■ USAGE PRECAUTIONS

1. Analog RGB signal input

The analog RGB signal must be input with 1.0 Vp-p or lower at a sufficiently low impedance.

2. Subcarrier input

The subcarrier input to the MB3516A supports both of a sine wave from 1.0 to 5.0 Vp-p and a pulse.

3. Board pattern design

The noise limiting capacitors to be inserted to the Vcc1 and Vcc2 pins must be connected to the GND1 and GND2 pins as closely to the pins as possible.

The patterns to be connected to the GND1 and GND2 pins must be as wide as possible to reduce parasitic impedance.
