

**DESCRIPTION**

The LXM1700/1700A series of DC/DC converters are Voltage Regulator Modules (VRM) which are specifically designed to meet or exceed the Intel VRM8.1 DC/DC Converter electrical specification as well as its mechanical outline. The LXM1700-xx/1700A-xx is guaranteed to deliver a maximum current of at least 14A. These converters maintain a total tolerance of  $\pm 5\%$  maximum, which includes load and line regulation, temperature stability, initial accuracy, load transient and ripple and noise. One of the main features of these converters is their ability to program the output voltage from 1.8 to 3.5V using a 5-bit word from the processors, providing automatic voltage adjustment for each individual processor. Other features

include high efficiency, short-circuit protection, over-voltage protection (LXM1700-xx only), under-voltage detection, soft start and logic level output enable functions.

The LXM1700-05/1700A-05 powers the processor using the 5V supply as the input power and 12V for the control bias. The LXM1700-12/1700A-12 powers the processor using only the 12V supply and does not need a separate voltage for the control bias (see Block Diagram below). The +5V or the +12V input configuration is factory set via simple jumper connections. The LXM1700-12/1700A-12 is primarily used for multiple processor applications, such as quad processor servers, where 5V supplies may not have the needed current capability.

**KEY FEATURES**

- **GUARANTEED 14.0A OUTPUT**
- TOTAL OUTPUT TOLERANCE OF LESS THAN  $\pm 5\%$  — Includes: Line & load regulation, temperature stability, initial accuracy, load transient and ripple & noise.
- ADJUSTABLE OUTPUT VOLTAGE USING A FIVE-BIT WORD (See Table 1)
- OVER-VOLTAGE DETECTION CROWBARS THE OUTPUT VOLTAGE IN THE EVENT OF PASS TRANSISTOR FAILURE - 100% PROCESSOR PROTECTION (LXM1700-xx)
- HIGH EFFICIENCY — 85% (TYP.)
- POWER GOOD SIGNAL INDICATES LOW OUTPUT VOLTAGE
- SOFT-START ELIMINATES TURN-ON OVERSHOOT
- SHORT-CIRCUIT PROTECTION
- OUTPUT ENABLE /SHUTDOWN

**APPLICATIONS**

- PENTIUM II PROCESSOR
- PENTIUM PRO PROCESSOR
- ADVANCED MICROPROCESSOR SUPPLIES

#### ELECTRICAL CHARACTERISTICS

Parameter	Symbol	Test Conditions	LXM1700-xx/1700A-xx			Units
			Min.	Typ.	Max.	
Input Voltage Range	$V_{IN}$		4.75	5	5.25	V
			11.4	12	12.6	V
Total Output Voltage Tolerance	$V_O$	3.1V Set Point	2.945	3.1	3.255	V
<i>Includes:</i> Initial Accuracy		$I_O = 0.5A, T_A = 25^\circ C$		$\pm 0.6$		%
Load Regulation		$I_O = 0.5A$ to 14.0A		15		mV
Line Regulation		0.95 $V_{IN}$ to 1.05 $V_{IN}$		1		mV
Temp. Stability		10 to 60°C		16		mV
Load Transient		$I_O = 0.5A$ to 14.0A, $V_{IN} = 5V$		95		mV
Output Ripple & Noise		$I_O = 5A$		12		mV
Output Current		$I_O$	$V_O = 3.1V$	14.0		
					0	A
Power Good Threshold	$V_{THPG}$			0.93 $V_{SET}$	V	
Power Good Output LO Voltage	$R_{LOPG}$	$I_{SINK} = 5mA$			0.4	V
Output Enable	OUTEN					
LO Level Input Voltage	$V_{OL}$	$I_{OL} = 1mA$			0.8	V
HI Level Input Voltage	$V_{OH}$	$I_{OH} = 1mA$	2			V
Turn-on Response	$T_R$	0 to 99% of $V_O$ after $V_{IN}$ reaches 90%			10	ms
Efficiency	Eff	$I_O = 14.0A$	80	85		%
		$I_O = 14.0A$	80	85		%
Over-Voltage Threshold	$V_{OV}$	$V_O = 3.1V$	3.41	3.57	3.72	V
Average Short-Circuit Current	$I_{SC}$	$V_O = 0V$		2		A
Ambient Temperature	$T_A$		0		60	°C
Required Air Flow		$I_O = 14.0A$	100			LFM
