## Hex Buffer With Enable

The MC10188 is a high-speed hex buffer with a common Enable input. When Enable is in the high state, all outputs are in the low state. When Enable is in the low state, the outputs take the same state as the inputs.

- Power Dissipation = 180 mW typ/pkg (No Load)
- Propagation Delay = 2.0 ns typ (B – Q)  
2.5 ns typ (A – Q)

Pin assignment is for Dual-in-Line Package.  
For PLCC pin assignment, see the Pin Conversion Tables on page 18 of the ON Semiconductor MECL Data Book (DL122/D).

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
