NTE1510 Integrated Circuit 5-Step LED Driver for Linear Scale

Description:

The NTE1510 is an integrated circuit in an 8-Lead SIP type package designed for use in level meter applications. This device is capable of driving 5 LEDs to create a bar-type display. In accordance with the input level, the uppermost LED brightness varies to form a linear indicator, making the NTE1510 ideal for use in signal meters and VU meters. A low-voltage reference power supply is built-in, so that the only external components required are LEDs, resistors, and capacitors.

Features:

- Bar-Type Display of Input Level using 5 LEDs
- The Uppermost LED Brightness Varies Linearly With Respect to the Input Level Resulting in a High-Resolution Display with No Radiation.
- Built-In Reference Supply
- By Changing the External Reference Values, the LED Brightness can be Adjusted
- Wide Range of Supply Voltages: $V_{CC} = 4V$ to $18V$
- High Input Impedance: $I_{IN} = 100nA$ Typ

Applications:

- Signal Meters
- VU Meters
- Tuning Meters
- General Purpose Display Applications
