### ■ TYPICAL APPLICATION AND TEST CIRCUIT

#### **■ OSCILLATION PREVENTION**

Put in series a  $1\Omega$  resistor and a 0.22  $\mu$ F capacitor on parallel to load, if the load is speaker. Recommend putting in parallel between pin 4 and pin 7, 0.1  $\mu$ F and more than 100  $\mu$ F capacitors with good high frequency characteristics near to the ground and supply voltage pins on parallel.
