

Low Power, High Slew Rate, Wide Bandwidth, JFET Input Operational Amplifiers

Quality bipolar fabrication with innovative design concepts are employed for the MC33181/2/4, MC34181/2/4 series of monolithic operational amplifiers. This JFET input series of operational amplifiers operates at 210 μA per amplifier and offers 4.0 MHz of gain bandwidth product and 10 V/ μs slew rate. Precision matching and an innovative trim technique of the single and dual versions provide low input offset voltages. With a JFET input stage, this series exhibits high input resistance, low input offset voltage and high gain. The all NPN output stage, characterized by no deadband crossover distortion and large output voltage swing, provides high capacitance drive capability, excellent phase and gain margins, low open loop high frequency output impedance and symmetrical source/sink AC frequency response.

The MC33181/2/4, MC34181/2/4 series of devices are specified over the commercial or industrial/vehicular temperature ranges. The complete series of single, dual and quad operational amplifiers are available in the plastic DIP as well as the SOIC surface mount packages.

- Low Supply Current: 210 μA (Per Amplifier)
- Wide Supply Operating Range: $\pm 1.5\text{ V}$ to $\pm 18\text{ V}$
- Wide Bandwidth: 4.0 MHz
- High Slew Rate: 10 V/ μs
- Low Input Offset Voltage: 2.0 mV
- Large Output Voltage Swing: -14 V to $+14\text{ V}$ (with $\pm 15\text{ V}$ Supplies)
- Large Capacitance Drive Capability: 0 pF to 500 pF
- Low Total Harmonic Distortion: 0.04%
- Excellent Phase Margin: 67°
- Excellent Gain Margin: 6.7 dB
- Output Short Circuit Protection
- Offered in New TSSOP Package Including the Standard SOIC and DIP Packages

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Supply Voltage (from V_{CC} to V_{EE})	V_S	+36	V
Input Differential Voltage Range	V_{IDR}	Note 1	V
Input Voltage Range	V_{IR}	Note 1	V
Output Short Circuit Duration (Note 2)	t_{SC}	Indefinite	sec
Operating Junction Temperature	T_J	+150	°C
Storage Temperature Range	T_{stg}	-60 to +150	°C

NOTES: 1. Either or both input voltages should not exceed the magnitude of V_{CC} or V_{EE} .
 2. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded (see Figure 1).
