

L1186

CMOS IC

600mA CMOS LDO

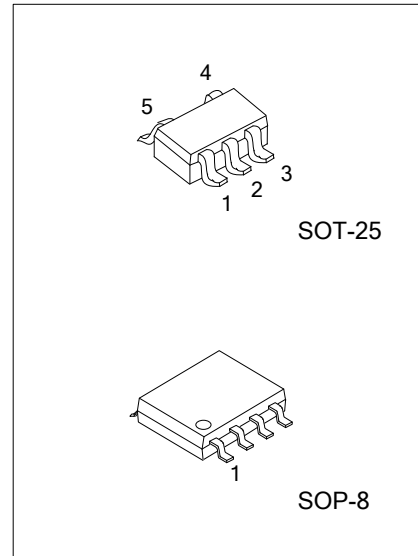

DESCRIPTION

The UTC **L1186** is a COMS positive linear regulator. One of its features is the very low quiescent current typical as low as 30µA and its dropout voltage is extremely low with 600mA output current.

The internal circuit includes thermal shutdown and current fold-back to prevent device failure when the circuit is operated in the bad conditions.

In application, the UTC **L1186** needs a low noise, regulated supply. For stable operation, the output capacitance value should be 2.2µF or more.

The UTC **L1186** is an ideal for battery applications, such as instrumentations, portable electronics, wireless devices, cordless phones, PC peripherals, and battery powered widgets.

■ TYPICAL APPLICATION CIRCUIT

Adjusted Voltage

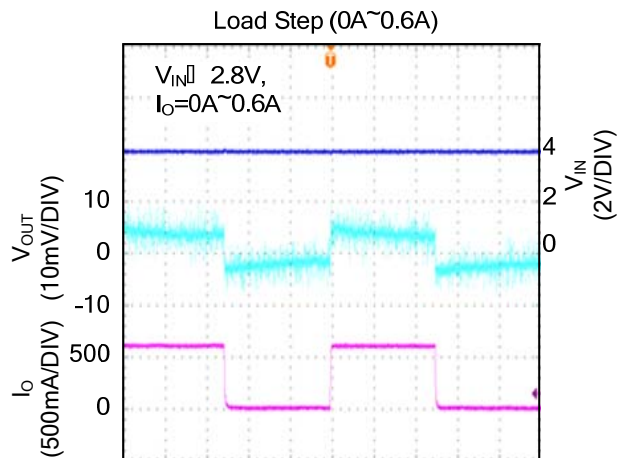

$$V_{OUT} = 1.215 (R1/R2 + 1)$$

C2 is unnecessary if $R1$ or $R2 < 20 \text{ K}\Omega$

$R1$ and $R2$ use resistance value within 1% accuracy for correct for correct V_{OUT}
