

KA79MXX

3-Terminal 0.5A Negative Voltage Regulator

Features

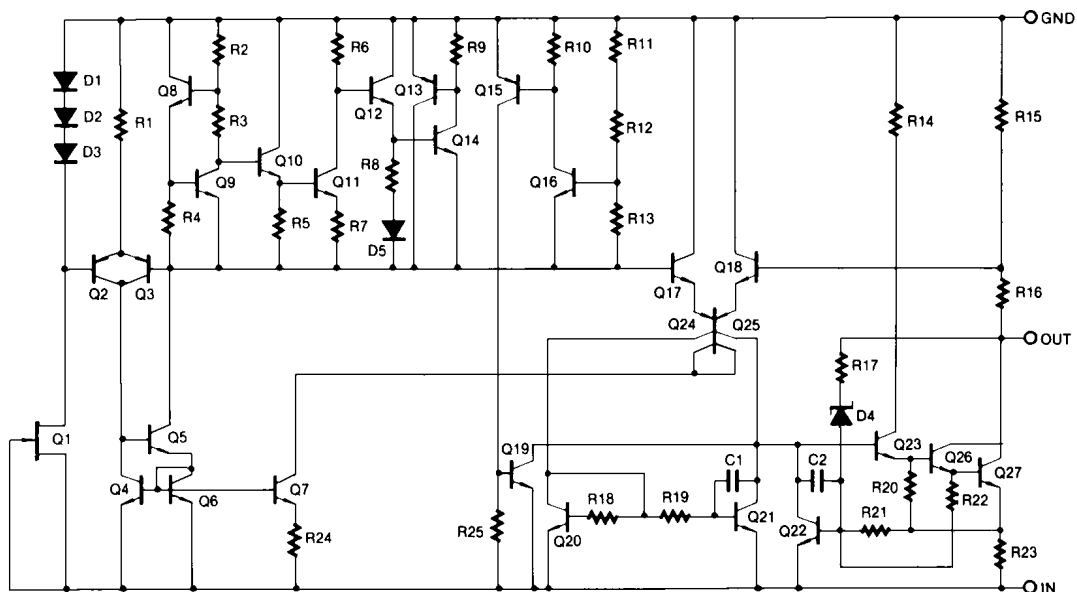

- No external components required
- Output current in excess of 0.5A
- Internal thermal overload
- Internal short circuit current limiting
- Output transistor safe area compensation
- Output voltages of -5V, -6V, -8V, -12V, -15V, -18V, -24V

Description

The KA79MXX series of 3-Terminal medium current negative voltage regulators are monolithic integrated circuits designed as fixed voltage regulators. These regulators employ internal current limiting, thermal shutdown and safe area compensation making them essentially indestructible.

Notes:

1. Required for stability. For value given, capacitor must be solid tantalum. 25µF aluminum electrolytic may be substituted.
2. C₂ improves transient response and ripple rejection. Do not increase beyond 50µF.
