

AUDIO PROCESSOR

■ GENERAL DESCRIPTION

The **NJW1142** is a sound processor includes all of the functions required to process the audio signal for TV, such as tone control, balance, volume, mute, and AGC functions.

Also the **NJW1142** performs eala (NJRC Original Surround) which is regenerated 3D surround sound with only two speakers.

All of the internal status and variables are controlled by I²C BUS interface.
