## Description

The HD74LVC1G53 has 2-channel analog multiplexer/demultiplexer in a 6-pin package. Applications include signal gating chopping, modulation or demodulation (modem), and signal multiplexing for analog to digital to analog conversion systems. Low voltage and high-speed operation is suitable for the battery powered products (e.g., notebook computers), and the low power consumption extends the battery life.

## Features

- The basic gate function is lined up as renesas uni logic series.
- Supply voltage range: 1.65 to 5.5 V

Operating temperature range: -40 to $+85^{\circ} \mathrm{C}$

- Control input: $\mathrm{V}_{\mathrm{IH}}($ Max. $)=5.5 \mathrm{~V}\left(@ \mathrm{~V}_{\mathrm{CC}}=0 \mathrm{~V}\right.$ to 5.5 V$)$

Notes: The absolute maximum ratings are values, which must not individually be exceeded, and furthermore no two of which may be realized at the same time.

1. The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
2. This value is limited to 5.5 V maximum.
