

*MCP (Multi-Chip Package) FLASH MEMORY & SRAM*  
CMOS

# 8M (× 16) FLASH MEMORY & 2M (× 16) STATIC RAM

## MB84VD2008-10/MB84VD2009-10

### ■ FEATURES

- Power supply voltage of 2.7 to 3.6 V
- High performance  
100 ns maximum access time
- Operating Temperature  
-20 to +85°C

#### — FLASH MEMORY

- Simultaneous operations Read-while Erase or Read-while-Program
- Minimum 100,000 write/erase cycles
- Sector erase architecture  
Two 16 K byte, four 8 K bytes, two 32 K byte, and fourteen 64 K bytes.  
Any combination of sectors can be concurrently erased. Also supports full chip erase.
- Boot Code Sector Architecture  
MB84VD2008: Top sector  
MB84VD2009: Bottom sector
- Embedded Erase™ Algorithms  
Automatically pre-programs and erases the chip or any sector
- Embedded Program™ Algorithms  
Automatically writes and verifies data at specified address
- Data Polling and Toggle Bit feature for detection of program or erase cycle completion
- Ready-Busy output (RY/BY)  
Hardware method for detection of program or erase cycle completion
- Automatic sleep mode  
When addresses remain stable, automatically switch themselves to low power mode.
- Low V<sub>cc</sub> write inhibit ≤ 2.5 V
- Erase Suspend/Resume  
Suspends the erase operation to allow a read in another sector within the same device
- Please refer to "MBM29DL800TA/BA" data sheet in detailed function

#### — SRAM

- Power dissipation  
Operating : 50 mA max.  
Standby : 50 μA max.
- Data retention supply voltage: 2.0 V to 3.6 V

					H	L	HIGH-Z	D <sub>OUT</sub>	
					L	H	D <sub>OUT</sub>	HIGH-Z	
Write to SRAM	H	L	X	L	L	L	D <sub>IN</sub>	D <sub>IN</sub>	H
					H	L	HIGH-Z	D <sub>IN</sub>	
					L	H	D <sub>IN</sub>	HIGH-Z	
Flash Hardware Reset	X	H	X	X	X	X	HIGH-Z	HIGH-Z	L

**Legend:** L = V<sub>IL</sub>, H = V<sub>IH</sub>, X = V<sub>IL</sub> or V<sub>IH</sub>. See DC Characteristics for voltage levels.

- Notes:**
- Other operations except for indicated this column are inhibited.
  - $\overline{WE}$  can be V<sub>IL</sub> if  $\overline{OE}$  is V<sub>IL</sub>,  $\overline{OE}$  at V<sub>IH</sub> initiates the write operations.
  - Do not apply  $\overline{CEf} = V_{IL}$ ,  $\overline{CEs} = V_{IL}$  at a time.

Extended Sector Protect	4	XXXH	60H	SPA	60H	SPA	40H	SPA	SD	—	—	—	—

- Notes:**
1. Address bits A<sub>11</sub> to A<sub>18</sub> = X = "H" or "L" for all address commands except or Program Address (PA), Sector Address (SA), and Bank Address (BA).
  2. Bus operations are defined in Tables 2 and 3.
  3. RA = Address of the memory location to be read  
PA = Address of the memory location to be programmed  
Addresses are latched on the falling edge of the write pulse.  
SA = Address of the sector to be erased. The combination of A<sub>18</sub>, A<sub>17</sub>, A<sub>16</sub>, A<sub>15</sub>, A<sub>14</sub>, A<sub>13</sub>, and A<sub>12</sub> will uniquely select any sector.  
BA = Bank Address (A<sub>16</sub> to A<sub>18</sub>)
  4. RD = Data read from location RA during read operation.  
PD = Data to be programmed at location PA. Data is latched on the falling edge of write pulse.
  5. SPA = Sector address to be protected. Set sector address (SA) and (A<sub>6</sub>, A<sub>1</sub>, A<sub>0</sub>) = (0, 1, 0).  
SD = Sector protection verify data. Output 01H at protected sector addresses and output 00H at unprotected sector addresses.
- \* : This command is valid while Fast Mode.

# MB84VD2008-10/MB84VD2009-10

## ■ ABSOLUTE MAXIMUM RATINGS

Storage Temperature .....	-55°C to +125°C
Ambient Temperature with Power Applied .....	-25°C to +85°C
Voltage with Respect to Ground All pins (Note) .....	-0.3 V to $V_{ccf} + 0.5$ V
	-0.3 V to $V_{ccs} + 0.5$ V
$V_{ccf}/V_{ccs}$ Supply (Note) .....	-0.3 V to +4.6 V

**Note:** Minimum DC voltage on input or I/O pins are -0.5 V. During voltage transitions, inputs may negativeovershoot  $V_{ss}$  to -2.0 V for periods of up to 20 ns. Maximum DC voltage on output and I/O pins are  $V_{ccf} + 0.5$  V or  $V_{ccs} + 0.5$  V. During voltage transitions, outputs may positive overshoot to  $V_{cc} + 2.0$  V for periods of up to 20 ns.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## ■ RECOMMENDED OPERATING RANGES

Commercial Devices

Ambient Temperature ( $T_A$ ) .....	-20°C to +85°C
$V_{ccf}/V_{ccs}$ Supply Voltages .....	+2.7 V to +3.6 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

**Note** : 1. This does not include the preprogramming time.

2. This timing is for Sector Protection Operation.

• Write Cycle (WE control) (Flash)

- Notes:**
1. PA is address of the memory location to be programmed.
  2. PD is data to be programmed at byte address.
  3.  $\overline{DQ}_7$  is the output of the complement of the data written to the device.
  4. DOUT is the output of the data written to the device.
  5. Figure indicates last two bus cycles out of four cycle sequence
  6. These waveforms are for the x16 mode. The addresses differ from x8 mode.

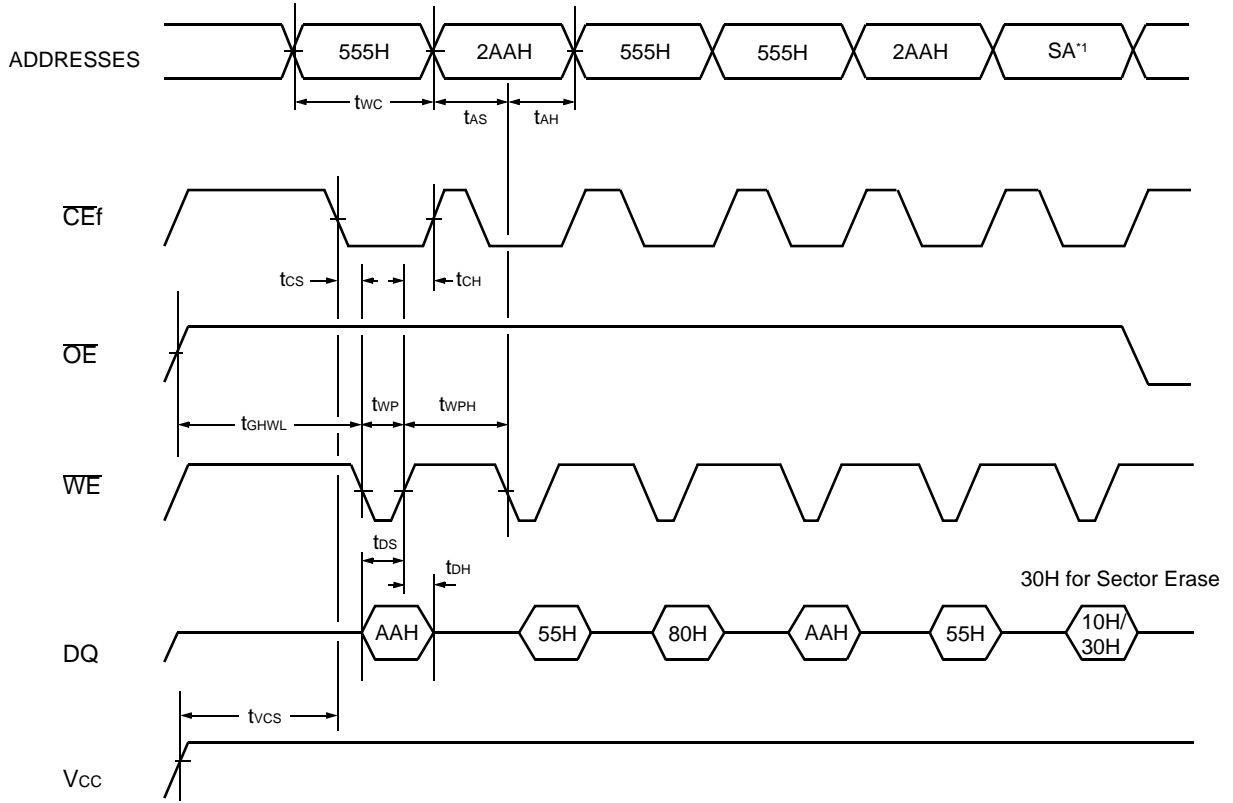

• Write Cycle ( $\overline{CEf}$  control) (Flash)

- Notes:**
1. PA is address of the memory location to be programmed.
  2. PD is data to be programmed at byte address.
  3.  $\overline{DQ}_7$  is the output of the complement of the data written to the device.
  4.  $D_{OUT}$  is the output of the data written to the device.
  5. Figure indicates last two bus cycles out of four bus cycle sequence
  6. These waveforms are for the x16 mode. The addresses differ from x8 mode.

## • AC Waveforms Chip/Sector Erase Operations (Flash)

- Notes:**
1. SA is the sector address for Sector Erase. Addresses = 555H for Chip Erase.
  2. These waveforms are for the x16 mode. The addresses differ from x8 mode.

## • Write Cycle (SRAM)

Parameter Symbol	Parameter Description	Min.	Max.	Unit
$t_{WC}$	Write Cycle Time	85	—	ns
$t_{WP}$	Write Pulse Width	60	—	ns
$t_{CW}$	Chip Enable to End of Write	75	—	ns
$t_{\overline{UB}, \overline{LB}}$	$\overline{UB}, \overline{LB}$ Valid to End of Write	55	—	ns
$t_{AS}$	Address Setup Time	0	—	ns
$t_{WR}$	Write Recovery Time	0	—	ns
$t_{ODW}$	$\overline{WE}$ Low to Output High-Z	—	35	ns
$t_{OEW}$	$\overline{WE}$ High to Output Active	0	—	ns
$t_{DS}$	Data Setup Time	35	—	ns
$t_{DH}$	Data Hold Time	0	—	ns

## • Write Cycle (Note 4) ( $\overline{WE}$ control) (SRAM)

- Notes:**
2. If  $\overline{CEs}$  goes LOW coincident with or after  $\overline{WE}$  goes LOW, the output will remain at high impedance.
  3. If  $\overline{CEs}$  goes HIGH coincident with or before  $\overline{WE}$  goes HIGH, the output will remain at high impedance.
  4. If  $\overline{OE}$  is HIGH during the write cycle, the outputs will remain at high impedance.
  5. Because I/O signals may be in the output state at this Time, input signals of reverse polarity must not be applied.

• Write Cycle (Note 4) ( $\overline{CE}$ s control) (SRAM)

- Notes:**
2. If  $\overline{CE}$ s goes LOW coincident with or after  $\overline{WE}$  goes LOW, the output will remain at high impedance.
  3. If  $\overline{CE}$ s goes HIGH coincident with or before  $\overline{WE}$  goes HIGH, the output will remain at high impedance.
  4. If  $\overline{OE}$  is HIGH during the write cycle, the outputs will remain at high impedance.
  5. Because I/O signals may be in the output state at this Time, input signals of reverse polarity must not be applied.

# MB84VD2008-10/MB84VD2009-10

## • Write Cycle (Note 4) ( $\overline{UB}$ , $\overline{LB}$ Control) (SRAM)

- Notes:**
2. If  $\overline{CEs}$  goes LOW coincident with or after  $\overline{WE}$  goes LOW, the output will remain at high impedance.
  3. If  $\overline{CEs}$  goes HIGH coincident with or before  $\overline{WE}$  goes HIGH, the output will remain at high impedance.
  4. If  $\overline{OE}$  is HIGH during the write cycle, the outputs will remain at high impedance.
  5. Because I/O signals may be in the output state at this Time, input signals of reverse polarity must not be applied.

## ■ ERASE AND PROGRAMMING PERFORMANCE (Flash)

Parameter	Limits			Unit	Comment
	Min.	Typ.	Max.		
Sector Erase Time	—	1	10	sec	Excludes programming time prior to erasure
Byte Programming Time	—	8	300	μs	Excludes system-level overhead
Word Programming Time	—	16	360	μs	
Chip Programming Time	—	8.4	TBD	sec	Excludes system-level overhead
Erase/Program Cycle	100,000	—	—	cycles	

## ■ DATA RETENTION CHARACTERISTICS (SRAM)

Parameter Symbol	Parameter Description	Min.	Typ.	Max.	Unit
V <sub>DH</sub>	Data Retention Supply Voltage	2.0	—	3.6	V
I <sub>DDS2</sub>	Standby Current	—	—	50*	μA
t <sub>CDR</sub>	Chip Deselect to Data Retention Mode Time	0	—	—	ns
t <sub>R</sub>	Recovery Time	5	—	—	ms

\* : 5 μA (Max.) at T<sub>A</sub> = -20°C to +40°C

### • $\overline{CE}$ s Controlled Data Retention Mode

**Notes:1.)** When  $\overline{CE}$  is operating at the V<sub>IH</sub> min. level (2.2 V), the standby current is given by I<sub>SB1S</sub> during the transition of V<sub>CCS</sub> from 3.6 to 2.2 V.

## ■ PIN CAPACITANCE

Parameter Symbol	Parameter Description	Test Setup	Typ.	Max.	Unit
C <sub>IN</sub>	Input Capacitance	V <sub>IN</sub> = 0	TBD	TBD	pF
C <sub>OUT</sub>	Output Capacitance	V <sub>OUT</sub> = 0	TBD	TBD	pF
C <sub>IN2</sub>	Control Pin Capacitance	V <sub>IN</sub> = 0	TBD	TBD	pF

**Note:** Test conditions T<sub>A</sub> = 25°C, f = 1.0 MHz

## ■ HANDRING OF PACKAGE

Please handle this package carefully since the sides of packages are right angle.

## ■ CAUTION

- 1.)The high voltage (VID) can not apply to address pins and control pins except **RESET**. Therefore, it can not use autoselect and sector protect function by applying the high voltage (VID) to specific pins.
- 2.)For the sector protection, since the high voltage (VID) can be applied to the **RESET**, it can be protected the sector useing "Extended sector protect" command.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

#### **CAUTION:**

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
