AlGaAs LASER DIODES

TYPE
NAME

ML60114R, ML64114R

DISCRIPTION

ML6XX14 series are high power AlGaAs semiconductor laser diodes which provides a stable, single transverse mode oscillation with emission wavelength of 785nm and standard light output of 50mW.

ML6XX14 are produced by the MOCVD crystal growth method which is excellent in mass production and characteristics uniformity. This is a high - performance, highly reliable, and long life semiconductor laser.

FEATURES

- Output 50mW (CW) 60mW (pulse)
 - Short astigmatic distance
 - Built - in monitor photodiode
 - MQW* active layer
- * : Multiple Quantum Well.

APPLICATION

Optical disc memory (rewritable, write once)

ABSOLUTE MAXIMUM RATINGS (Note 1)

Symbol	Parameter	Conditions	Ratings	Unit
Po	Light output power	CW	60	mW
		Pulse (Note2)	70	
VRL	Reverse voltage (Laser diode)	—	2	V
VRD	Reverse voltage (photodiode)	—	30	V
IFD	Forward current (photodiode)	—	10	mA
Tc	Case temperature	—	-40~+60	°C
Tstg	Storage temperature	—	-55~+100	°C

Note 1 : Duty less than 50%, plus width less than 1 μs

2 : The maximum rating means the limitation over which the laser should not be operated even instant time, and this does not mean the guarantee of its lifetime.
