MB90346CE(S)/F346E(S)/F346CE(S)/347E(S)/347CE(S)/F347E(S)/F347CE(S)/348E(S)/348CE(S)/  
MB90349E(S)/349CE(S)/F349E(S)/F349CE(S)/V340E-101/V340E-102

### ■ DESCRIPTION

The MB90340E series with up to 2 FULL-CAN interfaces is especially designed for automotive and other industrial applications. Its main feature are the on-board CAN Interfaces, which conform to V2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal full CAN approach.

The power to the MCU core (3 V) is supplied by a built-in regulator circuit, giving these microcontrollers superior performance in terms of power consumption and tolerance to EMI.

Note : F<sup>2</sup>MC is the abbreviation of FUJITSU Flexible Microcontroller.

For the information for microcontroller supports, see the following web site.

This web site includes the "**Customer Design Review Supplement**" which provides the latest cautions on system development and the minimal requirements to be checked to prevent problems before the system development.

# MB90340E Series

## ■ FEATURES

### • CPU

- Instruction system best suited to controller
  - Wide choice of data types (bit, byte, word, and long word)
  - Wide choice of addressing modes (23 types)
  - Enhanced functionality with signed multiply and divide instructions and the RETI instruction
  - Enhanced high-precision computing with 32-bit accumulator
- Instruction system compatible with high-level language (C language) and multitask
  - Employing system stack pointer
  - Various enhanced pointer indirect instructions
  - Barrel shift instructions
- Increased processing speed
  - 4-byte instruction queue

### • Serial interface

- LIN-UART : 4 channels
  - Equipped with full-duplex double buffer
  - Clock-asynchronous or clock-synchronous serial transmission is available
- I<sup>2</sup>C interface : 2 channels (only for devices with a C suffix in the part number)
  - Up to 400 kbps transfer rate

### • Interrupt controller

- Powerful 8-level, 34-condition interrupt feature
- Up to 16 external interrupts are supported
- Automatic data transfer function independent of CPU
  - Expanded intelligent I/O service function (EI<sup>2</sup>OS) : up to 16 channels

### • I/O ports

- General-purpose input/output port (CMOS output)
  - 80 ports (for devices without an S suffix in the part number - i.e. devices that support the sub clock)
  - 82 ports (for devices with an S suffix in the part number - i.e. devices that do not support the sub clock)

### • 8/10-bit A/D converter

- 16 channels (only for devices without a C suffix in the part number)
- 24 channels (only for devices with a C suffix in the part number)
- Resolution is selectable between 8-bit and 10-bit.
- Activation by external trigger input is allowed.
- Conversion time : 3 μs (at 24 MHz machine clock, including sampling time)

### • Address match detection (program patch) function

- Detects address matches against 6 address pointers

### • Timer

- Time-base timer, watch timer, watchdog timer : 1 channel
- 8/16-bit PPG timer : 8-bit × 16 channels, or 16-bit × 8 channels
- 16-bit reload timer : 4 channels
- 16-bit input/output timer
  - 16-bit free-run timer : 2 channels  
(FRT0 : ICU 0/1/2/3, OCU 0/1/2/3, FRT1 : ICU 4/5/6/7, OCU 4/5/6/7)
  - 16-bit input capture: (ICU): 8 channels
  - 16-bit output compare: (OCU): 8 channels

(Continued)

*(Continued)*

- **Full-CAN controller**

- Up to 2 channels
- Compliant with Ver2.0A and Ver2.0B CAN specifications
- 16 built-in message buffers
- CAN wake-up function

- **Low power consumption (standby) mode**

- Sleep mode (a mode that halts CPU operating clock)
- Timebase timer mode (a mode where only the oscillation clock, sub clock, timebase timer and watch timer operate)
- Watch mode (a mode that operates sub clock and watch timer only)
- Stop mode (a mode that stops oscillation clock and sub clock)
- CPU intermittent operation mode

- **Clock modulation circuit**

- **Technology**

- CMOS technology

Part Number	MB90V340E-101, MB90V340E-102	MB90F342E(S), MB90F342CE(S), MB90F345E(S), MB90F345CE(S), MB90F346E(S), MB90F346CE(S), MB90F347E(S), MB90F347CE(S), MB90F349E(S), MB90F349CE(S)	MB90341E(S), MB90341CE(S), MB90342E(S), MB90342CE(S), MB90346E(S), MB90346CE(S), MB90347E(S), MB90347CE(S), MB90348E(S), MB90348CE(S), MB90349E(S), MB90349CE(S)
A/D Converter	24 input channels	Devices with a C suffix in the part number : 24 channels Devices without a C suffix in the part number : 16 channels	
		10-bit or 8-bit resolution Conversion time : Min 3 $\mu$ s include sample time (per one channel)	
16-bit Reload Timer (4 channels)	Operation clock frequency : $f_{sys}/2^1$ , $f_{sys}/2^3$ , $f_{sys}/2^5$ ( $f_{sys}$ = Machine clock frequency) Supports External Event Count function		
16-bit Free-run Timer (2 channels)	Generates an interrupt signal on overflow Supports Timer Clear when the output compare finds a match Operation clock freq. : $f_{sys}$ , $f_{sys}/2^1$ , $f_{sys}/2^2$ , $f_{sys}/2^3$ , $f_{sys}/2^4$ , $f_{sys}/2^5$ , $f_{sys}/2^6$ , $f_{sys}/2^7$ ( $f_{sys}$ = Machine clock freq.) Free-run Timer 0 (clock input FRCK0) corresponds to ICU 0/1/2/3, OCU 0/1/2/3 Free-run Timer 1 (clock input FRCK1) corresponds to ICU 4/5/6/7, OCU 4/5/6/7		
16-bit Output Compare (8 channels)	Generates an interrupt signal when one of the 16-bit free-run timer matches the output compare register A pair of compare registers can be used to generate an output signal.		
16-bit Input Capture (8 channels)	Captures the value of the 16-bit free-run timer and generates an interrupt when triggered by a pin input (rising edge, falling edge, or both rising and falling edges).		
8/16-bit Programmable Pulse Generator	8 channels (16-bit) /16 channels (8-bit) Sixteen 8-bit reload counters Sixteen 8-bit reload registers for L pulse width Sixteen 8-bit reload registers for H pulse width		
	Supports 8-bit and 16-bit operation modes A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler plus 8-bit reload counter Operating clock freq. : $f_{sys}$ , $f_{sys}/2^1$ , $f_{sys}/2^2$ , $f_{sys}/2^3$ , $f_{sys}/2^4$ or 128 $\mu$ s@ $f_{osc}$ = 4 MHz ( $f_{sys}$ = Machine clock frequency, $f_{osc}$ = Oscillation clock frequency)		
CAN Interface	3 channels	2 channels : MB90F342E(S), MB90F342CE(S), MB90F345E(S), MB90F345CE(S) 1 channel : MB90F346E(S), MB90F346CE(S), MB90F347E(S), MB90F347CE(S), MB90F349E(S), MB90F349CE(S)	2 channels : MB90341E(S), MB90341CE(S), MB90342E(S), MB90342CE(S) 1 channel : MB90346E(S), MB90346CE(S), MB90347E(S), MB90347CE(S), MB90348E(S), MB90348CE(S), MB90349E(S), MB90349CE(S)
	Conforms to CAN Specification Version 2.0 Part A and B Automatic re-transmission in case of error Automatic transmission in response to Remote Frames Prioritized 16 message buffers for data and ID's Supports multiple messages Flexible configuration of acceptance filtering : Full bit compare/Full bit mask/Two partial bit masks Supports up to 1 Mbps

## ■ PIN DESCRIPTION

Pin No.		Pin name	I/O Circuit type*3	Function
QFP100*1	LQFP100*2			
1 to 4	99 to 2	P24 to P27	G	General purpose I/O pins. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
		A20 to A23		Output pins of the external address bus. When the corresponding bit in the external address output control register (HACR) is 0, the pins are enabled as high address output pins (A20 to A23).
		IN0 to IN3		Trigger input pins for input captures.
5	3	P30	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		ALE		Address latch enable output pin. This function is enabled when the external bus is enabled.
		IN4		Trigger input pin for input capture.
6	4	P31	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		$\overline{RD}$		External read strobe output pin. This function is enabled when the external bus is enabled.
		IN5		Trigger input pin for input capture.
7	5	P32	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or when the $\overline{WR}/\overline{WRL}$ pin output is disabled.
		$\overline{WR} / \overline{WRL}$		Write strobe output pin for the external data bus. This function is enabled when both the external bus and the $\overline{WR}/\overline{WRL}$ pin output are enabled. $\overline{WRL}$ is used to write-strobe 8 lower bits of the data bus in 16-bit access while $\overline{WR}$ is used to write-strobe 8 bits of the data bus in 8-bit access.
		INT10R		External interrupt request input pin.
8	6	P33	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or when the $\overline{WRH}$ pin output is disabled.
		$\overline{WRH}$		Write strobe output pin for the upper 8 bits of the external data bus. This function is enabled when the external bus is enabled, when the external bus 16-bit mode is selected, and when the $\overline{WRH}$ output pin is enabled.

Pin No.		Pin name	I/O Circuit type*3	Function
QFP100*1	LQFP100*2			
9	7	P34	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or when the hold function is disabled.
		HRQ		Hold request input pin. This function is enabled when both the external bus and the hold function are enabled.
		OUT4		Waveform output pin for output compare.
10	8	P35	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or when the hold function is disabled.
		$\overline{\text{HAK}}$		Hold acknowledge output pin. This function is enabled when both the external bus and the hold function are enabled.
		OUT5		Waveform output pin for output compare.
11	9	P36	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or when the external ready function is disabled.
		RDY		External ready input pin. This function is enabled when both the external bus and the external ready function are enabled.
		OUT6		Waveform output pin for output compare.
12	10	P37	G	General purpose I/O pin. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or when the clock output is disabled.
		CLK		Clock output pin. This function is enabled when both the external bus and clock output are enabled.
		OUT7		Waveform output pin for output compare
13, 14	11, 12	P40, P41	F	General purpose I/O pins. (devices with an S suffix in the part number and or MB90V340E-101)
		X0A, X1A	B	Oscillation pins for sub clock (devices without an S suffix in the part number and or MB90V340E-102)
15	13	V <sub>CC</sub>	—	Power (3.5 V to 5.5 V) input pin
16	14	V <sub>SS</sub>	—	GND pin
17	15	C	K	This is the power supply stabilization capacitor This pin should be connected to a ceramic capacitor with a capacitance greater than or equal to 0.1 $\mu\text{F}$ .
18	16	P42	F	General purpose I/O pin.
		IN6		Trigger input pin for input capture.
		RX1		RX input pin for CAN1 Interface (MB90341E/342E/F342E/F345E only)
		INT9R		External interrupt request input pin

## ■ HANDLING DEVICES

### 1. Preventing latch-up

**CMOS IC may suffer latch-up under the following conditions:**

- A voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between  $V_{CC}$  and  $V_{SS}$  pins.
- The  $AV_{CC}$  power supply is applied before the  $V_{CC}$  voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

For the same reason, also be careful not to let the analog power-supply voltage ( $AV_{CC}$ ,  $AV_{RH}$ ) exceed the digital power-supply voltage.

### 2. Handling unused pins

Leaving unused input terminals open may lead to permanent damage due to malfunction and latch-up; pull up or pull down the terminals through the resistors of 2 k $\Omega$  or more.

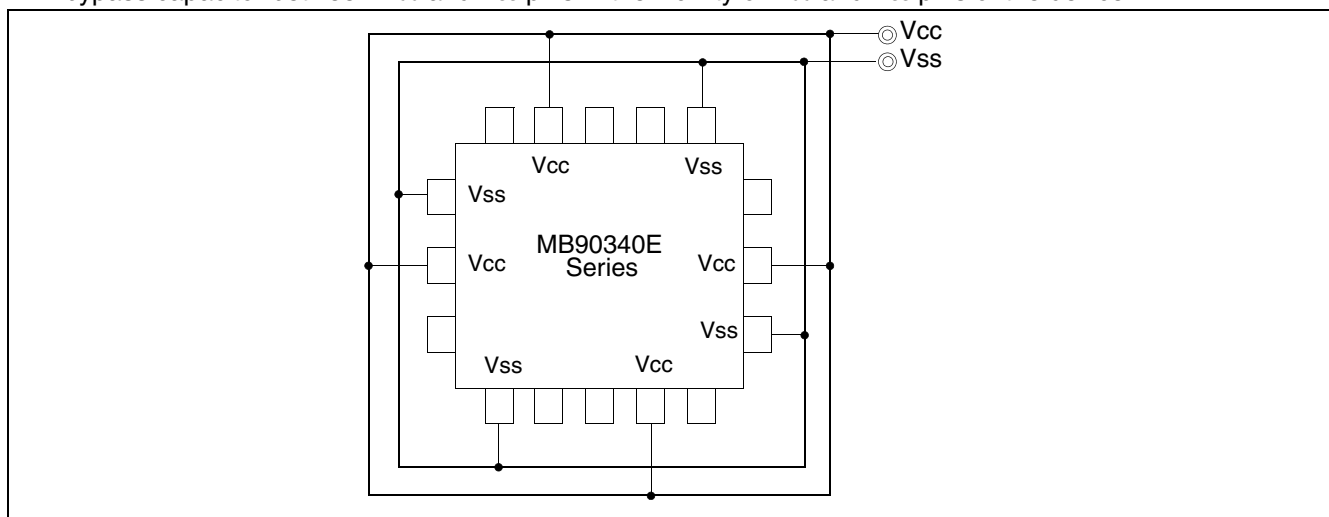

### 3. Power supply pins ( $V_{CC}/V_{SS}$ )

- If there are multiple  $V_{CC}$  and  $V_{SS}$  pins, from the point of view of device design, pins to be of the same potential are connected inside of the device to prevent malfunction such as latch-up.

To reduce unnecessary radiation, prevent malfunctioning of the strobe signal due to the rise of ground level, and observe the standard for total output current, be sure to connect the  $V_{CC}$  and  $V_{SS}$  pins to the power supply and ground externally.

Connect  $V_{CC}$  and  $V_{SS}$  pins to the device from the current supply source at a possibly low impedance.

- As a measure against power supply noise, it is recommended to connect a capacitor of about 0.1  $\mu\text{F}$  as a bypass capacitor between  $V_{CC}$  and  $V_{SS}$  pins in the vicinity of  $V_{CC}$  and  $V_{SS}$  pins of the device.

### 4. Mode Pins (MD0 to MD2)

Connect the mode pins directly to  $V_{CC}$  or  $V_{SS}$  pins. To prevent the device unintentionally entering test mode due to noise, lay out the printed circuit board so as to minimize the distance from the mode pins to  $V_{CC}$  or  $V_{SS}$  pins and to provide a low-impedance connection.

## 5. Sequence for Turning On the Power Supply to the A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply ( $AV_{CC}$ ,  $AV_{RH}$ ,  $AV_{RL}$ ) and analog inputs (AN0 to AN23) after turning-on the digital power supply ( $V_{CC}$ ).

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage does not exceed  $AV_{RH}$  or  $AV_{CC}$  (turning on/off the analog and digital power supplies simultaneously is acceptable).

## 6. Connection of Unused A/D Converter Pins when the A/D Converter is Used

Connect unused pins of A/D converter to  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AV_{RH} = AV_{RL} = V_{SS}$ .

## 7. Crystal Oscillator Circuit

The X0, X1 pins and X0A, X1A pins may be possible causes of abnormal operation. Make sure to provide bypass capacitors via the shortest distance from X0, X1 pins and X0A, X1A pins, crystal oscillator (or ceramic oscillator) and ground lines, and make sure, to the utmost effort, that the oscillation circuit lines do not cross the lines of other circuits. It is highly recommended to provide a printed circuit board art work surrounding X0, X1 pins and X0A, X1A pins with a ground area for stabilizing the operation.

For each of the mass-production products, request an oscillator evaluation from the manufacturer of the oscillator you are using.

## 8. Pull-up/down resistors

The MB90340E Series does not support internal pull-up/down resistors (except for the pull-up resistors built into ports 0 to 3). Use external components where needed.

## 9. Using external clock

To use an external clock, drive the X0 pin and leave the X1 pin open.

## 10. Precautions when not using a sub clock signal

If you do not connect pins X0A and X1A to an oscillator, use pull-down handling on the X0A pin, and leave the X1A pin open.

## 11. Notes on operation in PLL clock mode

If PLL clock mode is selected, the microcontroller attempt to be working with the self-oscillating circuit even when there is no external oscillator or the external clock input is stopped. Performance of this operation, however, cannot be guaranteed.

## 12. Notes on Power-On

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during power-on to 50  $\mu$ s or more (0.2 V to 2.7 V)

### 13. Stabilization of power supply voltage

A sudden change in the supply voltage may cause the device to malfunction even within the  $V_{CC}$  supply voltage operating range. Therefore, the  $V_{CC}$  supply voltage should be stabilized. For reference, the supply voltage should be controlled so that  $V_{CC}$  ripple variations (peak- to-peak values) at commercial frequencies (50 MHz/60 MHz) fall below 10% of the standard  $V_{CC}$  supply voltage and the coefficient of fluctuation does not exceed 0.1 V/ms at instantaneous power switching.

### 14. Port 0 to Port 3 Output During Power-on (External-bus Mode)

As shown below, when the power is turned on in External-Bus mode, there is a possibility that output signal of Port 0 to Port 3 might be unstable irrespective of the reset input.

### 15. Notes on Using the CAN Function

To use the CAN function, please set the DIRECT bit of the CAN Direct Mode Register (CDMR) to 1.

### 16. Flash Security Function (except for MB90F346E)

A security bit is located in the area of the flash memory.

If protection code 01<sub>H</sub> is written in the security bit, the flash memory is in the protected state by security.

Therefore please do not write 01<sub>H</sub> in this address if you do not use the security function.

Refer to following table for the address of the security bit.

	Flash memory size	Address of the security bit
MB90F347E	Embedded 1 Mbit Flash Memory	FE0001 <sub>H</sub>
MB90F342E MB90F349E	Embedded 2 Mbits Flash Memory	FC0001 <sub>H</sub>
MB90F345E	Embedded 4 Mbits Flash Memory	F80001 <sub>H</sub>

### 17. Serial Communication

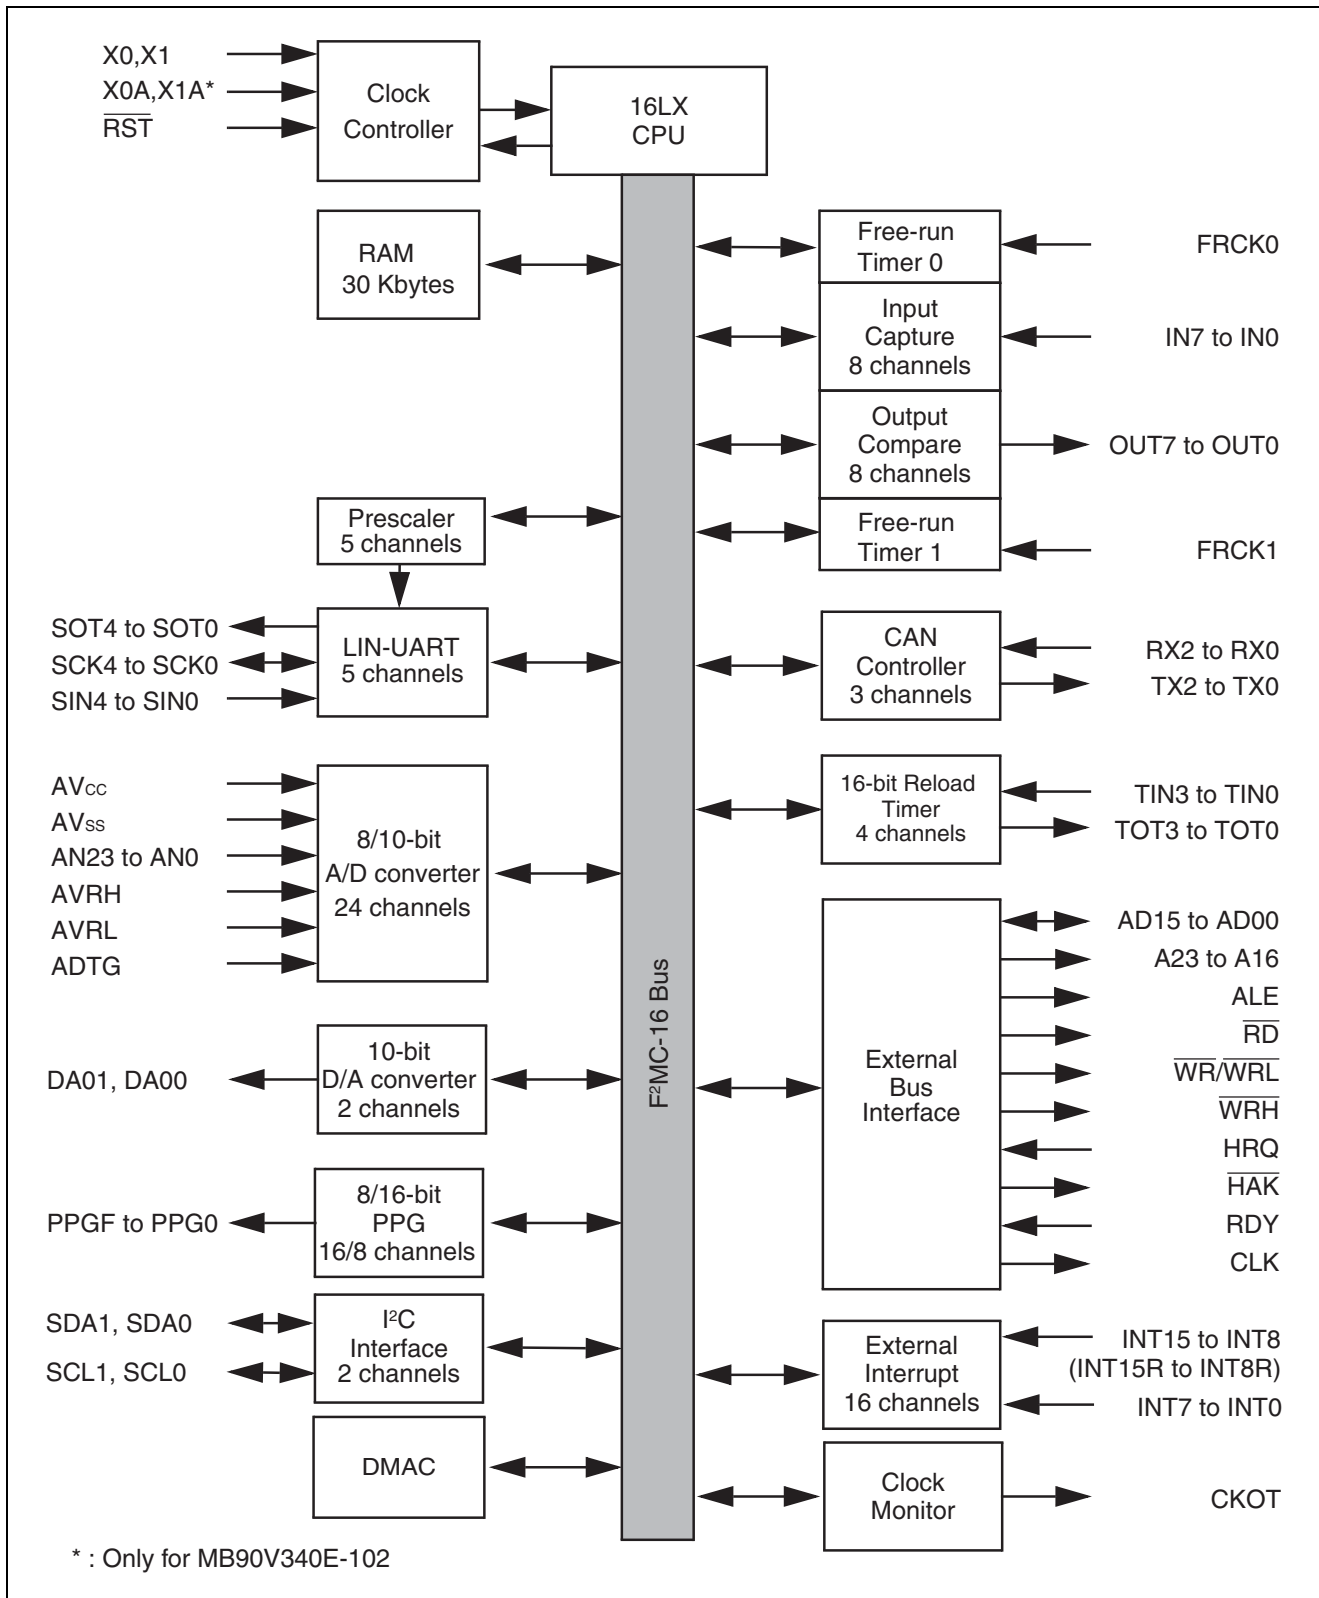

There is a possibility to receive wrong data due to the noise or other causes on the serial communication.

Therefore, design a printed circuit board so as to avoid noise.

Retransmit the data if an error occurs because of applying the checksum to the last data in consideration of receiving wrong data due to the noise.

## MEMORY MAP

# MB90340E Series

Note: An image of the data in the FF bank of ROM is visible in the upper part of bank 00, which makes it possible for the C compiler to use the small memory model. The lower 16 bits of addresses in the FF bank are the same as the lower 16 bits of addresses in the 00 bank so that tables stored in the ROM can be accessed without using the far specifier in the pointer declaration.

For example, when the address 00C000H is accessed, the data at FFC000H in ROM is actually accessed. The ROM area in bank FF exceeds 32 Kbytes, and its entire image cannot be shown in bank 00.

As a result, the image between FF8000H and FFFFFFFH is visible in bank 00, while the image between FF0000H and FF7FFFH is visible only in bank FF.

## ■ CAN CONTROLLERS

The CAN controller has the following features:

- Conforms to CAN Specification Version 2.0 Part A and B
  - Supports transmission/reception in standard frame and extended frame formats
- Supports transmission of data frames by receiving remote frames
- 16 transmission/reception message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 kbps to 2 Mbps (when input clock is at 16 MHz)

N : Unusable

- Notes :
- The peripheral resources sharing the ICR register have the same interrupt level.
  - When two peripheral resources share the ICR register, only one can use Extended Intelligent I/O Service at a time.
  - When either of the two peripheral resources sharing the ICR register specifies Extended Intelligent I/O Service, the other one cannot use interrupts.

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	$V_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
	$AV_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC}$ *2
	AVRH, AVRL	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AVRH$ , $AV_{CC} \geq AVRL$ , $AVRH \geq AVRL$
Input voltage*1	$V_I$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Output voltage*1	$V_O$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Maximum Clamp Current	$I_{CLAMP}$	-4.0	+4.0	mA	*5
Total Maximum Clamp Current	$\Sigma I_{CLAMP} $	—	40	mA	*5
“L” level maximum output current	$I_{OL}$	—	15	mA	*4, *6
“L” level average output current	$I_{OLAV}$	—	4	mA	*4, *7
“L” level maximum overall output current	$\Sigma I_{OL}$	—	100	mA	*4
“L” level average overall output current	$\Sigma I_{OLAV}$	—	50	mA	*4, *8
“H” level maximum output current	$I_{OH}$	—	-15	mA	*4, *6
“H” level average output current	$I_{OHAV}$	—	-4	mA	*4, *7
“H” level maximum overall output current	$\Sigma I_{OH}$	—	-100	mA	*4
“H” level average overall output current	$\Sigma I_{OHAV}$	—	-50	mA	*4, *8
Power consumption	$P_D$	—	450	mW	
Operating temperature	$T_A$	-40	+105	°C	
Storage temperature	$T_{STG}$	-55	+150	°C	

\*1: This parameter is based on  $V_{SS} = AV_{SS} = 0$  V

\*2: Set  $AV_{CC}$  and  $V_{CC}$  to the same voltage. Make sure that  $AV_{CC}$  does not exceed  $V_{CC}$  and that the voltage at the analog inputs does not exceed  $AV_{CC}$  when the power is switched on.

\*3:  $V_I$  and  $V_O$  should not exceed  $V_{CC} + 0.3$  V.  $V_I$  should not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the  $I_{CLAMP}$  rating supersedes the  $V_I$  rating.

\*4: Applicable to pins: P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57, P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0, PA1

\*5: • Applicable to pins: P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57 (Evaluation device : P50 to P55) , P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0 to PA1

- Use within recommended operating conditions.
- Use with DC voltage (current)
- The +B signal should always be applied by using a limiting resistance placed between the +B signal and the microcontroller.
- The value of the limiting resistance should be set so that when the +B signal is applied, the input current to the microcontroller pin does not exceed the rated value, either instantaneously or for prolonged periods.
- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the  $V_{CC}$  pin, and this may affect other devices.

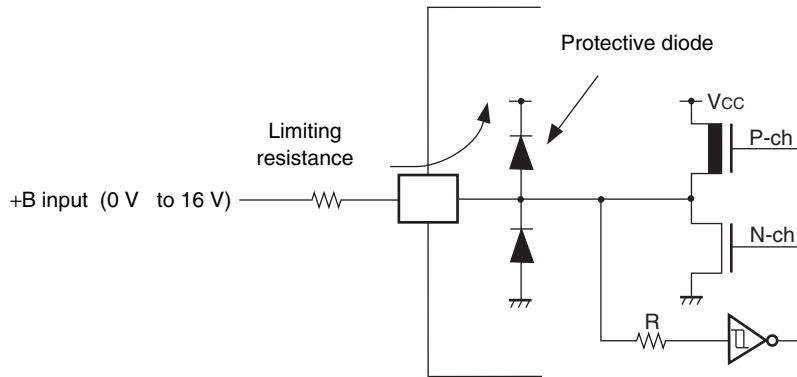

(Continued)

# MB90340E Series

(Continued)

- Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
- Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the power-on reset.
- Care must be taken not to leave the +B input pin open.
- Sample recommended circuits:

- Input/output equivalent circuits

- \*6: The maximum output current is defined as the peak value of the current of any one of the corresponding pins.
- \*7: The average output current is defined as the value of the average current flowing over 100 ms at any one of the corresponding pins.
- \*8: The average total output current is defined as the value of the average current flowing over 100 ms at all of the corresponding pins.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 2. Recommended Operating Conditions

( $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	$V_{CC}, AV_{CC}$	4.0	5.0	5.5	V	Under normal operation
		3.5	5.0	5.5	V	Under normal operation, when not using the A/D converter and not Flash programming.
		4.5	5.0	5.5	V	When External bus is used.
		3.0	—	5.5	V	Maintains RAM data in stop mode
Smoothing capacitor	$C_S$	0.1	—	1.0	$\mu\text{F}$	Use a ceramic capacitor or capacitor of better AC characteristics. Capacitor at the $V_{CC}$ should be greater than this capacitor.
Operating temperature	$T_A$	-40	—	+105	$^{\circ}\text{C}$	

C Pin Connection Diagram

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

## 4. AC Characteristics

### (1) Clock Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	f <sub>c</sub>	X0, X1	3	—	16	MHz	When using an oscillation circuit
			4	—	16	MHz	PLL multiplied by 1 When using an oscillation circuit
			4	—	12	MHz	PLL multiplied by 2 When using an oscillation circuit
			4	—	8	MHz	PLL multiplied by 3 When using an oscillation circuit
			4	—	6	MHz	PLL multiplied by 4 When using an oscillation circuit
			—	—	4	MHz	PLL multiplied by 6 When using an oscillation circuit
	f <sub>CL</sub>	X0A, X1A	—	32.768	100	kHz	When using an external clock*
Clock cycle time	t <sub>CYL</sub>	X0, X1	62.5	—	333	ns	When using an oscillation circuit
		X0, X1	41.67	—	333	ns	When using an external clock
	t <sub>CYLL</sub>	X0A, X1A	10	30.5	—	μs	
Input clock pulse width	P <sub>WH</sub> , P <sub>WL</sub>	X0	10	—	—	ns	Duty ratio is about 30% to 70%.
	P <sub>WHL</sub> , P <sub>WLL</sub>	X0A	5	15.2	—	μs	
Input clock rise and fall time	t <sub>CR</sub> , t <sub>CF</sub>	X0	—	—	5	ns	When using external clock
Internal operating clock frequency (machine clock)	f <sub>CP</sub>	—	1.5	—	24	MHz	When using main clock
	f <sub>CPL</sub>	—	—	8.192	50	kHz	When using sub clock
Internal operating clock cycle time (machine clock)	t <sub>CP</sub>	—	41.67	—	666	ns	When using main clock
	t <sub>CPL</sub>	—	20	122.1	—	μs	When using sub clock

\* : When selecting the PLL clock, the range of clock frequency is limited. Use this product within the range as mentioned in "Relation between the external clock frequency and machine clock frequency".

## Clock Timing

# MB90340E Series

Guaranteed PLL operation range

Guaranteed operation range of MB90340E series

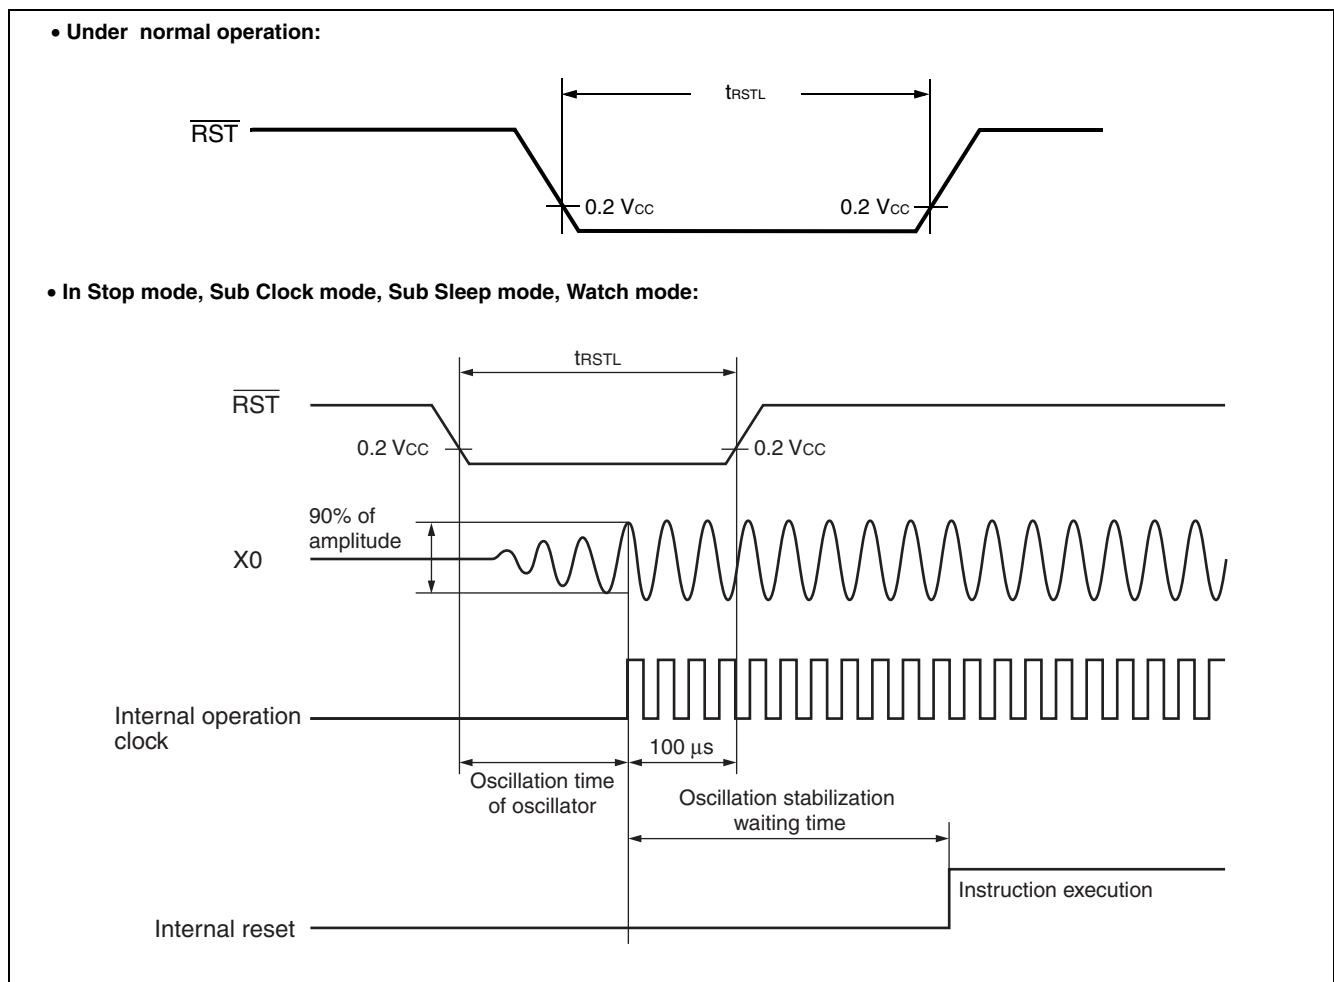

\* : When using a crystal oscillator or ceramic oscillator, the maximum oscillation clock frequency is 16 MHz

## (2) Reset Standby Input

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Pin	Value		Unit	Remarks	
			Min	Max			
Reset input time	$t_{RSTL}$	$\overline{RST}$	500	—	ns	Under normal operation	
			Oscillation time of oscillator* + 100 $\mu\text{s}$		—	$\mu\text{s}$	In Stop mode, Sub Clock mode, Sub Sleep mode and Watch mode
			100	—	$\mu\text{s}$	In Time Timer mode	

\* : The oscillation time of the oscillator is the time it takes for the amplitude of the oscillations to reach 90%. For crystal oscillators, this time is between several ms and several tens of ms, for ceramic oscillators the time is between several hundred  $\mu\text{s}$  and several ms, and for an external clock, the time is 0 ms.

# MB90340E Series

## (3) Power On Reset

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Power on rise time	$t_R$	$V_{CC}$	—	0.05	30	ms	
Power off time	$t_{OFF}$	$V_{CC}$	—	1	—	ms	Waiting time until power-on

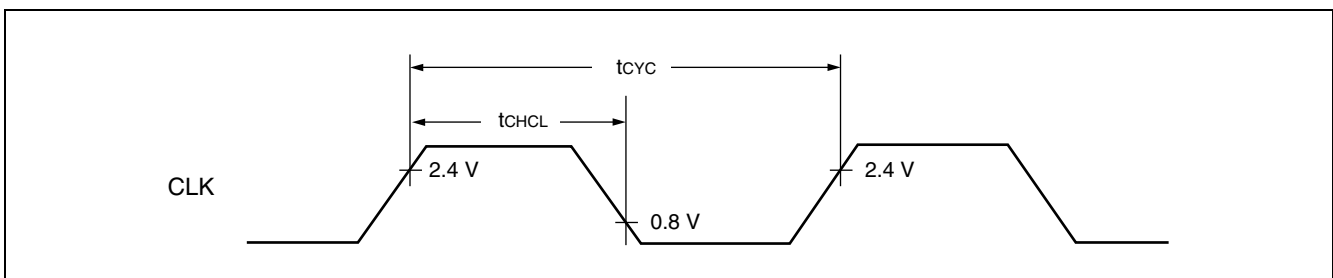

Note : If you change the power supply voltage too rapidly, a power on reset may occur. We recommend that you startup smoothly by restraining voltages when changing the power supply voltage during operation, as shown in the figure below. Perform while not using the PLL clock. However, if voltage drops are within 1 V/s, you can operate while using the PLL clock.

## (4) Clock Output Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $V_{SS} = 0.0\text{ V}$ ,  $f_{CP} \leq 24\text{ MHz}$ )

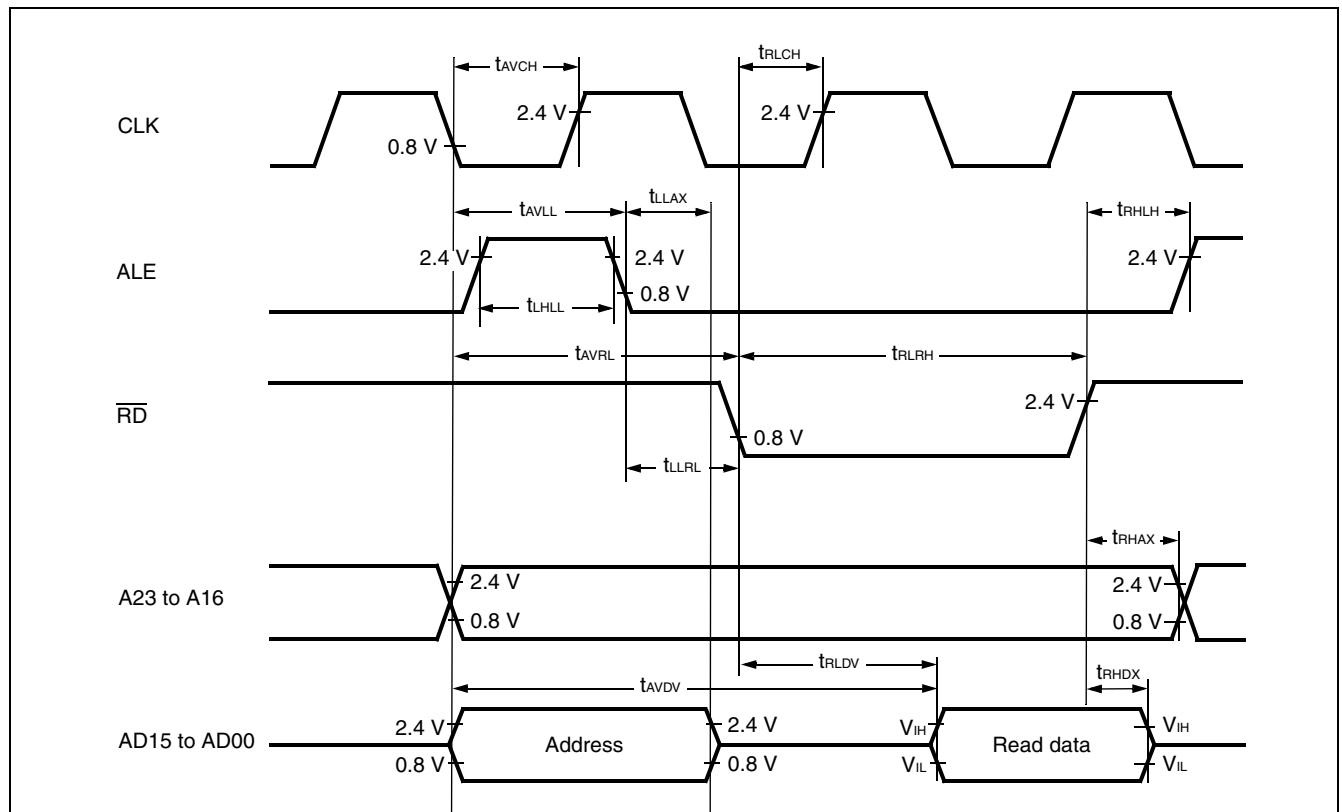

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Cycle time	$t_{CYC}$	CLK	—	62.5	—	ns	$f_{CP} = 16\text{ MHz}$
				41.67	—	ns	$f_{CP} = 24\text{ MHz}$
CLK $\uparrow \rightarrow$ CLK $\downarrow$	$t_{CHCL}$	CLK	—	20	—	ns	$f_{CP} = 16\text{ MHz}$
				13	—	ns	$f_{CP} = 24\text{ MHz}$

## (5) Bus Timing (Read)

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $V_{SS} = 0.0\text{ V}$ ,  $f_{CP} \leq 24\text{ MHz}$ )

# MB90340E Series

## (13) I<sup>2</sup>C Timing

(T<sub>A</sub> = -40°C to +105°C, V<sub>CC</sub> = 5.0 V ± 10%, V<sub>SS</sub> = 0.0 V)

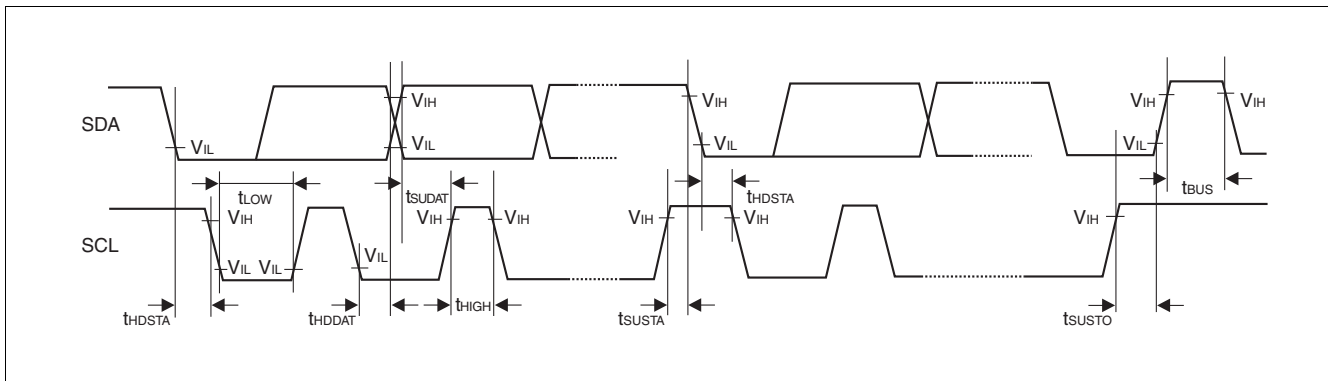

Parameter	Symbol	Condition	Standard-mode		Fast-mode* <sup>1</sup>		Unit
			Min	Max	Min	Max	
SCL clock frequency	f <sub>SCL</sub>	R = 1.7 kΩ, C = 50 pF* <sup>2</sup>	0	100	0	400	kHz
Hold time (repeated) START condition SDA ↓ → SCL ↓	t <sub>HDSTA</sub>		4.0	—	0.6	—	μs
“L” width of the SCL clock	t <sub>LOW</sub>		4.7	—	1.3	—	μs
“H” width of the SCL clock	t <sub>HIGH</sub>		4.0	—	0.6	—	μs
Set-up time (repeated) START condition SCL ↑ → SDA ↓	t <sub>SUSTA</sub>		4.7	—	0.6	—	μs
Data hold time SCL ↓ → SDA ↓ ↑	t <sub>HDDAT</sub>		0	3.45* <sup>3</sup>	0	0.9* <sup>4</sup>	μs
Data set-up time SDA ↓ ↑ → SCL ↑	t <sub>SUDAT</sub>		250	—	100	—	ns
Set-up time for STOP condition SCL ↑ → SDA ↑	t <sub>SUSTO</sub>		4.0	—	0.6	—	μs
Bus free time between a STOP and START condition	t <sub>BUS</sub>	4.7	—	1.3	—	μs	

\*1: For use at over 100 kHz, set the machine clock to at least 6 MHz.

\*2: R,C: Pull-up resistor and load capacitor of the SCL and SDA lines.

\*3: The maximum t<sub>HDDAT</sub> meets the requirement that it does not extend the “L” width (t<sub>LOW</sub>) of the SCL signal.

\*4: A Fast-mode I<sup>2</sup>C-bus device can be used in a Standard-mode I<sup>2</sup>C-bus system, but the requirement t<sub>SUDAT</sub> ≥ 250 ns must then be met.

## 5. A/D Converter

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $3.0\text{ V} \leq AV_{RH} - AV_{RL}$ ,  $V_{CC} = AV_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

Differential nonlinearity error	—	—	—	—	$\pm 1.9$	LSB	
Zero reading voltage	$V_{OT}$	AN0 to AN23	$AV_{RL} - 1.5 \times \text{LSB}$	$AV_{RL} + 0.5 \times \text{LSB}$	$AV_{RL} + 2.5 \times \text{LSB}$	V	
Full scale reading voltage	$V_{FST}$	AN0 to AN23	$AV_{RH} - 3.5 \times \text{LSB}$	$AV_{RH} - 1.5 \times \text{LSB}$	$AV_{RH} + 0.5 \times \text{LSB}$	V	
Compare time	—	—	1.0	—	16500	$\mu\text{s}$	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$
			2.0				$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$
Sampling time	—	—	0.5	—	$\infty$	$\mu\text{s}$	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$
			1.2				$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$
Analog port input current	$I_{AIN}$	AN0 to AN23	-0.3	—	+0.3	$\mu\text{A}$	
Analog input voltage range	$V_{AIN}$	AN0 to AN23	$AV_{RL}$	—	$AV_{RH}$	V	
Reference voltage range	—	$AV_{RH}$	$AV_{RL} + 2.7$	—	$AV_{CC}$	V	
	—	$AV_{RL}$	0	—	$AV_{RH} - 2.7$	V	
Power supply current	$I_A$	$AV_{CC}$	—	3.5	7.5	mA	
	$I_{AH}$	$AV_{CC}$	—	—	5	$\mu\text{A}$	*
Reference voltage current	$I_R$	$AV_{RH}$	—	600	900	$\mu\text{A}$	
	$I_{RH}$	$AV_{RH}$	—	—	5	$\mu\text{A}$	*
Offset between input channels	—	AN0 to AN23	—	—	4	LSB	

\*: If the A/D convertor is not operating, a current when CPU is stopped is applicable ( $V_{CC} = AV_{CC} = AV_{RH} = 5.0\text{ V}$ ).

Note: The accuracy gets worse as  $|AV_{RH} - AV_{RL}|$  becomes smaller.

## 6. Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by the A/D converter.
- Non linearity error : The deviation between the actual conversion characteristics and a line that joins the zero-transition line ( "00 0000 0000" ← → "00 0000 0001" ) to the full-scale transition line ( "11 1111 1110" ← → "11 1111 1111" ) .
- Differential linearity error : Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error : Difference between the actual value and the ideal value. The total error includes zero transition error, full-scale transition error, and linear error.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB (Ideal value)} = \frac{AVRH - AVRL}{1024} \text{ [V]}$$

N : Value of the digital output from the A/D converter

V<sub>OT</sub> (Ideal value) = AVRL + 0.5 LSB [V]

V<sub>FST</sub> (Ideal value) = AVRH - 1.5 LSB [V]

V<sub>NT</sub> : A voltage at which the digital output transitions from (N - 1)<sub>H</sub> to N<sub>H</sub>.

(Continued)

(Continued)

$$\text{Non linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

N : Value of the digital output from the A/D converter

V<sub>OT</sub> : Voltage at which digital output transits from “000<sub>H</sub>” to “001<sub>H</sub>.”

V<sub>FST</sub> : Voltage at which digital output transits from “3FE<sub>H</sub>” to “3FF<sub>H</sub>.”

## 7. Notes on A/D Converter Section

Use the device with external circuits of the following output impedance for analog inputs :

Recommended output impedance of external circuits are : Approx. 1.5 k $\Omega$  or lower ( $4.0\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$ ,  
sampling period = 0.5  $\mu\text{s}$ )

If an external capacitor is used, in consideration of the capacitive voltage dividing effect between the external capacitor and the internal on-chip capacitor, it is recommended that the capacitance of the external capacitor be several thousand times greater than the capacitance of the internal capacitor.

If the output impedance of the external circuit is too high, a sampling period for an analog voltage may be insufficient.

- Analog input circuit model

Note : Use the values in the figure only as a guideline.

## 8. Flash Memory Program/Erase Characteristics

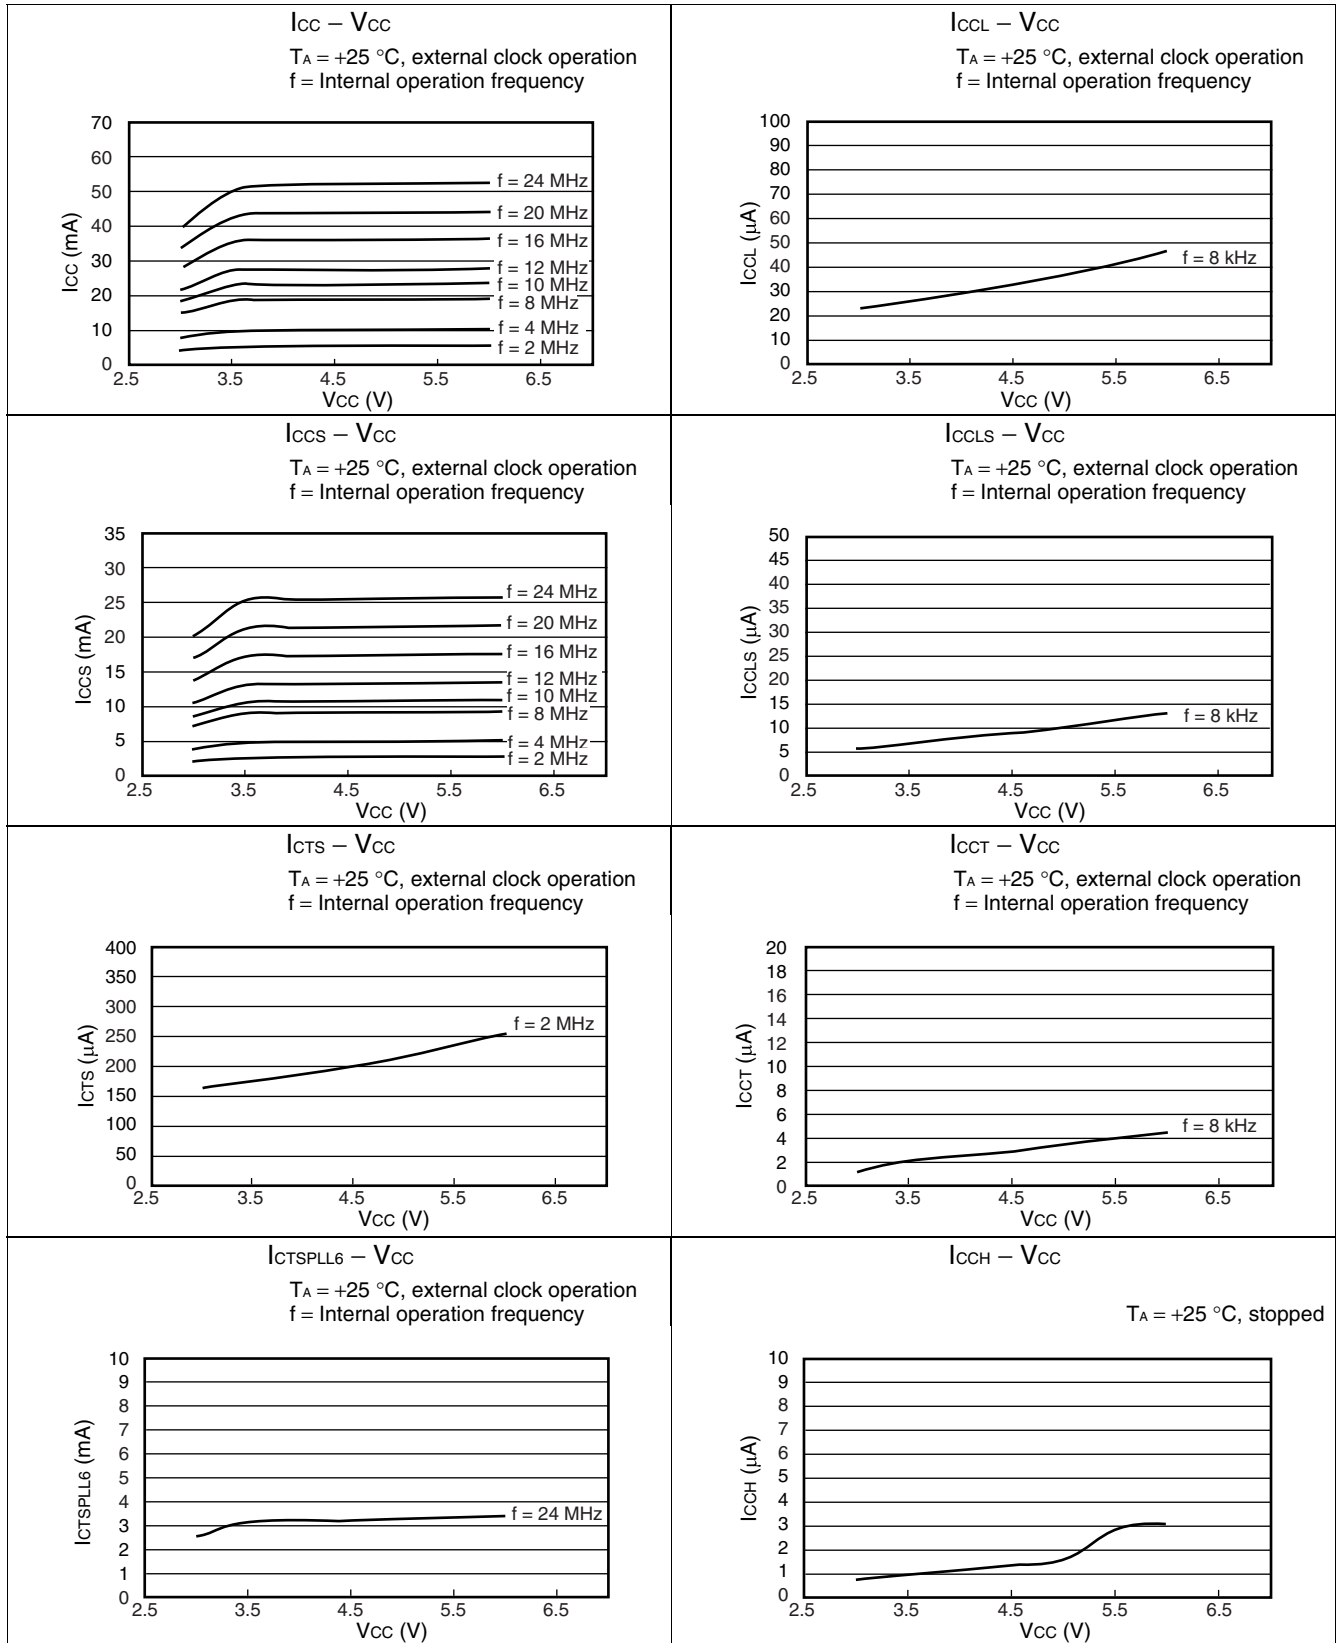

Parameter	Conditions	Value			Unit	Remarks
		Min	Typ	Max		
Sector erase time	T <sub>A</sub> = +25 °C V <sub>CC</sub> = 5.0 V	—	1	15	s	Excludes programming prior to erasure
Chip erase time		—	9	—	s	Excludes programming prior to erasure
Word (16-bit width) programming time		—	16	3600	μs	Except for the over head time of the system
Program/Erase cycle	—	10000	—	—	cycle	
Flash Data Retention Time	Average T <sub>A</sub> = +85 °C	20	—	—	year	*

\* : This value was converted from the results of evaluating the reliability of the technology (using Arrhenius equation to translate high temperature measurements into normalized value at +85 °C) .

## PACKAGE DIMENSIONS

<p>100-pin plastic LQFP</p>  <p>(FPT-100P-M20)</p>	Lead pitch	0.50 mm
	Package width × package length	14.0 mm × 14.0 mm
	Lead shape	Gullwing
	Sealing method	Plastic mold
	Mounting height	1.70 mm Max
	Weight	0.65 g
	Code (Reference)	P-LFQFP100-14×14-0.50

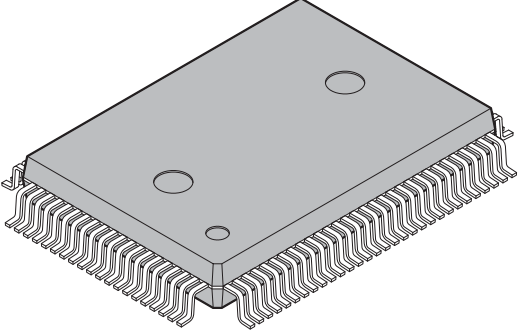

Please check the latest package dimension at the following URL.

## ■ MAIN CHANGES IN THIS EDITION

Page	Section	Change Results
—	—	Deleted the part numbers; MB90F343E(S), MB90F343CE(S)
51	<b>■ ELECTRICAL CHARACTERISTICS</b> 1. Absolute Maximum Ratings	Added “*6” in remark for “L” level maximum output current and “H” level maximum output current. Added “*7” in remark for “L” level average output current and “H” level average output current. Added “*8” in remark for “L” level average overall output current and “H” level average overall output current.
52		Added as follows. “*6: The maximum output current is defined as the peak value of the current of any one of the corresponding pins.” “*7: The average output current is defined as the value of the average current flowing over 100 ms at any one of the corresponding pins.” “*8: The average total output current is defined as the value of the average current flowing over 100 ms at all of the corresponding pins.”

The vertical lines marked in the left side of the page show the changes.

# MB90340E Series

## FUJITSU SEMICONDUCTOR LIMITED

Nomura Fudosan Shin-yokohama Bldg. 10-23, Shin-yokohama 2-Chome,

Kohoku-ku Yokohama Kanagawa 222-0033, Japan

Tel: +81-45-415-5858

### All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU SEMICONDUCTOR device; FUJITSU SEMICONDUCTOR does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU SEMICONDUCTOR assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU SEMICONDUCTOR or any third party or does FUJITSU SEMICONDUCTOR warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU SEMICONDUCTOR assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU SEMICONDUCTOR will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
