

Features

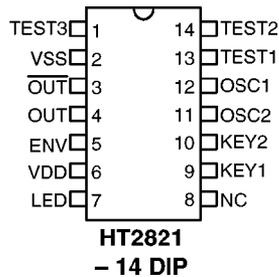

- Single power supply: 2.4V~3.3V
- Low standby current: 1 μ A (Typ.) at $V_{DD}=3V$
- Auto power-off function
- Two sections triggered by 2 input keys
- Built-in envelope control circuit
- Minimum external components
- Speaker or direct piezo application
- 1Hz~8Hz programmable LED flash output

General Description

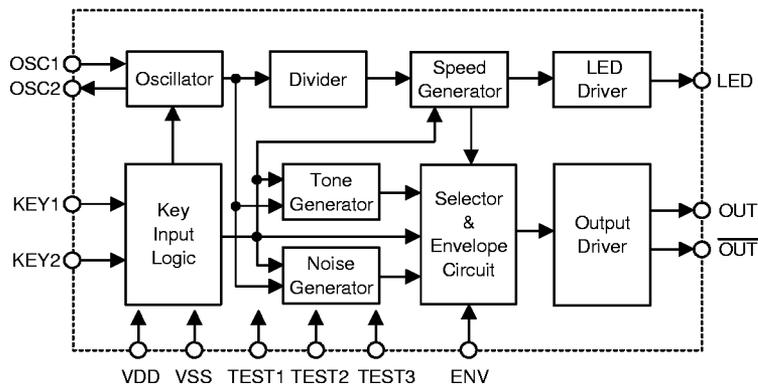

The HT2821 is a CMOS LSI chip designed for use in sound effect products. It is equipped with two sound sections, tone circuit, noise circuit, and other control logic to generate various sounds including rifle fire, machine gun fire, bombing, door bell, alarm, and so on.

Customers are required to supply their sound samples — e.g., cassette tapes, CDs etc.— that can be analyzed and programmed into the IC by changing a mask layer during device fabrication. The HT2821 is suitable for various toy applications.

Input Voltage.....	V _{SS} -0.3 to V _{DD} +0.3V	Operating Temperature.....	0°C to 70°C

*Note: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.
