

## 7.5-30GHz Frequency Multiplier

GaAs Monolithic Microwave IC

*preliminary*

### Description

The MUX-PO9824 is a frequency multiplier by 4 monolithic circuit.

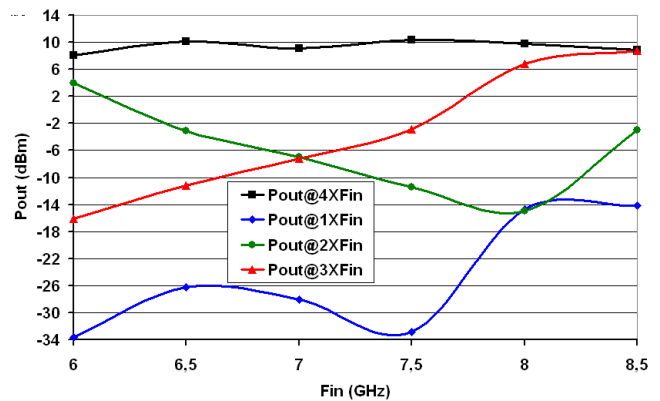

It is designed for a wide range of applications, from military to commercial communication systems. The backside of the chip is both RF and DC grounds. This helps simplify the assembly process.

The circuit is manufactured with a P-HEMT process, 0.25 $\mu$ m gate length, via holes through the substrate, air bridges and electron beam gate lithography.

### Main Features

- Broadband performance : 6.25-8.25 GHz
- 11dBm output power for +12dBm input power
- DC power consumption, 75mA @ 3.5V (with RF)
- Chip size : 2.02 x 1.17 x 0.10 mm
