

Bi-Directional DC Motor Driver

The KIA7291P/S/F are bridge driver with output voltage control.

FEATURES

- 4 Modes Available (CW/CCW/STOP/BRAKE)
- Output Current : P type 1.0A(AVE.) 2.0A(PEAK)
S/F type 0.4A(AVE.) 1.2A(PEAK)
- Wide Range of Operating Voltage : $V_{CC(opr)}=4.5\sim 20V$
: $V_{S(opr)}=0\sim 20V$
: $V_{ref(opr)}=0\sim 20V$
: $V_{ref} \leq V_S$
- Build in Thermal Shutdown, Over Current Protector and Punch-Through Current Restriction Circuit.
- Stand-by mode available (STOP MODE)
- Hysteresis for All Inputs.

NOTES

Input circuit

Input Terminals of pin ⑤ and ⑥ (KIA7291P) are all high active type and have a hysteresis of 0.7V (typ.), 3μA(typ.) of source mode input current is required.

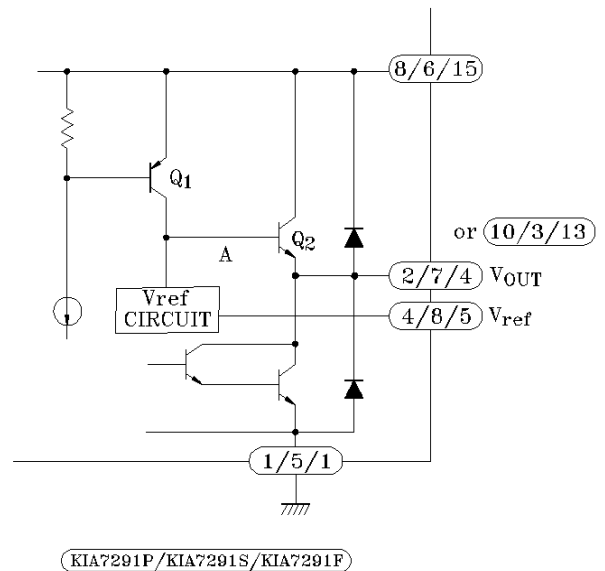

Output circuit

Output voltage is controlled by V_{ref} voltage.

Relationship between V_{OUT} and V_{ref} is

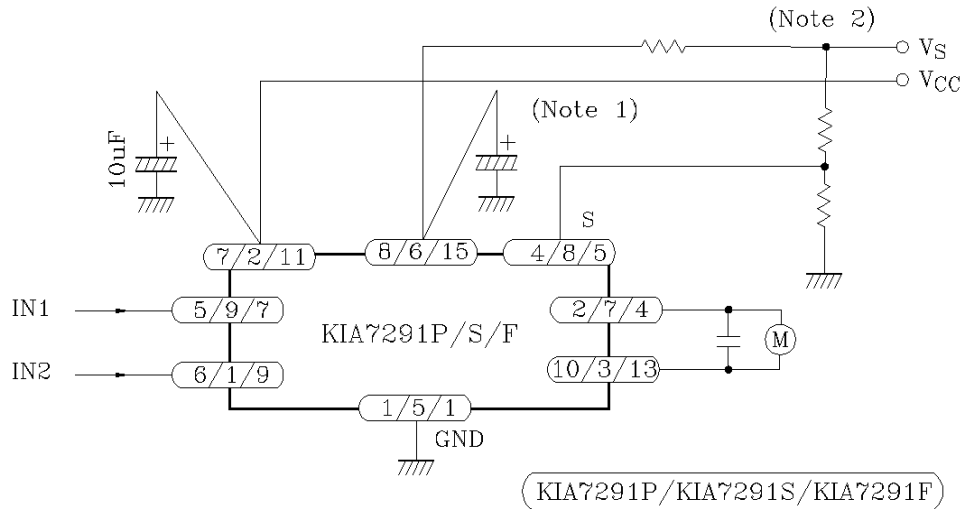

$$V_{OUT} = V_{BE} (\approx 0.7) + V_{ref}$$

V_{ref} terminal required to connect to V_S terminal for stable operation in case of no requirement of $V_{ref} \leq V_S$

KIA7291P/S/F

APPLICATION CIRCUIT

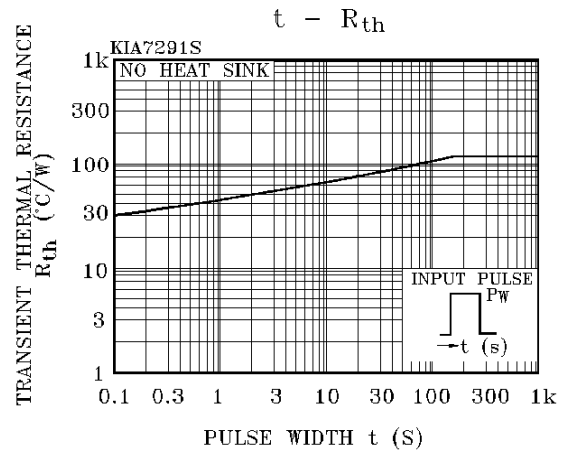

(Note1) Experiment to find the optimum capacitor value.

(Note2) To protect against excess current, current limitation resistor R should be inserted where necessary.

NOTES

- Be careful when switching the input because rush current may occur.
When switching, stop mode should be entered or current limitation resistor R should be inserted.
- The IC functions cannot be guaranteed when turning power on or off.
Before using the IC for application, check that there are no problems.
- Utmost care is necessary in the design of the output line, V_S , V_{CC} and GND line since IC may be destroyed due to short-circuit between outputs, air contamination fault, or fault by improper grounding.
