

HM64YLB36514 Series

16M Synchronous Late Write Fast Static RAM
(512-kword × 36-bit, Register-Latch Mode)

REJ03C0039-0001Z

Preliminary

Rev.0.10

May.15.2003

Description

The HM64YLB36514 is a synchronous fast static RAM organized as 512-kword × 36-bit. It has realized high speed access time by employing the most advanced CMOS process and high speed circuit designing technology. It is most appropriate for the application which requires high speed, high density memory and wide bit width configuration, such as cache and buffer memory in system. It is packaged in standard 119-bump BGA.

Note: All power supply and ground pins must be connected for proper operation of the device.

Features

- 2.5 V ± 5% operation and 1.5 V (V_{DDQ})
- 16M bit density
- Internal self-timed late write
- Byte write control (4 byte write selects, one for each 9-bit)
- Optional ×18 configuration
- HSTL compatible I/O
- Programmable impedance output drivers
- Differential pseudo-HSTL clock inputs
- Asynchronous \overline{G} output control
- Asynchronous sleep mode
- FC-BGA 119pin package with SRAM JEDEC standard pinout
- Limited set of boundary scan JTAG IEEE 1149.1 compatible
- Protocol: Single differential clock register-latch mode

Preliminary: The specifications of this device are subject to change without notice. Please contact your nearest Renesas Technology's Sales Dept. regarding specifications.

Pin Descriptions

Name	I/O type	Descriptions	Notes
V_{DD}	Supply	Core power supply	
V_{SS}	Supply	Ground	
V_{DDQ}	Supply	Output power supply	
V_{REF}	Supply	Input reference, provides input reference voltage	
K	Input	Clock input, active high	
\bar{K}	Input	Clock input, active low	
\bar{SS}	Input	Synchronous chip select	
\bar{SWE}	Input	Synchronous write enable	
SAn	Input	Synchronous address input	n: 0 to 18
$\bar{SWE}x$	Input	Synchronous byte write enables	x: a to d
\bar{G}	Input	Asynchronous output enable	
ZZ	Input	Power down mode select	
ZQ	Input	Output impedance control	1
DQxn	I/O	Synchronous data input/output	x: a to d n: 0 to 8
M1, M2	Input	Output protocol mode select	
TMS	Input	Boundary scan test mode select	
TCK	Input	Boundary scan test clock	
TDI	Input	Boundary scan test data input	
TDO	Output	Boundary scan test data output	
NC	—	No connection	

M1	M2	Protocol	Notes
V_{DD}	V_{SS}	Synchronous register to latch operation	2

- Notes:
1. ZQ is to be connected to V_{SS} via a resistance RQ where $175 \Omega \leq RQ \leq 300 \Omega$. If ZQ = V_{DDQ} or open, output buffer impedance will be maximum.
 2. There is 1 protocol with mode control input pins (M1, M2). These mode pins are to be tied either V_{DD} or V_{SS} respectively. These mode pins are set at power-up and will not change the states during the SRAM operates. This SRAM is tested only in the synchronous register to latch operation.

L	L	x	L	L	H	H	H	L-H	H-L	Write a byte	High-Z	D _{IN} (a) 0 to 8

Notes: 1. H: V_{IH}, L: V_{IL}, x: V_{IH} or V_{IL}

2. \overline{SWE} , SS, \overline{SWEa} to \overline{SWEd} , and SA are sampled at the rising edge of K clock.

Programmable Impedance Output Drivers

Output buffer impedance can be programmed by terminating the ZQ pin to V_{SS} through a precision resistor (RQ). The value of RQ is five times the output impedance desired. The allowable value of RQ to guarantee impedance matching with a tolerance of 15% is 250 Ω . If the status of ZQ pin is open, output impedance is maximum value. Maximum impedance also occurs with ZQ connected to V_{DDQ} . The impedance update of the output driver occurs when the SRAM is in high-Z. Write and deselect operations will synchronously switch the SRAM into and out of high-Z, therefore will trigger an update. The user may choose to invoke asynchronous \overline{G} updates by providing a \overline{G} setup and hold about the K clock, to guarantee the proper update. At power up, the output buffer is in high-Z. It will take 4,096 cycles for the impedance to be completely updated.

Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit	Notes
Input voltage on any pin	V_{IN}	-0.5 to $V_{DDQ} + 0.5$	V	1, 4
Core supply voltage	V_{DD}	-0.5 to +3.13	V	1
Output supply voltage	V_{DDQ}	-0.5 to +2.1	V	1, 4
Operating temperature	T_{OPR}	0 to +85	°C	
Storage temperature	T_{STG}	-55 to +125	°C	
Output short-circuit current	I_{OUT}	25	mA	
Latch up current	I_{LI}	200	mA	
Package junction to top thermal resistance	θ_{J-top}	6.5	°C/W	5
Package junction to board thermal resistance	$\theta_{J-board}$	12	°C/W	5

- Notes:
1. All voltage is referenced to V_{SS} .
 2. Permanent device damage may occur if absolute maximum ratings are exceeded. Functional operation should be restricted the operation conditions. Exposure to higher voltages than recommended voltages for extended periods of time could affect device reliability.
 3. These CMOS memory circuits have been designed to meet the DC and AC specifications shown in the tables after thermal equilibrium has been established.
 4. The following supply voltage application sequence is recommended: V_{SS} , V_{DD} , V_{DDQ} , V_{REF} then V_{IN} . Remember, according to the absolute maximum ratings table, V_{DDQ} is not to exceed 2.1 V, whatever the instantaneous value of V_{DDQ} .
 5. See figure below.

HM64YLB36514 Series

Note: The following DC and AC specifications shown in the tables, this device is tested under the minimum transverse air flow exceeding 500 linear feet per minute.

Recommended DC Operating Conditions (Ta = 0 to +85°C)

Parameter	Symbol	Min	Typ	Max	Unit	Notes
Power supply voltage: core	V_{DD}	2.38	2.50	2.63	V	
Power supply voltage: I/O	V_{DDQ}	1.40	1.50	1.60	V	
Input reference voltage: I/O	V_{REF}	0.70	0.75	0.80	V	1
Input high voltage	V_{IH}	$V_{REF} + 0.15$	—	$V_{DDQ} + 0.50$	V	4
Input low voltage	V_{IL}	-0.50	—	$V_{REF} - 0.15$	V	4
Clock differential voltage	V_{DIF}	0.10	—	$V_{DDQ} + 0.30$	V	2, 3
Clock common mode voltage	V_{CM}	0.90	—	1.30	V	3

- Notes:
1. Peak to peak AC component superimposed on V_{REF} may not exceed 5% of V_{REF} .
 2. Minimum differential input voltage required for differential input clock operation.
 3. See figure below.
 4. $V_{REF} = 0.75$ V (typ).

Differential Voltage / Common Mode Voltage

HM64YLB36514 Series

DC Characteristics (Ta = 0 to +85°C, V_{DD} = 2.5 V ± 5%)

Parameter	Symbol	Min	Max	Unit	Notes
Input leakage current	I _{LI}	—	2	μA	1
Output leakage current	I _{LO}	—	5	μA	2
Standby current	I _{SBZZ}	—	150	mA	3
V _{DD} operating current, excluding output drivers	I _{DD}	—	350	mA	4
Quiescent active power supply current	I _{DD2}	—	200	mA	5
Maximum power dissipation, including output drivers	P	—	2.3	W	6

Parameter	Symbol	Min	Typ	Max	Unit	Notes
Output low voltage	V _{OL}	V _{SS}	—	V _{SS} + 0.4	V	7
Output high voltage	V _{OH}	V _{DDQ} - 0.4	—	V _{DDQ}	V	8
ZQ pin connect resistance	RQ	—	250	—	Ω	
Output "Low" current	I _{OL}	(V _{DDQ} /2)/{(RQ/5) - 15%}	—	(V _{DDQ} /2)/{(RQ/5) + 15%}	mA	9, 11
Output "High" current	I _{OH}	(V _{DDQ} /2)/{(RQ/5) + 15%}	—	(V _{DDQ} /2)/{(RQ/5) - 15%}	mA	10, 11

- Notes:
1. $0 \leq V_{IN} \leq V_{DDQ}$ for all input pins (except V_{REF1}, ZQ, M1, M2 pin)
 2. $0 \leq V_{OUT} \leq V_{DDQ}$, DQ in high-Z
 3. All inputs (except clock) are held at either V_{IH} or V_{IL}, ZZ is held at V_{IH}, I_{OUT} = 0 mA. Specification is guaranteed at +75°C junction temperature.
 4. I_{OUT} = 0 mA, read 50% / write 50%, V_{DD} = V_{DD} max, frequency = min. cycle
 5. I_{OUT} = 0 mA, read 50% / write 50%, V_{DD} = V_{DD} max, frequency = 3 MHz
 6. Output drives a 12 pF load and switches every cycle. This parameter should be used by the SRAM designer to determine electrical and package requirements for the SRAM device.
 7. RQ = 250 Ω, I_{OL} = 6.8 mA
 8. RQ = 250 Ω, I_{OH} = -6.8 mA
 9. Measured at V_{OL} = 1/2 V_{DDQ}
 10. Measured at V_{OH} = 1/2 V_{DDQ}
 11. The total external capacitance of ZQ pin must be less than 7.5 pF.

HM64YLB36514 Series

AC Characteristics (Ta = 0 to +85°C, V_{DD} = 2.5 V ± 5%)

Single Differential Clock Register-Latch Mode

Sleep mode enable time	t _{ZZE}	—	15.0	ns	1, 3, 5

Notes: 1. See figure in "AC Test Conditions".

2. Parameters may be guaranteed by design, i.e., without tester guardband.

3. Transitions are measured ±50 mV of output high impedance from output low impedance.

4. Transitions are measured ±50 mV from steady state voltage.

5. When ZZ is switching, clock input K must be at the same logic level for the reliable operation.

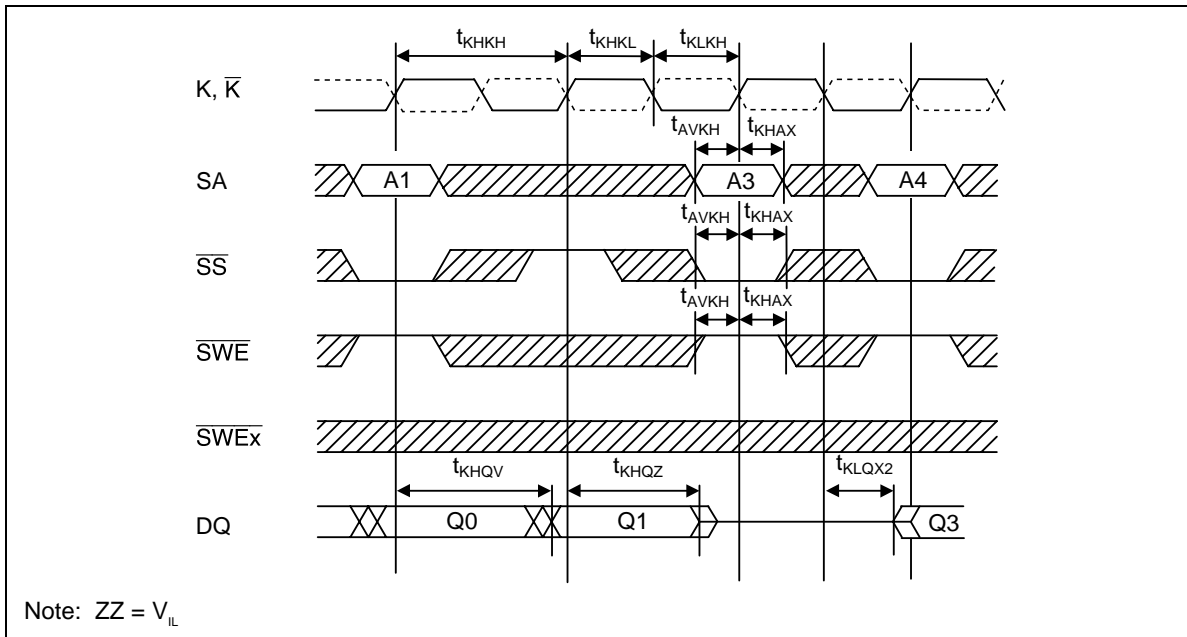

6. Minimum value is verified by design and tested without guardband.

Input Capacitance ($V_{DD} = 2.5\text{ V}$, $V_{DDQ} = 1.5\text{ V}$, $T_a = +25^\circ\text{C}$, $f = 1\text{ MHz}$)

Parameter	Symbol	Min	Max	Unit	Pin name	Notes
Input capacitance	C_{IN}	—	4	pF	SAn, SS, SWE, SWEx	1, 3
Clock input capacitance	C_{CLK}	—	5	pF	K, \bar{K}	1, 2, 3
I/O capacitance	C_{IO}	—	5	pF	DQxn	1, 3

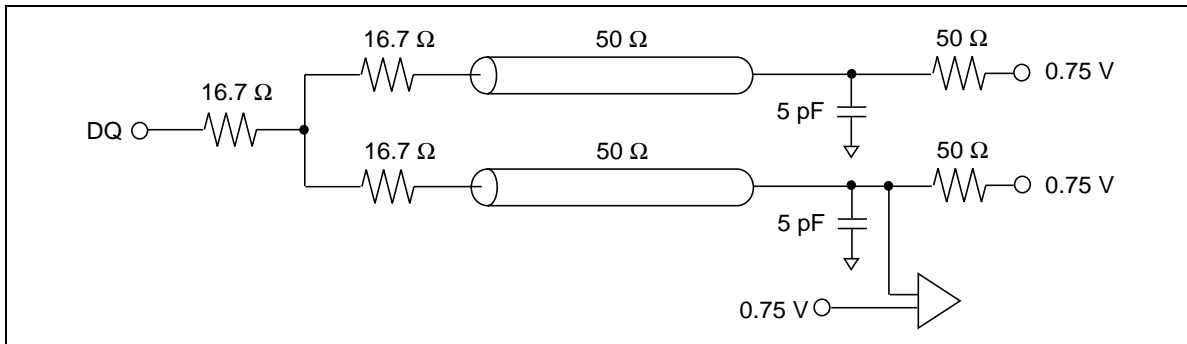

- Notes:
1. This parameter is sampled and not 100% tested.
 2. Exclude \bar{G}
 3. Connect pins to GND, except V_{DD} , V_{DDQ} , and the measured pin.

AC Test Conditions

Parameter	Symbol	Conditions	Unit	Note
Input and output timing reference levels	V_{REF}	0.75	V	
Input signal amplitude	V_{IL} , V_{IH}	0.25 to 1.25	V	
Input rise / fall time	tr, tf	0.5 (10% to 90%)	ns	
Clock input timing reference level		Differential cross point		
V_{DIF} to clock		0.75	V	
V_{CM} to clock		1.10	V	
Output loading conditions		See figure below		

Note: Parameters are tested with $R_Q = 250\ \Omega$ and $V_{DDQ} = 1.5\text{ V}$.

Output Loading Conditions

Boundary Scan Test Access Port Operations

Overview

In order to perform the interconnect testing of the modules that include this SRAM, the serial boundary scan test access port (TAP) is designed to operate in a manner consistent with IEEE Standard 1149.1 - 1990. But does not implement all of the functions required for 1149.1 compliance the HM64YLB series contains a TAP controller. Instruction register, boundary scans register, bypass register and ID register.

Test Access Port Pins

Symbol I/O	Name
TCK	Test clock
TMS	Test mode select
TDI	Test data in
TDO	Test data out

Note: This device does not have a TRST (TAP reset) pin. TRST is optional in IEEE 1149.1. To disable the TAP, TCK must be connected to V_{SS} . TDO should be left unconnected. To test boundary scan, the ZZ pin needs to be kept below $V_{REF} - 0.4 V$.

TAP DC Operating Characteristics (Ta = 0 to +85°C)

Parameter	Symbol	Min	Max	Notes
Boundary scan input high voltage	V_{IH}	1.4 V	3.6 V	
Boundary scan input low voltage	V_{IL}	-0.3 V	0.8 V	
Boundary scan input leakage current	I_{LI}	-10 μA	+10 μA	1
Boundary scan output low voltage	V_{OL}	—	0.2 V	2
Boundary scan output high voltage	V_{OH}	2.1 V	—	3
Boundary scan output leakage current	I_{LO}	-5 μA	+5 μA	4

- Notes:
- $0 \leq V_{IN} \leq 3.6 V$ for all logic input pins
 - $I_{OL} = 2 mA$ at $V_{DD} = 2.5 V$.
 - $I_{OH} = -2 mA$ at $V_{DD} = 2.5 V$.
 - $0 \leq V_{OUT} \leq V_{DD}$, TDO in high-Z

TAP AC Operating Characteristics ($T_a = 0$ to $+85^\circ\text{C}$)

Parameter	Symbol	Min	Max	Unit	Note
Test clock cycle time	t_{THTH}	67	—	ns	
Test clock high pulse width	t_{THTL}	30	—	ns	
Test clock low pulse width	t_{TLTH}	30	—	ns	
Test mode select setup	t_{MVTH}	10	—	ns	
Test mode select hold	t_{THMX}	10	—	ns	
Capture setup	t_{CS}	10	—	ns	1
Capture hold	t_{CH}	10	—	ns	1
TDI valid to TCK high	t_{DVTH}	10	—	ns	
TCK high to TDI don't care	t_{THDX}	10	—	ns	
TCK low to TDO unknown	t_{TLQX}	0	—	ns	
TCK low to TDO valid	t_{TLOV}	—	20	ns	

Note: 1. $t_{\text{CS}} + t_{\text{CH}}$ defines the minimum pause in RAM I/O pad transitions to assure pad data capture.

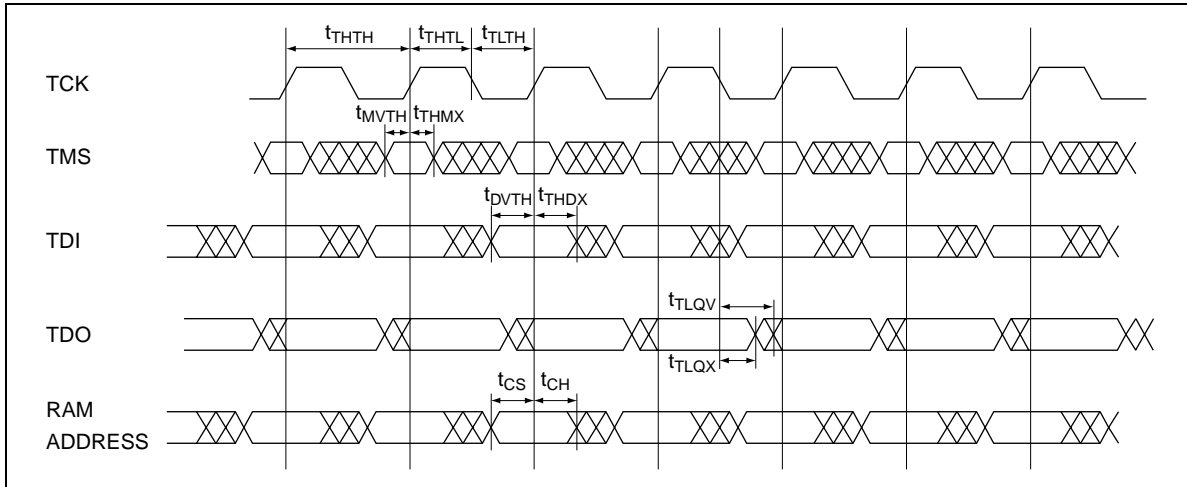

TAP AC Test Conditions ($V_{\text{DD}} = 2.5 \text{ V}$)

Temperature	$0^\circ\text{C} \leq T_a \leq +85^\circ\text{C}$
Input timing measurement reference level	1.1 V
Input pulse levels	0 to 2.5 V
Input rise/fall time	1.5 ns typical (10% to 90%)
Output timing measurement reference level	1.25 V
Test load termination supply voltage (V_T)	1.25 V
Output load	See figure below

Boundary Scan AC Test Load

TAP Controller Timing Diagram

Test Access Port Registers

Register name	Length	Symbol	Note
Instruction register	3 bits	IR [2:0]	
Bypass register	1 bit	BP	
ID register	32 bits	ID [31:0]	
Boundary scan register	70 bits	BS [70:1]	

TAP Controller Instruction Set

IR2	IR1	IR0	Instruction	Operation
0	0	0	SAMPLE-Z	Tristate all data drivers and capture the pad value
0	0	1	IDCODE	
0	1	0	SAMPLE-Z	Tristate all data drivers and capture the pad value
0	1	1	BYPASS	
1	0	0	SAMPLE	
1	0	1	BYPASS	
1	1	0	PRIVATE	Do not use. They are reserved for vendor use only
1	1	1	BYPASS	

Note: This device does not perform EXTEST, INTEST or the preload portion of the PRELOAD command in IEEE 1149.1.

HM64YLB36514 Series

- Notes:
1. Bit#1 is the first scan bit to exit the chip.
 2. The NC pads listed in this table are indeed no connects, but are represented in the boundary scan register by a "Place Holder". Place holder registers are internally connected to V_{SS} .
 3. In boundary scan mode, differential input K and \bar{K} are referenced to each other and must be at the opposite logic levels for the reliable operation.
 4. ZZ must remain V_{IL} during boundary scan.
 5. In boundary scan mode, ZQ must be driven to V_{DDQ} or V_{SS} supply rail to ensure consistent results.
 6. M1 and M2 must be driven to V_{DD} , V_{DDQ} or V_{SS} supply rail to ensure consistent results.

Keep safety first in your circuit designs!

1. Renesas Technology Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corporation product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corporation or a third party.
 2. Renesas Technology Corporation assumes no responsibility for any damage, liability, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
 3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor for the latest product information before purchasing a product listed herein.
The information described here may contain technical inaccuracies or typographical errors.
Renesas Technology Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
Please also pay attention to information published by Renesas Technology Corporation by various means, including the Renesas Technology Corporation Semiconductor home page (<http://www.renesas.com>).
 4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
 5. Renesas Technology Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
 6. The prior written approval of Renesas Technology Corporation is necessary to reprint or reproduce in whole or in part these materials.
 7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
 8. Please contact Renesas Technology Corporation for further details on these materials or the products contained therein.
