terminal on spindle motor driver
motor 23 CLREF Reference voltage input for current limiter of spindle motor driver 24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 70 Select the status of VCM driver	21	U	U phase output terminal on spindle motor driver
24 R1 To be attached the external resistor for setting up the oscillation frequency of start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	22	C-PUMP	
start-up circuitry and the gain of speed control loop of spindle motor driver 25 Vpss Power supply for spindle motor driver 26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	23	CLREF	Reference voltage input for current limiter of spindle motor driver
26 to 35 GND Ground pins 36 V _{ss} Power supply for small signal block 37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	24	R1	
Power supply for small signal block 17 LVI1 Sensing input for power monitor circuitry 18 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 19 COMM To be attached the external capacitor for setting up the oscillation frequency 10 POLSEL To be selected the input status corresponding to the pole number of spindle motor 11 CNTSEL To select the count Number of Speed Discriminator 12 CLOCK Master clock input for this IC 13 READY Output of speed lock detector for spindle motor 14 SPNENAB To select the status of spindle motor driver 15 POR Output of power on reset signal for HDD system 16 to 55 GND Ground pins 17 Select the status of VCM driver	25	Vpss	Power supply for spindle motor driver
37 LVI1 Sensing input for power monitor circuitry 38 DELAY To be attached the external capacitor to generate the delay time for power on reset signal 39 COMM To be attached the external capacitor for setting up the oscillation frequency 40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	26 to 35	GND	Ground pins
To be attached the external capacitor to generate the delay time for power on reset signal COMM To be attached the external capacitor for setting up the oscillation frequency POLSEL To be selected the input status corresponding to the pole number of spindle motor CNTSEL To select the count Number of Speed Discriminator CLOCK Master clock input for this IC READY Output of speed lock detector for spindle motor SPNENAB To select the status of spindle motor driver SPNENAB To select the status of spindle motor driver Ground pins Ground pins To select the status of VCM driver	36	V_{ss}	Power supply for small signal block
reset signal COMM To be attached the external capacitor for setting up the oscillation frequency POLSEL To be selected the input status corresponding to the pole number of spindle motor CNTSEL To select the count Number of Speed Discriminator CLOCK Master clock input for this IC READY Output of speed lock detector for spindle motor VOMENAB To select the status of spindle motor driver Ground pins COMM To be attached the external capacitor for setting up the oscillation frequency To be attached the external capacitor for setting up the oscillation frequency To select the count Number of Speed Discriminator Description of the pole number of spindle motor To select the status of Speed Discriminator CLOCK Master clock input for this IC To select the status of spindle motor To select the status of spindle motor driver To select the status of VCM driver	37	LVI1	Sensing input for power monitor circuitry
40 POLSEL To be selected the input status corresponding to the pole number of spindle motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	38	DELAY	
motor 41 CNTSEL To select the count Number of Speed Discriminator 42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	39	COMM	To be attached the external capacitor for setting up the oscillation frequency
42 CLOCK Master clock input for this IC 43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	40	POLSEL	
43 READY Output of speed lock detector for spindle motor 44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	41	CNTSEL	To select the count Number of Speed Discriminator
44 SPNENAB To select the status of spindle motor driver 45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	42	CLOCK	Master clock input for this IC
45 POR Output of power on reset signal for HDD system 46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	43	READY	Output of speed lock detector for spindle motor
46 to 55 GND Ground pins 56 VCMENAB To select the status of VCM driver	44	SPNENAB	To select the status of spindle motor driver
56 VCMENAB To select the status of VCM driver	45	POR	Output of power on reset signal for HDD system
	46 to 55	GND	Ground pins
57 GAIN To select the Transfer conductance gm of VCM driver	56	VCMENAB	To select the status of VCM driver
	57	GAIN	To select the Transfer conductance gm of VCM driver

Pin Description (cont)

Pin Number	Pin Name	Function
58	NC	No function
59	NC	ditto
60	COMPOUT	Comparator output to detect the direction of output current on VCM driver
61	VREF1	Regulated voltage output to be used as reference of peripheral ICs
62	RESINH	Used for inhibiting the restart function of the spindle motor driver after power down
63	OPIN (+)	Non inverted input of OP.Amp. to be used for filtering the signal on PWMOUT
64	VCTL	OP. Amp. output, this signal is used as control signal for VCM driver output
65	OPIN (–)	Inverted input of OP.Amp. to be used for filtering the signal on PWMOUT
66 to 75	GND	Ground pins
76	LVI2	Sensing input for power monitor circuitry
77	Vpsv	Power supply for VCM driver
78	RETPOW	Power supply for retract circuitry
79	RETON	To be attached the base terminal of external transistor for retracting
80	RS	Sensing input for output current on VCM driver

Timing Chart

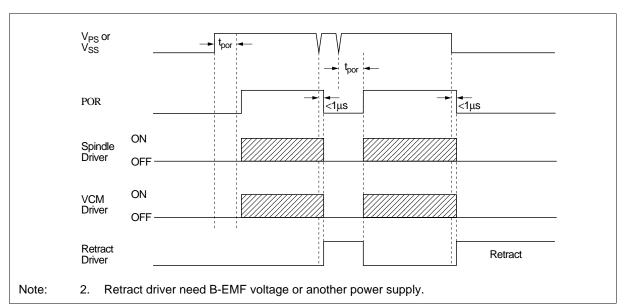

1. Power on reset (1)

Note:

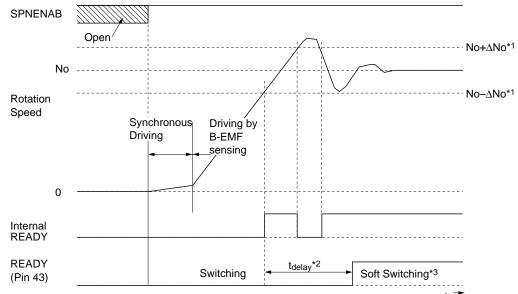

1. How to determine the threshold Voltage Vsd and the delay time t_{DLY} both are shown in the external components table.

2. Power on reset (2)

3. Motor start-up seaquence

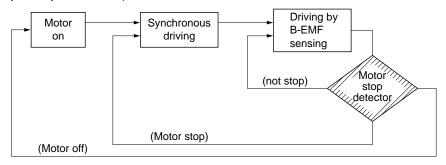

Note *1. Speed lock detection range Δ No is as follows.

*2. READY output goes to High, if the rotation speed error keeps to be less than ΔNo longer time than tdelay.

tdelay=
$$\frac{500 \cdot 10^7}{\text{fclk [Hz]}}$$
 [ms]

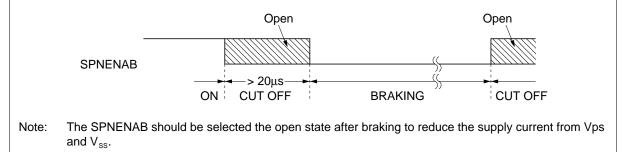

*3. The turning point of driving mode from switching synchronize to the turning point of READY output from Low to High.

(b) Retry circuitry for misstart-up

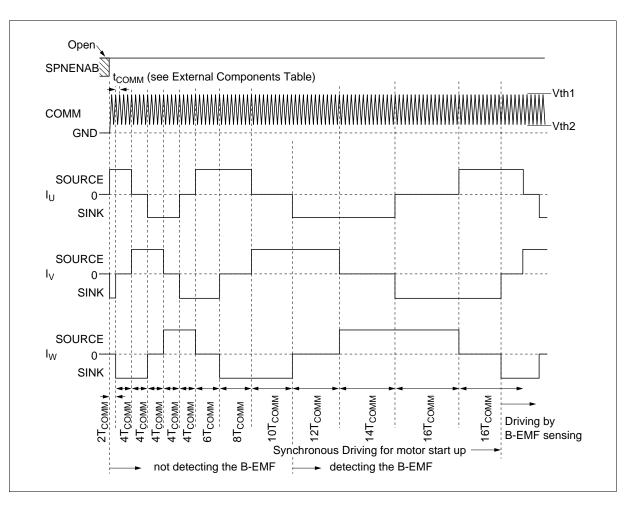

The HA13561F has the motor stop detector as shown hatching block. This function is monitoring the situation of the motor while the motor is running by B-EMF sensing. If the motor will be caused a misstarting up, the motor will be automatically restarted within 200 ms after the motor stopped. This function increase the reliability for the motor starting up.

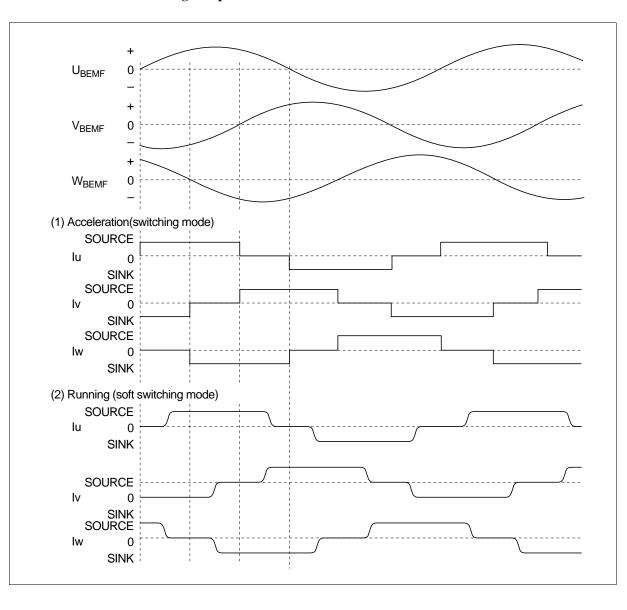

4. Braking & Shut down the Spindle Driver

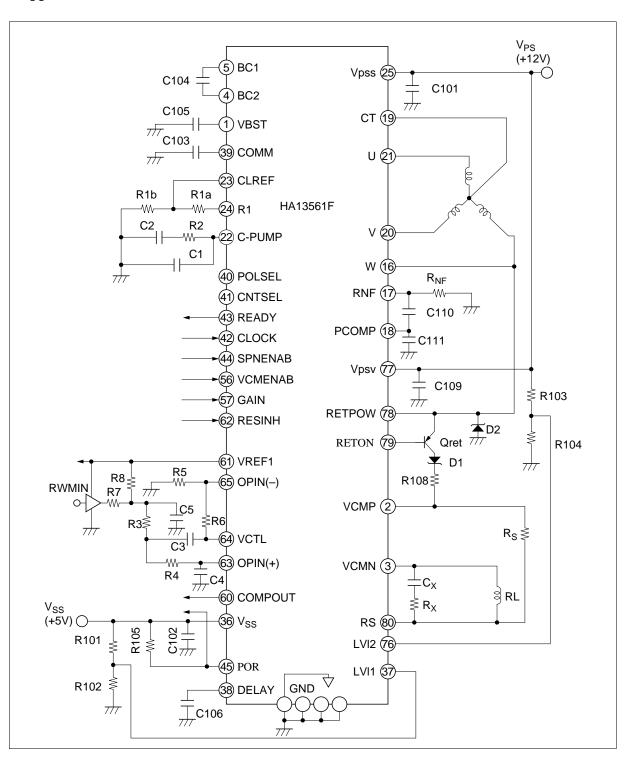

5. Start-up of the Spindle motor

6. Acceleration and Running the spindle motor

Application

External Components

Parts No. Recommended Value Purpose		Purpose	Note
R1a	(R1a + R1b) ≥ 10 kΩ	V/I converter	1, 4, 6
R1b	(R1a + R1b) ≥ 10 kΩ		
R2	_	Integral constant	3
R3 to R8	_	PWM filter	9
R101, R102	_	Setting of LVI1 voltage	7
R103, R104	_	Setting of LVI2 voltage	7
R105	5.6 kΩ	Pull up	
R108	_	Limitation for Retract current	12
RS	1.0 Ω	Current sensing for VCM Driver	10
Rnf	_	Current sensing for Spindle Driver	1
R _x	_	Reduction for gain peaking	11
C1, C2	_	Integral constant	3
C3 to C6	_	PWM filter	9
C _x	_	Reduction for gain peaking	11
C101	≥ 0.1 µF	Power supply by passing	
C102	≥ 0.1 µF	Power supply by passing	
C103	_	Oscillation for start-up	6
C104	0.22 μF	for booster	
C105	2.2 μF	for booster	
C106	_	Delay for POR	8
C109	≥ 0.1 µF	Power supply by passing	
C110, C111	0.33 μF	Phase compensation	
Qret	_	Retract Driver	12
D1	_	Protection for Qret	12
D2	TBD	Protection for parasitic phenomena	

Notes: 1. Output maximum current on spindle motor driver Ispnmax is determined by following equation.

$$Ispnmax = \frac{R1b}{R1a + R1b} \cdot \frac{V_{R1}}{R_{NF}}$$
 [A] (1)

where, V_{R1} : Reference Voltage on Pin 24 [V] (= 1.3)

2. Input clock frequency fclk on pin 42 is determined by following equation.

$$fclk = \frac{4}{5} \cdot N_O \cdot P \cdot D1 \cdot (CNT - 0.5)$$
 [Hz] (2)

where, N_o : Standard rotation speed [rpm]

P: Number of pole

D1: Dividing ratio on divider 1

D1 = 1/12 (when Pin 40 = Open) for 8 pole motor = 1/18 (when Pin 40 = Low) for 12 pole motor

CNT:Count number on speed discriminator

3. Integral constants R2, C1 and C2 can be designed as follows.

$$\omega_{O} = \frac{1}{10} \cdot 2 \cdot \pi \cdot \frac{N_{O}}{60} \qquad [rad/s]$$
 (3)

$$R2 = \frac{1}{9.55} \cdot \frac{Rnf \cdot J \cdot \omega_O \cdot N_O \cdot (R1a + R1b)}{V_{R1} \cdot K_T \cdot Gctl} \qquad [\Omega]$$

$$C1 = \frac{1}{\sqrt{10} \cdot \omega_{O} \cdot R2}$$
 [F]

$$C2 = 10 \cdot C1$$
 [F] (6)

where, J: Moment of inertia [kg•cm•s²]

K_T: Torque constant [kg•cm/A]

Gctl: Current control amp gain from pin 22 to pin 17 (= 0.5)

It is notice that rotation speed error Nerror is caused by leak current Icer2 on pin 22 and this error depend on R1a and R1b as following equation.

Nerror =
$$lcer2 \cdot \frac{(R1a + R1b)}{VR1} \cdot 100$$
 [%]

where, Icer2: leak current on pin 22 [A]

5. Oscillation period t_{COMM} on pin 39 which period determine the start up characteristics, is should be chosen as following equation.

$$t_{COMM} = \frac{1}{8} \bullet \sqrt{\frac{J}{P \bullet K_{T} \bullet Ispnmax}} \quad \text{to} \quad \frac{1}{4} \bullet \sqrt{\frac{J}{P \bullet K_{T} \bullet Ispnmax}}$$
 [s]

6. The capacitor C103 on pin 39 can be determined by $t_{\mbox{\tiny COMM}}$ and following equation.

$$C103 = \frac{1}{4} \cdot \frac{VR1}{R1a + R1b} \cdot \frac{t_{COMM}}{Vth_H - Vth_L}$$
 [F]

where, Vth_H: Threshold voltage on start up circuit [V] (= 2.0)

Vth_L: Threshold voltage on start up circuit [V] (= 0.5)

LVI operatig voltage Vsd1, Vsd2 and its hysteresis voltage Vhys1, Vhys2 can be determined by following equations.

for V_{ss}

$$Vsd1 = \left(1 + \frac{R101}{R102}\right) \cdot Vth4 \qquad [V]$$
 (10)

$$Vhys1 = \left(1 + \frac{R101}{R102}\right) \bullet Vhyspm \qquad [V]$$
 (11)

for Vps

$$Vsd2 = \left(1 + \frac{R103}{R104}\right) \bullet Vth3$$
 [V]

$$Vhys2 = \left(1 + \frac{R103}{R104}\right) \bullet Vhyspm \qquad [V]$$
 (13)

where, Vth3, Vth4: Threshold voltage on pin 37 and pin 76 [V] (= 1.39)

Vhyspm: Hysteresis voltage on pin 37 and pin 76 [mV] (= 40)

Shut down voltage Vsd1, Vsd2 can be designed by the following range.

 $Vsd1 \ge 4.25 [V], Vsd2 \ge 10 [V]$

8. The delay time $t_{\mbox{\tiny DLY}}$ of POR for power on reset is determined as follows.

$$t_{DLY} = \frac{C106 \cdot Vth5}{I_{CH3}}$$
 [s]

where, Vth4: Threshold voltage on pin 38 [V] (= 1.4)

 I_{CH3} : Charge current on pin 38 [μ A] (= 10)

 The differential voltage (Vctl – V_{REF1}) using for control of VCM driver depend on PWMDAC inputs LSB, MSB as follows.

$$VctI - V_{REF1} = 2 \cdot V_{REF1} \cdot \frac{D_{PWM} - 50}{100} \cdot \frac{R6}{R5} \cdot H_{FLT}(s)$$
(15)

where, D_{PWM}: Duty cycle on PWMIN [%]

 $H_{\text{FLT(S)}}$: Transfer function from pin 62 (PWMOUT) to pin 64 (Vctl) as shown in equation (17)

To be satisfied with above equation (15), it is notice that the ratio of R6 to R7 must be choosen as shown below.

$$\frac{R8}{R7} = 2 \cdot \frac{R6}{R5} \cdot \frac{1}{1 - \frac{R6}{R5}} \tag{16}$$

H_{FLT}(s)

where.

$$= \frac{1}{\left[1 + s \cdot \left[C5 \cdot R / / - C3 \cdot (R / / + R3) \cdot \frac{R6}{R5} + C4 \cdot (R / / + R3 + R4)\right] + s^{2} \cdot \left[C5 \cdot C4 \cdot R / / \cdot (R3 + R4) - C5 \cdot C3 \cdot R / / \cdot R3 \cdot \frac{R6}{R5} + C3 \cdot C4 \cdot R4 \cdot (R / / + R3)\right] + s^{3} \cdot C3 \cdot C4 \cdot C5 \cdot R / / \cdot R3 \cdot R4}$$
(17)

$$R// = \frac{R7 \cdot R8}{R7 \cdot R8} \tag{18}$$

If you choose the R// << R3, then equation (17) can be simplified as following equation.

$$H_{FLT}(s) = \frac{1}{1 + \frac{s}{\omega_O}} \cdot \frac{1}{1 + 2 \cdot \zeta \cdot \left(\frac{s}{\omega n}\right) + \left(\frac{s}{\omega n}\right)^2}$$
(19)

where,

$$\omega_{\rm O} = \frac{1}{\rm C5 \cdot R//} \tag{20}$$

$$\omega n = \frac{1}{\sqrt{C3 \cdot C4 \cdot R3 \cdot R4}}$$
 (21)

$$\zeta = \frac{\text{C4} \cdot (\text{R3} + \text{R4}) - \text{C3} \cdot \text{R3} \cdot \frac{\text{R6}}{\text{R5}}}{2 \cdot \sqrt{\text{C3} \cdot \text{C4} \cdot \text{R3} \cdot \text{R4}}}$$
(22)

 The relationship between the output current Ivcm and the input voltage (VctI – V_{REF1}) on VCM driver is as follows.

$$Ivcm(s) = \left(VctI - V_{REF1}\right) \bullet Kvcm \bullet \frac{1}{Rs} \bullet Hvcm(s)$$
(23)

where, Vctl: Input control voltage for VCM driver on pin 64 [V]

V_{REF1}: Reference voltage on pin 61 [V] (= 4.6)

Kvcm: DC gain of VCM driver

(= 1.82 for High gain mode)

(= 0.45 for Low gain mode)

Hvcm(s): Transfer function of VCM driver as shown following equation

$$Hvcm(s) = \frac{1}{1 + 2 \cdot \zeta_{VCM} \cdot \left(\frac{s}{\omega_{VCM}}\right) + \left(\frac{s}{\omega_{VCM}}\right)^2}$$
(24)

where,

$$\omega_{VCM} = \sqrt{\omega_{P} \cdot \frac{Rs}{Lm}}$$
 (25)

$$\zeta_{VCM} = \frac{1}{2} \cdot \left(1 + \frac{R_L}{Rs} \right) \cdot \sqrt{\frac{1}{\omega_P} \cdot \frac{Rs}{Lm}}$$
 (26)

where, ωp: Bandwidth of internal power amplifiers for VCM driver [rad/s]

 $(=3 \cdot \pi \cdot 10^6)$

Lm: Inductance of the VCM coil [H]

 R_i : Resistance of the VCM coil $[\Omega]$

and from above equations the -3 dB bandwidth f_{VCMC} of VCM driver is as following equation.

$$f_{VCMC} = \frac{\omega_{VCM}}{2 \cdot \pi} \cdot \sqrt{\left[1 - 2 \cdot \zeta_{VCM^2}\right] + \sqrt{\left[2 \cdot \zeta_{VCM^2} - 1\right]^2 + 1}}$$
(27)

11. The frequency response of VCM driver maybe have a gain peaking because of the resonation of the motor coil impedance. If you want to tune up for this characteristics, you can reduce the peaking by additional snubber circuit R_x and C_x as follows.

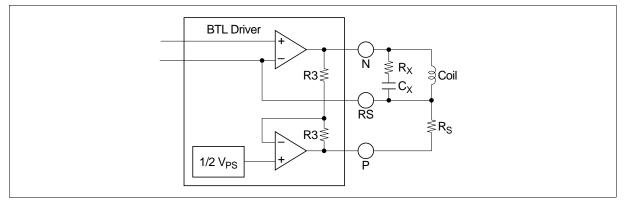

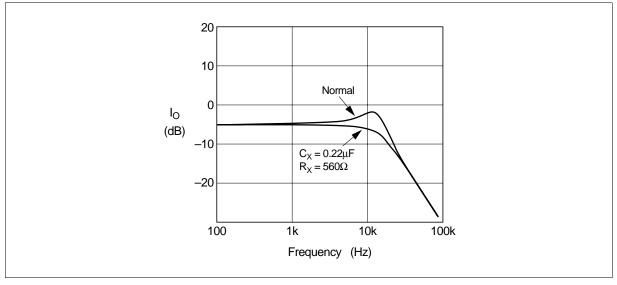

Figure 1 VCM Driver Block Diagram

(for example) $R_L = 14.7 \Omega$, $R_S = 1 \Omega$, L = 1.7 mH, Gain = L

12. The retract current Iret is determined by following equation.

$$Iret = \frac{Vretpow - Vsat(Qret) - V_F(D1) - Vsat_{VL}}{R108 + Rs + R_L}$$
(28)

where, Vretpow: Applied voltage on pin 78 [V] Vsat (Qret): Saturation voltage of Qret [V] V_F (D1): Foward voltage of D1 [V]

Absolute Maximum Ratings ($Ta = 25^{\circ}C$)

Item	Symbol		Unit	Notes
Power supply voltage	Vps	+15	V	1
Signal supply voltage	V _{SS}	+7	V	2
Input voltage	V _{IN}	V _{ss}	V	3
Output current-Spindle	lospn (Peak)	1.8	А	
	lospn (DC)	1.2	А	
Output current-VCM	lovcm (Peak)	1.2	Α	
	lovcm (DC)	0.8	А	
Power dissipation	P _T	5	W	
Junction temperature	Tj	+150	°C	
Storage temperature	Tstg	-55 to +125	°C	

Notes: 1. Operating voltage range is 10.2 V to 13.8 V.

- 2. Operating voltage range is 4.25 V to 5.75 V $\,$
- 3. Applied to Pin 40, 41, 42, 44, 56, 57 and pin 62
- 4. Operating junction temperature range is Tjop = 0°C to +125°C
- ASO of upper and lower power transistor are shown below.Operating locus must be within the ASO.
- 6. The OTSD (Over Temperature Shut Down) function is built in this IC to avoid same damages by over heat of this chip. However, please note that if the junction temperature of this IC becomes higher than the operating maximum junction temperature (Tjopmax = 125°C), the reliability of this IC often goes down.
- 7. Thermal resistance: θ j-a \leq 35°C/W with 6 layer multi glass-epoxy board.

- 1. Hitachi neither warrants nor grants licenses of any rights of Hitachi's or any third party's patent, copyright, trademark, or other intellectual property rights for information contained in this document. Hitachi bears no responsibility for problems that may arise with third party's rights, including intellectual property rights, in connection with use of the information contained in this document.
- 2. Products and product specifications may be subject to change without notice. Confirm that you have received the latest product standards or specifications before final design, purchase or use.
- 3. Hitachi makes every attempt to ensure that its products are of high quality and reliability. However, contact Hitachi's sales office before using the product in an application that demands especially high quality and reliability or where its failure or malfunction may directly threaten human life or cause risk of bodily injury, such as aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment or medical equipment for life support.
- 4. Design your application so that the product is used within the ranges guaranteed by Hitachi particularly for maximum rating, operating supply voltage range, heat radiation characteristics, installation conditions and other characteristics. Hitachi bears no responsibility for failure or damage when used beyond the guaranteed ranges. Even within the guaranteed ranges, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as failsafes, so that the equipment incorporating Hitachi product does not cause bodily injury, fire or other consequential damage due to operation of the Hitachi product.
- 5. This product is not designed to be radiation resistant.
- 6. No one is permitted to reproduce or duplicate, in any form, the whole or part of this document without written approval from Hitachi.
- 7. Contact Hitachi's sales office for any questions regarding this document or Hitachi semiconductor products.
