Octal bus transceiver with 3-state outputs

HEF40245B buffers

DESCRIPTION

The HEF40245B is an octal bus transmitter/receiver designed for 8-line asynchronous, 2-way data communication between data buses. It features output stages with high current output capability suitable for driving highly capacitive loads.

The direction input (DR) controls transmission of data from bus A to bus B, or bus B to bus A, depending on its logic level. The 3-state outputs are controlled by the enable input \overline{EO} . A HIGH on \overline{EO} causes the outputs to assume a high impedance OFF-state. The device also features hysteresis on all inputs to improve noise immunity.

Schmitt-trigger action in the inputs makes the circuit highly tolerant to slower input rise and fall times.

The HEF40245B is pin and functionally compatible with the TTL '245' device.

PINNING

A_0 to A_7	data input/output
B_0 to B_7	data input/output
DR	direction input
\overline{EO}	output enable input (active LOW)

- HEF40245BP(N): 20-lead DIL; plastic (SOT146-1)
- HEF40245BD(F): 20-lead DIL; ceramic (cerdip) (SOT152)
- HEF40245BT(D): 20-lead SO; plastic (SOT163-1)
- (): Package Designator North America

FUNCTION TABLE

INPUTS		INPUTS/OUTPUTS	
\overline{EO}	DR	A_n	B_n
L	L	A = B	input
L	H	input	B = A
H	X	Z	Z

Notes

- H = HIGH state (the more positive voltage)
L = LOW state (the less positive voltage)
X = state is immaterial
Z = high impedance OFF-state
