# **30 V, 2 A, Low V<sub>CE(sat)</sub> PNP Transistor**

ON Semiconductor's e<sup>2</sup>PowerEdge family of low  $V_{CE(sat)}$  transistors are miniature surface mount devices featuring ultra low saturation voltage ( $V_{CE(sat)}$ ) and high current gain capability. These are designed for use in low voltage, high speed switching applications where affordable efficient energy control is important.

Typical application are DC–DC converters and power management in portable and battery powered products such as cellular and cordless phones, PDAs, computers, printers, digital cameras and MP3 players. Other applications are low voltage motor controls in mass storage products such as disc drives and tape drives. In the automotive industry they can be used in air bag deployment and in the instrument cluster. The high current gain allows e<sup>2</sup>PowerEdge devices to be driven directly from PMU's control outputs, and the Linear Gain (Beta) makes them ideal components in analog amplifiers.

• These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

### MAXIMUM RATINGS (T<sub>A</sub> = 25°C)

| Rating                         | Symbol           | Max  | Unit |
|--------------------------------|------------------|------|------|
| Collector-Emitter Voltage      | V <sub>CEO</sub> | -30  | Vdc  |
| Collector-Base Voltage         | V <sub>CBO</sub> | -50  | Vdc  |
| Emitter-Base Voltage           | V <sub>EBO</sub> | -5.0 | Vdc  |
| Collector Current – Continuous | Ι <sub>C</sub>   | -1.0 | А    |
| Collector Current - Peak       | I <sub>CM</sub>  | -2.0 | А    |

#### THERMAL CHARACTERISTICS

| Characteristic                                       | Symbol                            | Max            | Unit  |
|------------------------------------------------------|-----------------------------------|----------------|-------|
| Total Device Dissipation<br>$T_A = 25^{\circ}C$      | P <sub>D</sub> (Note 1)           | 310            | mW    |
| Derate above 25°C                                    |                                   | 2.5            | mW/°C |
| Thermal Resistance,<br>Junction to Ambient           | $R_{\theta JA}$ (Note 1)          | 403            | °C/W  |
| Total Device Dissipation<br>$T_A = 25^{\circ}C$      | P <sub>D</sub> (Note 2)           | 710            | mW    |
| Derate above 25°C                                    |                                   | 5.7            | mW/°C |
| Thermal Resistance,<br>Junction to Ambient           | $R_{\theta JA}$ (Note 2)          | 176            | °C/W  |
| Total Device Dissipation<br>(Single Pulse < 10 sec.) | P <sub>Dsingle</sub><br>(Note 3)  | 575            | mW    |
| Junction and Storage<br>Temperature Range            | T <sub>J</sub> , T <sub>stg</sub> | –55 to<br>+150 | °C    |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.
