### Video, Chroma and Deflection Circuit for Color Television Sets

## Overview

The LA7625 and LA7626 are based on the LA7620 and LA7621 with the video circuit DC restoration factor changed to 100%. The LA7625 and LA7626 are small, multifunction ICs in which video, chroma and deflection circuits for NTSC color TV system are packaged in a shrink-type DIP30S (the same type as the earlier DIP22). In addition to being small, these ICs greatly reduce the number of components required and reduce the number of adjustments that must be made. By combining the LA7625 or LA7626 with the LA7555 or LA7577 VIF/SIF IC, or LA7832, LA7833, LA7837, or LA7838 vertical output IC, it is possible to process all functions of the color television signal system. Note that the LA7625 has a peak clipping circuit built into the video circuit, and is suited primarily for compact sets, while the LA7626 does not have a peak clipping circuit and is suited for larger sets.

## Package Dimensions

unit : mm

### 3061-DIP30S

## Features

- Small package
- Few peripheral components needed.
- Few adjustments needed.  
(The functions listed below require no adjustments.)
  - Chroma VCO (APC)
  - Horizontal oscillation H-Hold
  - Vertical oscillation V-Hold
- Multifunctional.

## Specifications

### Maximum Ratings at $T_a = 25\text{ }^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{16}$ max		14.0	V
Maximum supply current	$I_{22}$ max		15.0	mA
Allowable power dissipation	$P_d$ max	$T_a \leq 65\text{ }^\circ\text{C}$	1100	mW
Operating temperature	$T_{opr}$		-20 to +85	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-55 to +125	$^\circ\text{C}$
