

## Frequency Generator and Buffer for Pentium™ Systems

### General Description

The ICS9159-06 is a low cost frequency generator designed specifically for Pentium systems. The integrated buffer minimizes skew and provides the early CPU clock required by some chipsets such as the OPTi VIPER. A 14.318 MHz XTAL oscillator provides the reference clock to generate standard Pentium frequencies. The CPU clock makes gradual frequency transitions without violating the PLL timing of internal microprocessor clock multipliers.

Asynchronous 33.3 MHz PCI bus operation is supported, in-dependent of the CPU operating frequency. Green PC systems are supported through power-down, doze, and glitch-free stop clock modes.

### Features

- Four CPU clocks operate up to 66 MHz at 3.3V with glitch-free start and stop plus smooth transitions
- 3-6ns early CPU clock supports OPTi VIPER systems
- Selection of 8 frequencies, tristate, or power-down
- Six BUS clocks support asynchronous PCI bus operation
- ±250ps skew between synchronous outputs
- Integrated buffer outputs drive up to 30pF loads
- 3.1V -5.5V supply range
- 28-pin 300-mil SOIC package

### Applications

- Ideal for green Pentium and 486 PCI systems

### Pin Descriptions

PIN NUMBER	PIN NAME	TYPE	DESCRIPTION
8, 26	VDD	PWR	Power for logic, CPU and fixed frequency output buffers.
1	X1	IN	XTAL or external reference frequency input. This input includes XTAL load capacitance and feedback bias for a 0.5 - 20 MHz XTAL.**
2	X2	OUT	XTAL output which includes XTAL load capacitance.**
3, 11, 23	GND	PWR	Ground for logic, CPU and fixed frequency output buffers.
6, 7, 9	CPU(0:2)	OUT	Processor clock outputs which are a multiple of the input reference frequency as shown in the table.
4, 5	FS(0:1)	IN	Frequency multiplier select pins. See table. These inputs have internal pull-up devices.
20	VDDDB	PWR	Power for BUS output buffers.
15, 16, 18 19, 21, 22	BUS(0:5)	OUT	Bus clock outputs are fixed at 33.3 or 16.7 MHz.*
24, 25, 27, 28	REF(0:3)	OUT	REF is a buffered copy of the crystal oscillator or reference input clock, nominally 14.31818 MHz.*
10	ECPU	OUT	Early processor clock output which is the same frequency as CPU(0:2). This clock leads CPU(0:2) by 3-6nS.
12	DOZE#	IN	Reduces CPU, ECPU and BUS clock outputs as shown in the functionality table when at a logic low level.
13, 14	STP0#, STP1#	IN	Synchronously stops the CPU, ECPU and BUS clocks per the description in the functionality table. Can also be used to tristate all outputs when the DOZE pin is low.
17	GNCB	PWR	This ground return path is brought on separately to permit separating the noise impulses from high output buffers from affecting sensitive internal circuitry.***

\* Assuming 14.31818 MHz input clock or crystal.

\*\* Device provides 18pF load for crystal load capacitance at each pin.

\*\*\* Ground for bus clock buffers.

## Absolute Maximum Ratings

Supply Voltage .....	7.0 V
Logic Inputs .....	GND -0.5 V to $V_{DD} + 0.5$ V
Ambient Operating Temperature .....	0°C to +70°C
Storage Temperature .....	-65°C to +150°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.
