

## Description

The MIM-3xx7K2 is miniaturized infrared receivers for remote control and other applications requiring improved ambient light rejection.

The separate PIN diode and preamplifier IC are assembled on a single leadframe.

The epoxy package contains a special IR filter.

This module has excellent performance even in disturbed ambient light applications and provides protection against uncontrolled output pulses.

**CAUTION ( When use and storage of this device )**

- 1. Store and use where there is no force causing transformation or change in quality .
- 2. Store and use where there is no corrosive gas or sea(salt) breeze .
- 3. Store and use where there is no extreme humidity .
- 4. Solder the lead-pin within the condition of ratings. After soldering do not add extra force .
- 5. Do not wash this device . Wipe the stains of diode side with a soft cloth. You can use the solvent , ethylalcohol or methylalcohol or isupropylene only .
- 6. To prevent static electricity damage to the Pre-AMP make sure that the human body , the soldering iron is connected to ground before using .
- 7. Put decoupling device between Vcc and GND for reduce the noise from power supply line .
- 8. The performance of remote-control system depends on environments condition and ability of periferal parts. Customer should evaluate the performance as total system in those conditions after system up with components such as commander , micon and this receiver module .
